USB is a removable storage device that has been present for a long time and is still used by many people because of its utility to store data. With the old USB drives that were both large and small in size, they are now much smaller and have a lot bigger capacity. Currently the USB standard is USB 3.0, which gives users very fast data recording speed, as well as no errors during use. Today, the Software Tips will guide you how to Format USB on your computer.

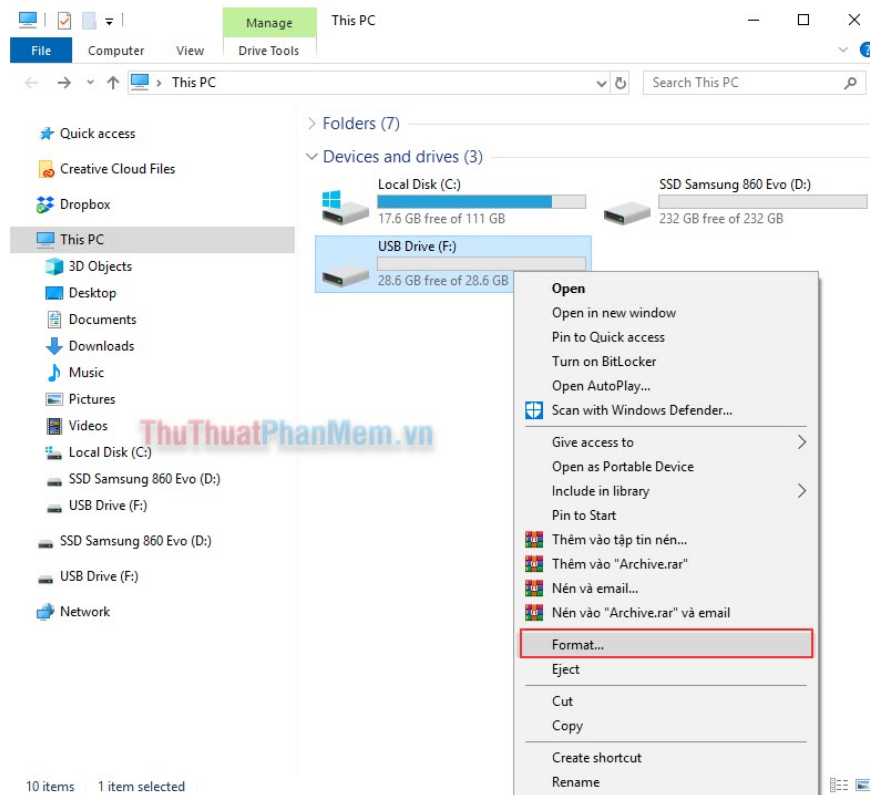

1. Format directly on Windows with the Format command

Step 1: Open This PC, then search for the USB that needs to be formatted.

