

How to fix Windows 10 app error forgot saved password

Microsoft has said that quite a few Windows 10 applications including Outlook have problems that cause them to forget the user's saved passwords after updating to Windows 10 2004. Here's how to temporarily fix the forgotten password error of some Windows 10 apps.

Currently, Microsoft is working to fix this problem in subsequent updates.

According to Microsoft, the problem lies in the scheduled tasks that are created using the Services For User option of the Task Scheduler. Therefore, the temporary solution is to disable these tasks.

To temporarily resolve the issue, you'll need access to **Windows PowerShell (Admin)**. You can do this by right-clicking on the **Start** button then selecting **Windows PowerShell (Admin)**. Or you can left-click the **Start** button then type **Windows PowerShell** on your keyboard. In the **Windows Search** window that appears, select "**Run as Administrator**".

Next, copy the command below and paste it into the **Windows PowerShell** window, then press **Enter** to execute:

```
Get-ScheduledTask | foreach { If ([xml](Export-ScheduledTask -TaskName $_.TaskName
```

After executing the command, **Windows PowerShell** will display the scheduled tasks. You need to log these tasks and disable them using the **Windows Task Scheduler** follow these steps:

1. Click the Start button then enter **Task Scheduler** and open the **Task Scheduler** application

2. Locate the task in **Windows (HP Customer participation)** and other tasks that **Windows PowerShell** finds out
3. Right-click each task and select **Disable**
4. After that, you need to restart your computer to complete the adjustment

Once your computer reboots, you'll need to re-enter your passwords again for Windows to save them.
