

How to fix Working On It on File Explorer Windows 10

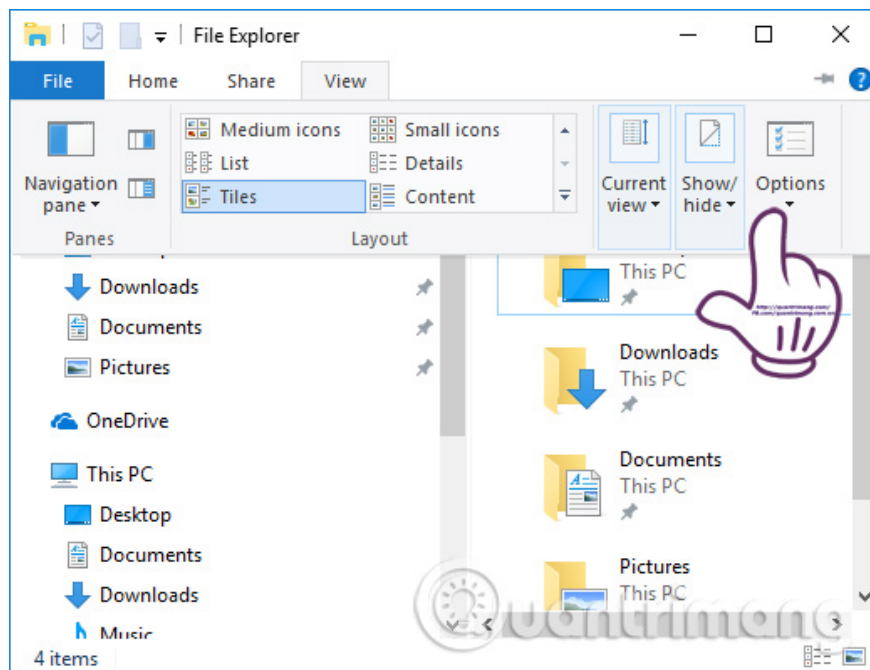

The Quick access area is always opened first on File Explorer. However, if Quick access is slow, it will cause File Explorer to crash.

On Windows 10 computers when opening the File Explorer application, the Quick access area will always be opened first. This is the area that stores all folders, the most recent and frequently opened data. The list of Quick access will be continuously updated as we open File Explorer.

However, there are quite a few cases where Quick access works inefficiently, thereby causing File Explorer errors. The File Explorer application will fall into a slow state, or hang and include a Working on it notification on the interface. The application will stop working for a while and then display the data, or in many cases stop completely. If File Explorer on your Windows 10 machine regularly makes Working On It errors, try the fix in the article below.

