

How to fix UNTRUSTED_CERT_TITLE error on Mac

When users reinstall macOS, they may encounter a UNTRUSTED_CERT_TITLE error. Let's find out how to fix this error with TipsMake.

Macintosh operating system, also known as macOS, is the official Apple designed operating system for Mac computers. It is based on Unix operating system. The coding programs are based on technology developed between 1977 and 1985 at NeXT, a company founded by Steve Jobs before Apple was born.

When users reinstall macOS, they may encounter a UNTRUSTED_CERT_TITLE error

What causes UNTRUSTED_CERT_TITLE error?

Error UNTRUSTED_CERT_TITLE on Mac

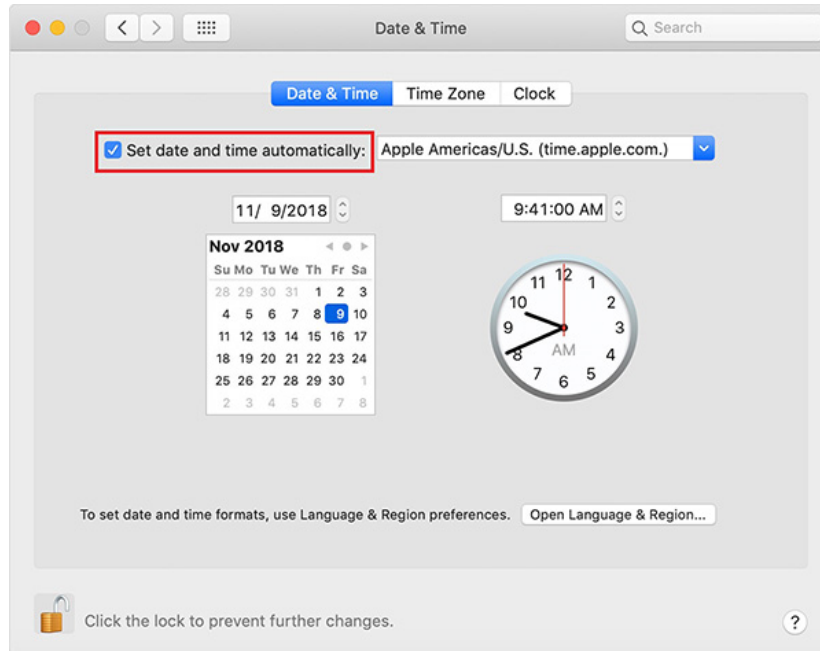

The main cause of this problem is the incorrect date and time settings on the system. The following are methods that can resolve this error.

1. Change the date and time settings in Settings

You can use this method if you are still using the old macOS operating system.

1. From the Apple menu select **System Preferences** .
2. Select **Date & Time** .
3. Click on **the lock icon** and type the **name + admin password** .
4. Click **Date & Time** and set the time manually.
5. Uncheck **Set date and time automatically** and select today's date on the calendar.

6. Rotate the clock to match the current time, then press **Save** .
7. Now install on your operating system, see if the error persists or not.

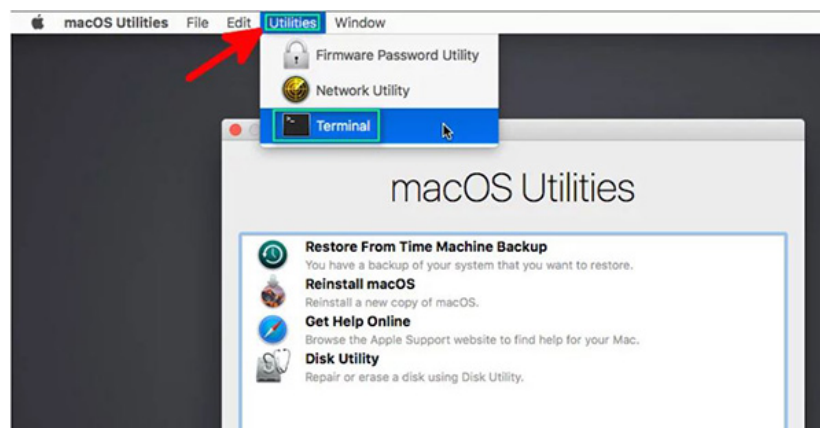

Uncheck the automatic time setting

2. Change the date and time from Terminal

Use this method if you no longer have access to the old version of macOS.

1. Open **Utilities** , select **Terminal** .

Open Terminal from Utilities

2. Type the following command and press Enter:

```
date
```

This command will display the current date and time on the system. It might be pushed back to 2001 for some reason, so reinstall it on time.

To do this, type the following command and press Enter:

```
date -u [month][day][hour][minute][year]
```

A 2-digit sequence based on UTC can be replaced with square brackets. As shown below, this is the current time when you type that command. UTC is used instead of other time zones to avoid trouble. Just type it exactly like this:

```
date -u 1030011519
```

Check the time again by retype the first command.
