

How to fix Windows 10 activation code 0x8007007B

Some users have reported encountering Windows 10 activation code 0x8007007B after installing the latest updates on the PC. To fix Windows 10 this problem, today's article will mention some methods that can help you fix the error.

Some users have reported encountering Windows 10 activation code **0x8007007B** after installing the latest updates on the PC:

We can't activate Windows on this device as we can't connect to your organization.

Due to this problem, they faced problems related to the activation process of Windows operating system. To [fix Windows 10](#) this problem, today's article will mention some methods that can help you fix the error.

1. Run the slmgr.vbs command

Slmgr.vbs is a command line licensing tool. This is a visual basic script used to configure licensing in Windows and also helps you see the licensing status of a Windows 10/8/7 installation.

To execute slmgr.vbs, you need to open Command Prompt with admin rights.

First, run the following command:

```
slmgr.vbs /dlv
```

If the result is **GVLK**, then you know that the product has been activated through Volume licensing.

Next, execute the following command:

```
slmgr.vbs -ipk XXXXX-XXXXX-XXXXX-XXXXX-XXXXX
```

This command will install the product key.

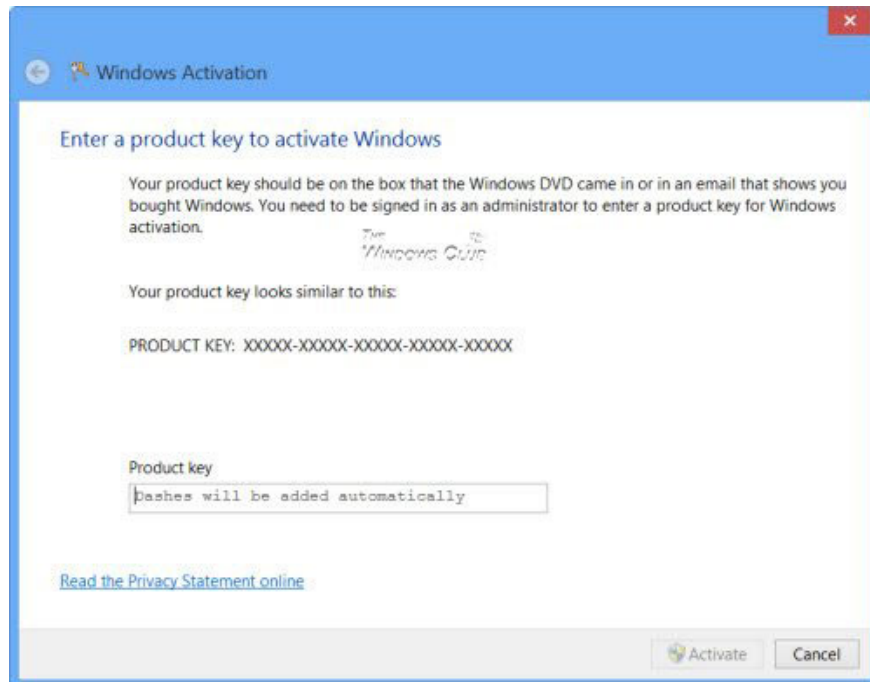

In the Command Prompt, you need to replace the letter **XX** with the number associated with the product key.

Next, in the same Command Prompt window, execute the command:

```
slmgr.vbs -ato
```

This command will activate the copy of Windows.

2. Use the Slui command 3

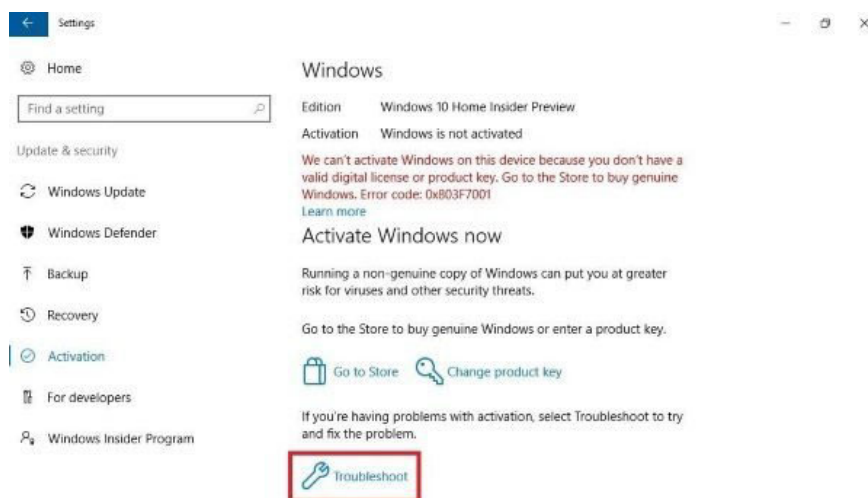

Use the Slui command 3

You can also use **slui.exe** to activate Windows as follows:

1. Right-click on the **Start** button and select the **Run** option .
2. In the dialog box, enter **Slui 3** and press the Enter key.
3. Click **Yes** button if UAC appears on the screen.
4. Enter the 25-digit product key and then click the **Next** button .

After activating the product key, restart the Windows 10 device.

3. Run Activation Troubleshooter

Use the Slui command 3

Activation Troubleshooter Windows 10 helps you identify the most common activation issues on Windows operating systems. To enable it, you can follow these steps:

1. Open **Windows Settings** with the shortcut `Win + I`
2. Select **Update & Security**.
3. On the left, scroll and select the **Activation** button .
4. Scroll to the right and click on the **Troubleshoot** link .

You may have to wait a while until the troubleshooting process is complete. Then restart your Windows 10 PC and check if the error code 0x8007007B still appears.

4. Contact Microsoft support

Unfortunately, if none of the above work, you can try contacting Microsoft support. Tell them about the error code and ask them to change your product key.