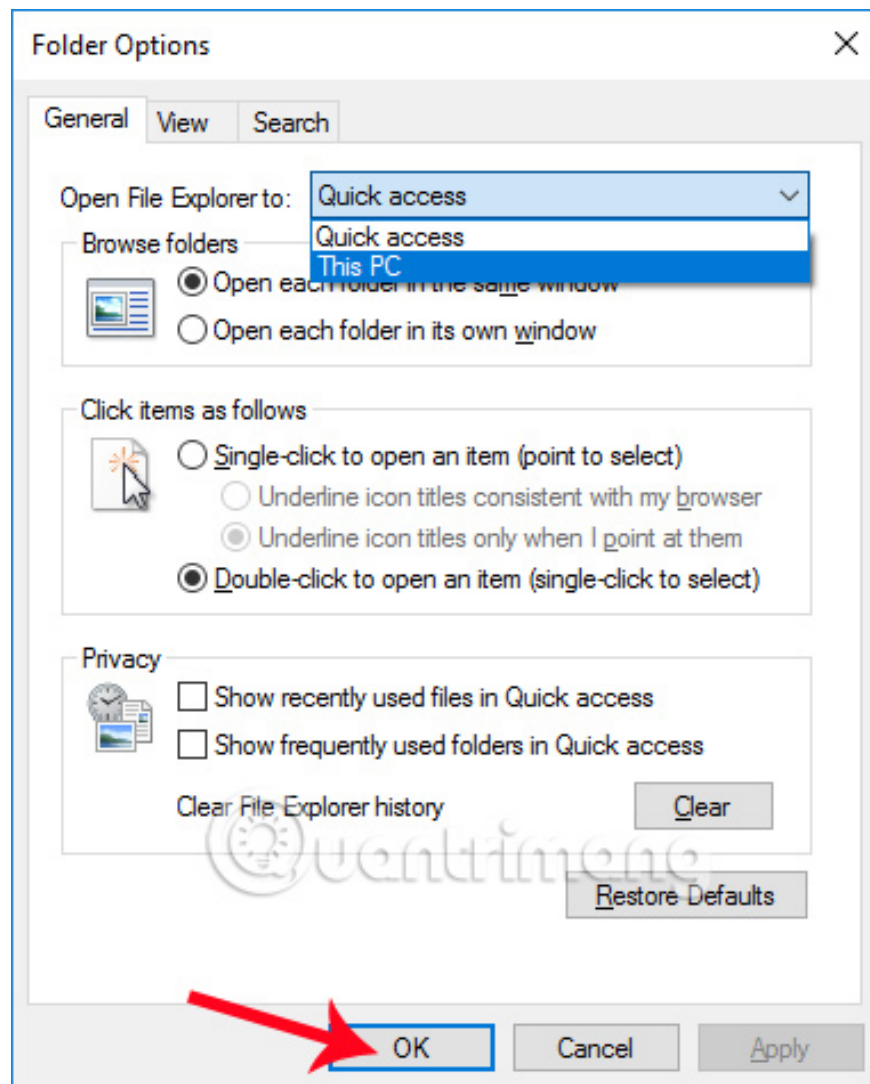

Step 1:

First, start File Explorer on your computer. At this interface, click on the **View tab** and then click on **Options**.

