Wait a moment for WinRAR to fix the error.

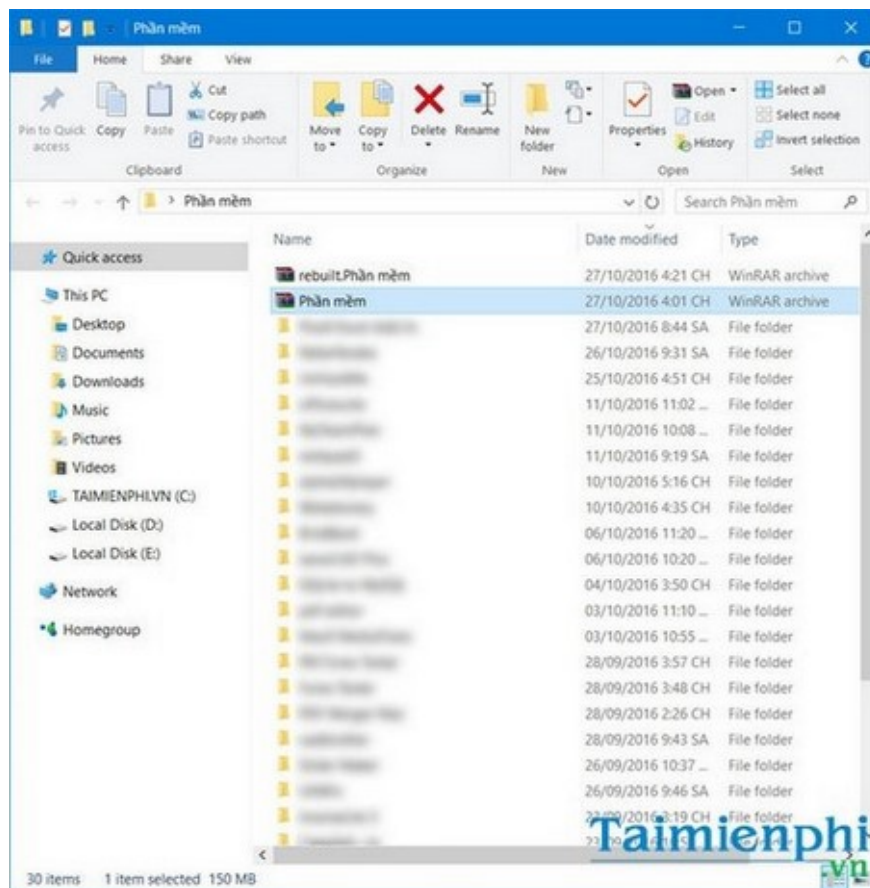

Click **OK** to start the process of detecting corrupted files and starting to repair.

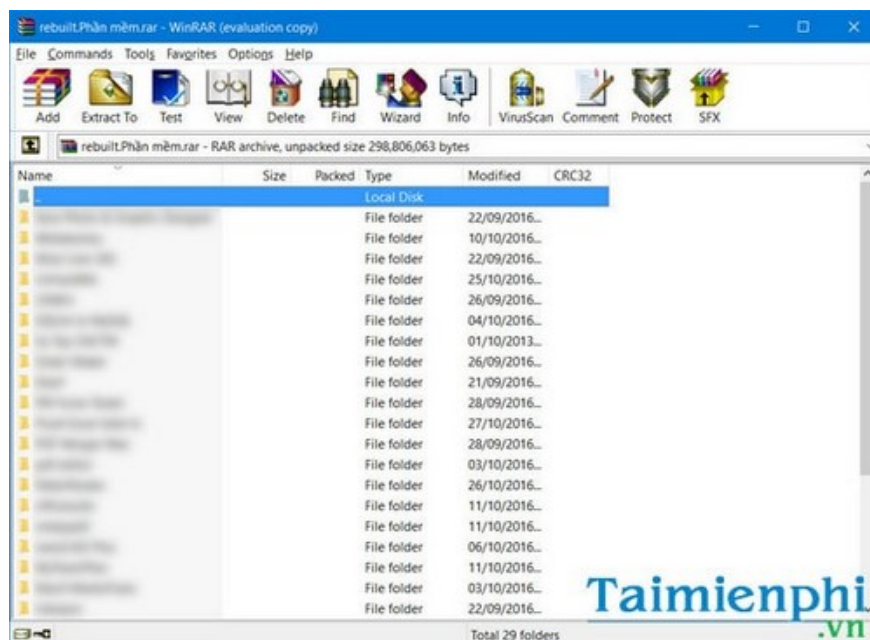

Step 5: Finally, click **Commands > Extract without confirmation** to extract the file again and see the result.

Click on **Commands > Extract without confirmation**

You will see a rebuilt file appear. This is the repaired file.

If the RAR file is corrupted when unzipping, you can try the Repair Archive feature on WinRAR or use specialized software like **RAR Repair Tool** to fix it. However, if the file is too large or badly damaged, the recovery ability will be low.
