

How to fix yellow screen phone error

The phenomenon of yellowing the phone screen is not not happening. Then on the screen will appear yellow haunt or blue renders annoying users.

The yellow reclining screen happens relatively little on Android and iPhone devices but not impossible. Gold screen renders error may be due to the device's installation mode, external influences cause the screen to be broken.

The yellowing of the screen by setting up the system has a simpler remedy. For example, you turn on Night Shift mode to use the device at night, reduce the impact of the camera from the screen light to the eye, or the Color Filter mode that you use to edit iPhone screen colors. If it is related to external physical error, the user must bring the device to the repair center of the company.

The following article will guide how to fix the yellow screen error on the phone, due to the device's operating system error.

1. Turn off night mode to fix the yellow haunted screen:

Night mode on iPhone is Night Shift or night mode on Android phone is Night Miode, will help users to limit the impact of light when using the device on night. This mode switches the device to yellow, soothes the eye and reduces glare. You may use this feature, or the automatic switch to this feature causes the screen to be yellow. So just turn off this feature on the device.

With iOS devices, readers refer to how to turn off the Night Shift mode in the article "Night Shift Activation Guide" on iOS 9.3

On the Android device, to turn off night mode, refer to the article [Instructions on how to enable Night Mode on Android Nougat](#).

2. Adjust the color contrast:

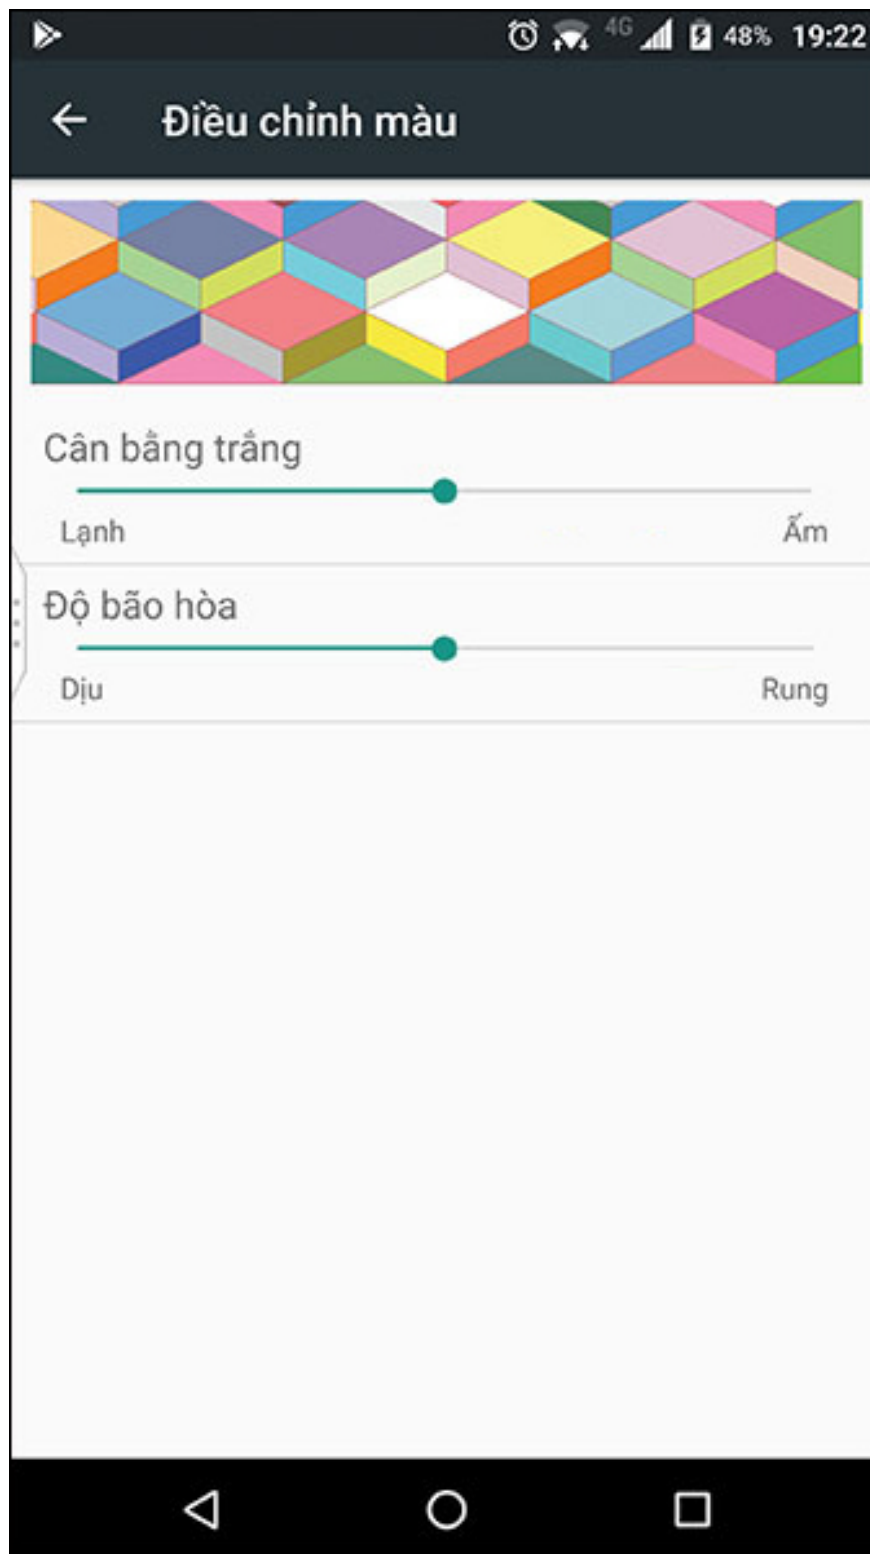

If the screen has a color change, you can check the Color Filter. It may be because you changed the settings here, which leads to the yellow haunted device. To change the color filter on the device you will perform in the Settings section of the device.

On **the iPhone device** we go to the Accessibility section, select Adaptive screen and then press the Color filter. Then change the color according to the user.

Refer to the article [How to fix yellow screen error on iOS 10](#).

With **Android device** , we access **Settings> Display> Color adjustment** . Adjust the saturation and white balance to about 50%.

Above are 2 ways to overcome the situation of the device screen is yellow, green or yellow. In addition, they can also adjust the device's light by rebooting the device or restoring the original settings to the iPhone, bringing the device back to the original settings. But first try to check your device's color settings or night mode.