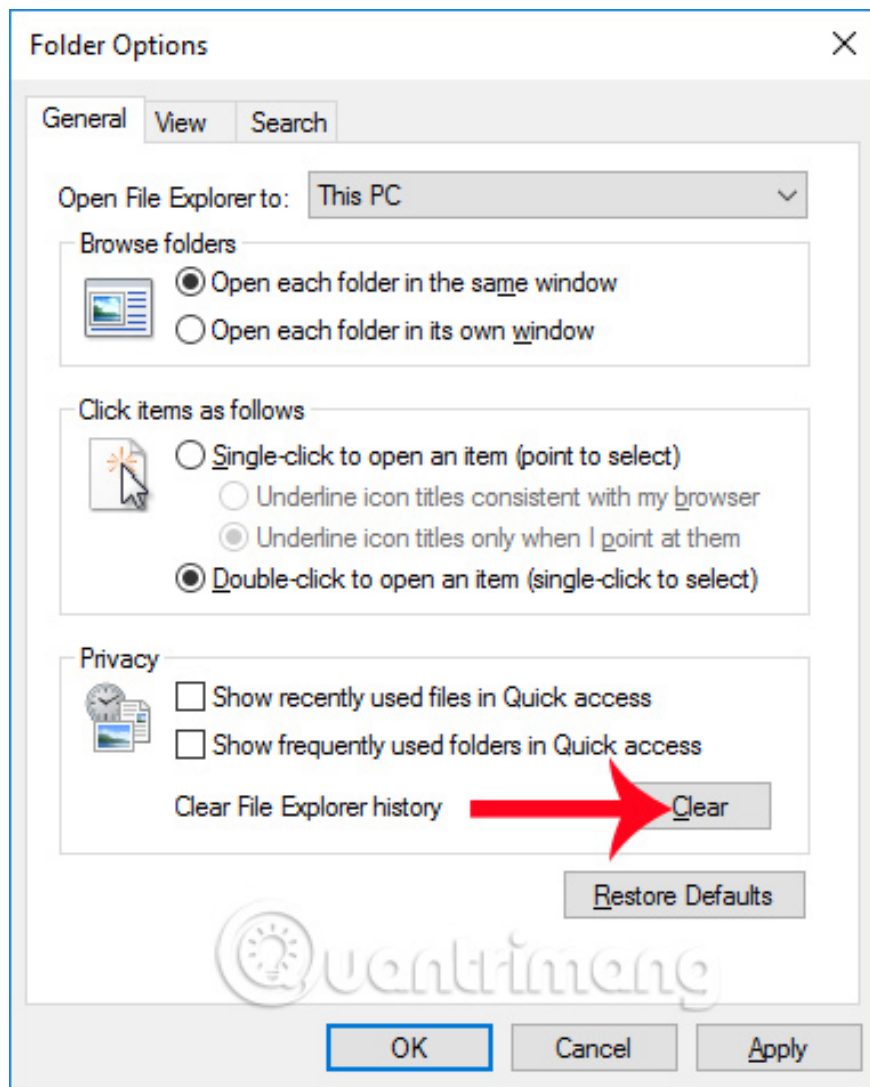

Step 2:

The Folder Options dialog box appears. At **Open File Explorer** to click the drop down arrow and select **This PC** . So File Explorer will be enabled in This PC instead of accessing Quick access immediately.

Step 3:

Also in the Folder Options dialog box, we click on the **Clear** button in the Privacy section to delete the data access history, the folder is saved by File Explorer, when users use it.

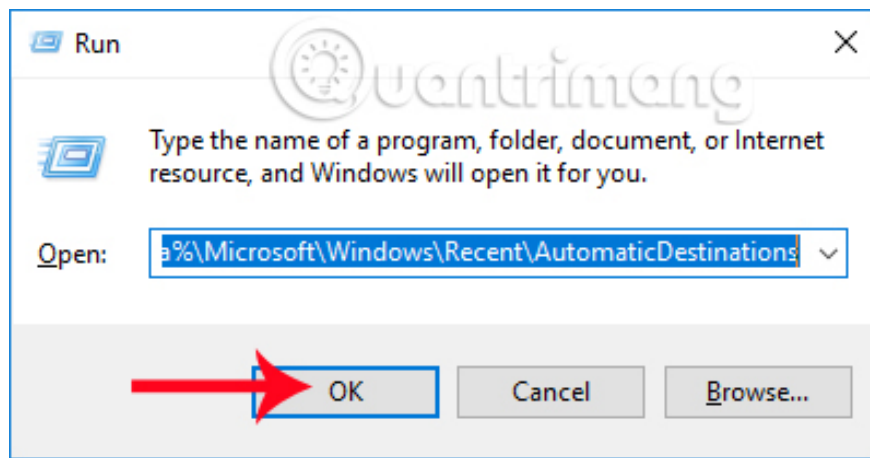

Step 4:

Finally, users will proceed to delete the cache on File Explorer. Please follow the directory link below.

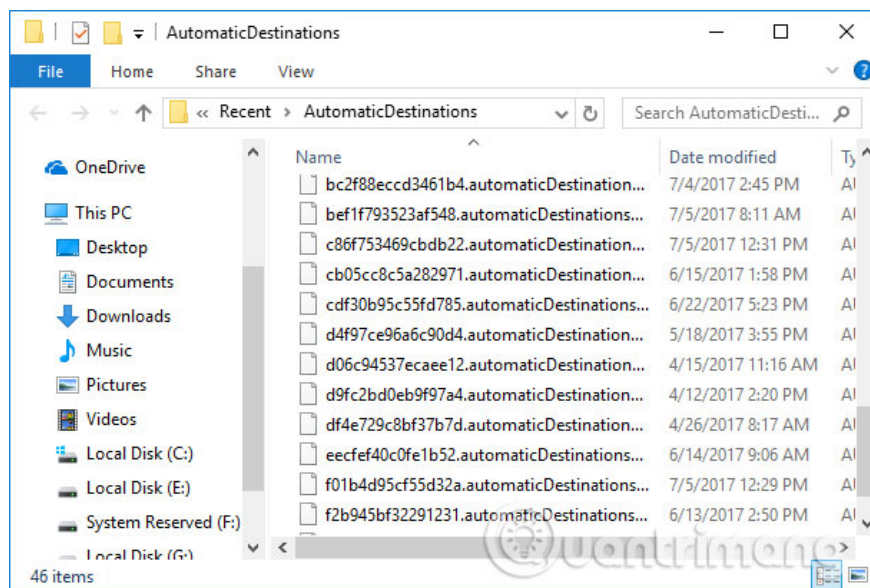

1. % AppData% MicrosoftWindowsRecentAutomaticDestinations

Or you can enter the path into **the Run dialog box** by pressing the Windows + R key combination and then clicking OK to open.

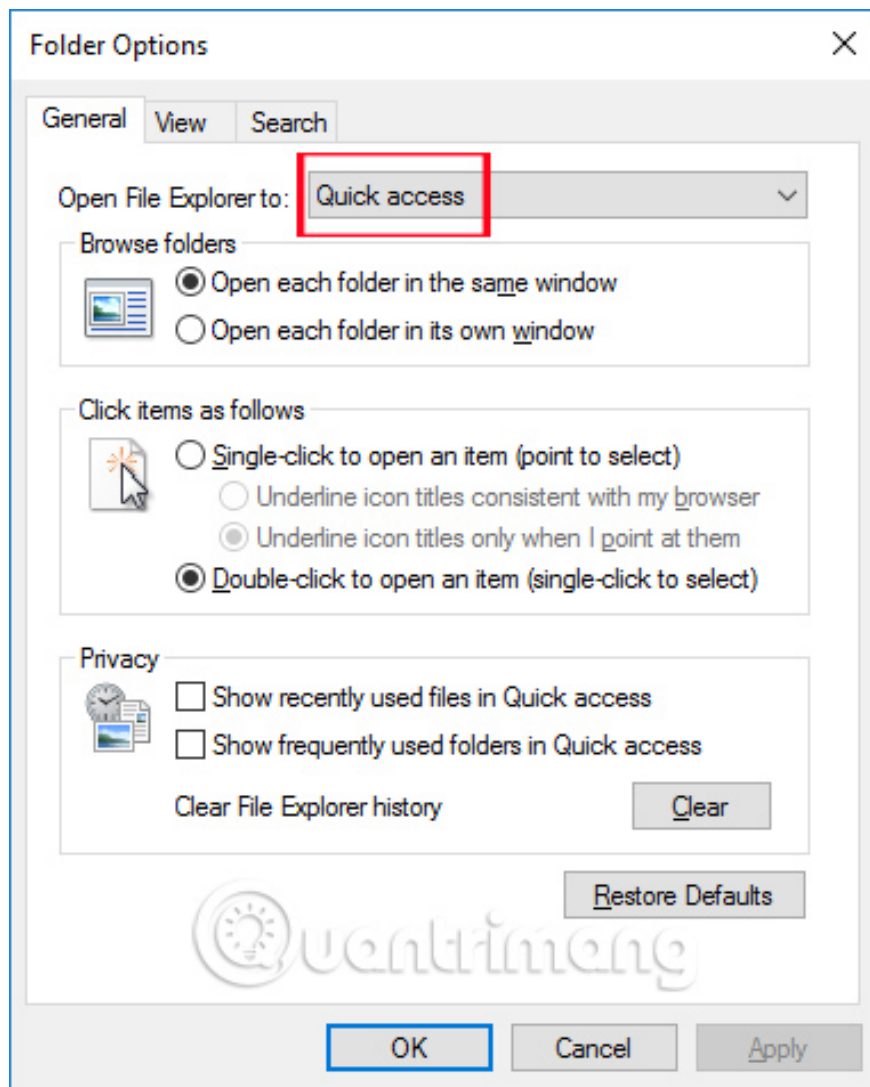

Step 5:

Appearance of the **AutomaticDestinations** folder interface. Here, delete all cache files in this folder.

The last step is to access Folder Options and turn the Open File Explorer item into Quick access. If you don't want to, you can leave This PC as well.

So we have to clean up the history, as well as delete the cache on File Explorer to fix Working On It. This error occurs when File Explorer cache is too full, or when users open multiple apps on the computer. If so, please try to follow the steps above to fix the hang on File Explorer Windows 10.