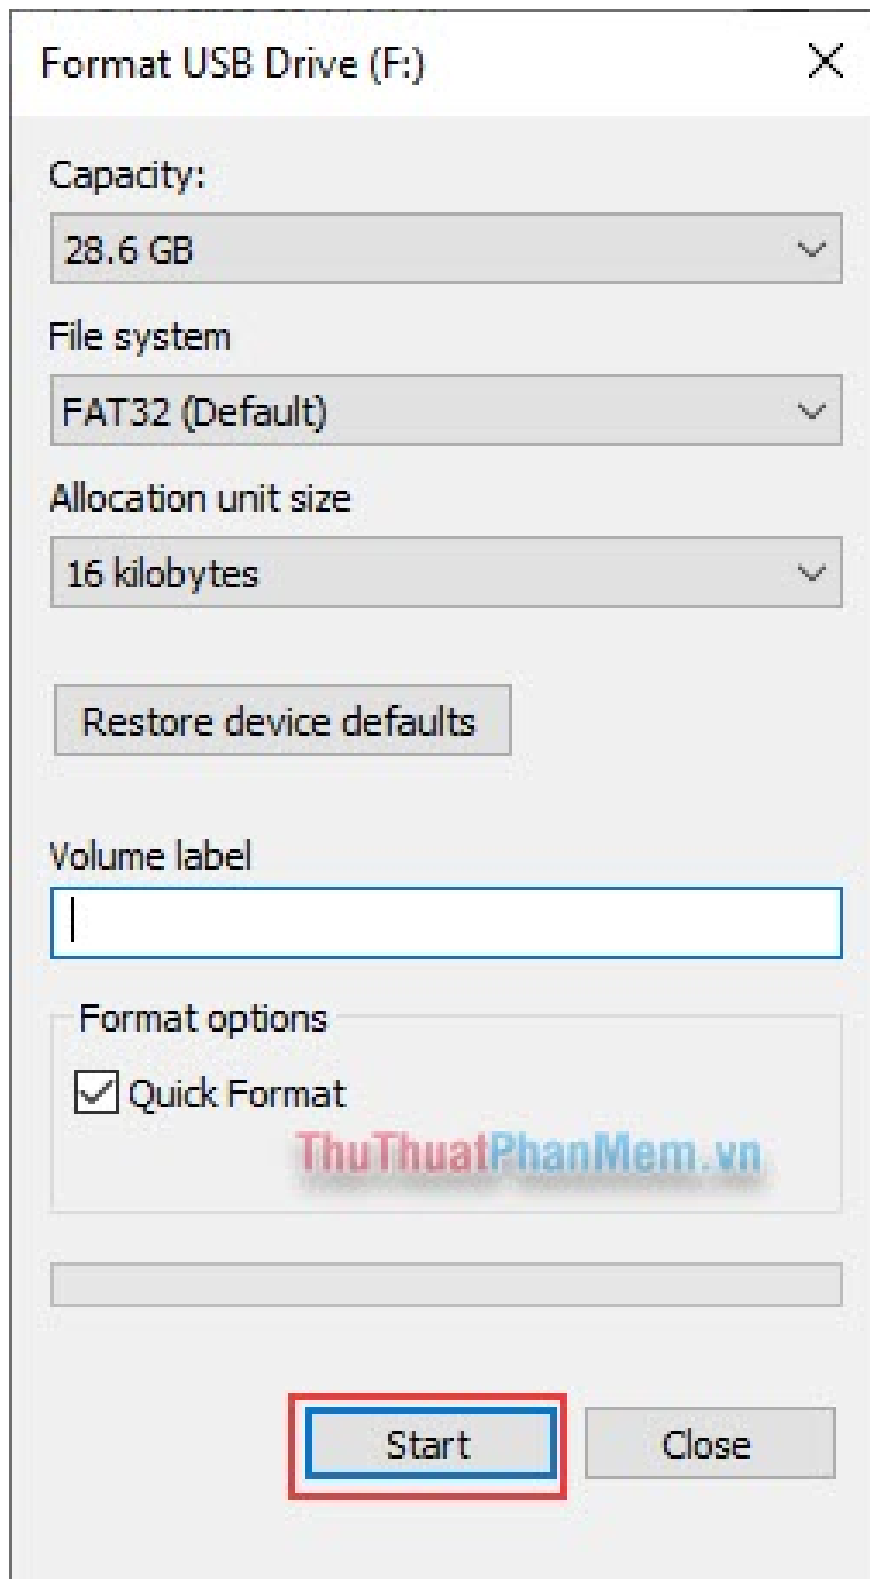

Step 2: After selecting the USB need Format, you proceed to right-click on the USB and select Format .

Step 3: A new window will appear, here you have the options before formatting.

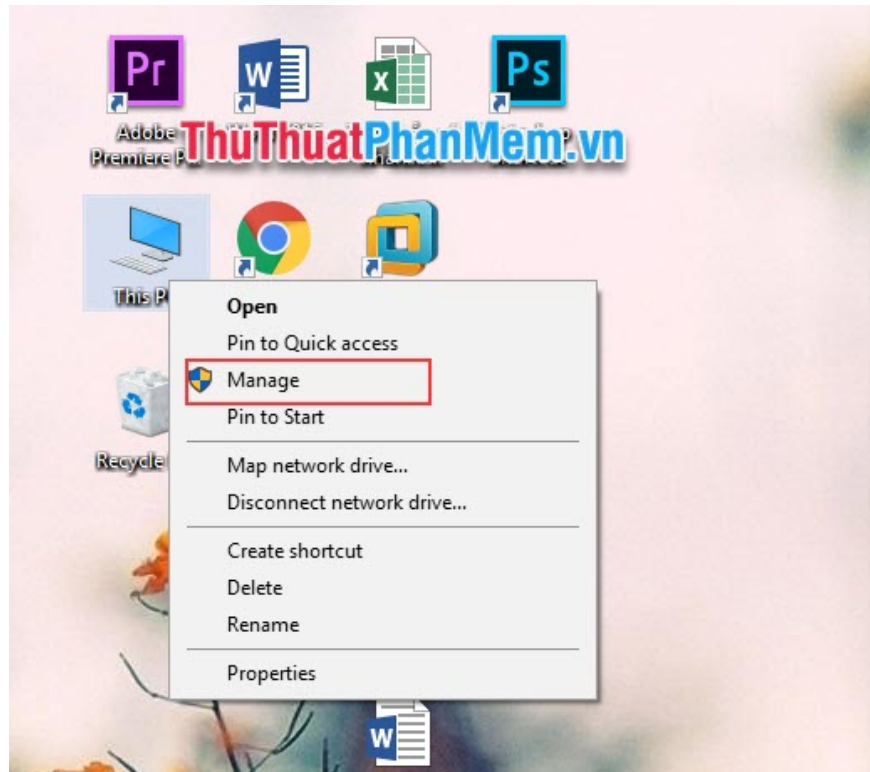

1. **Capacity:** USB capacity
2. **File System:** USB format
3. **Allocation unit size:** File size
4. **Volume label:** USB name after formatting

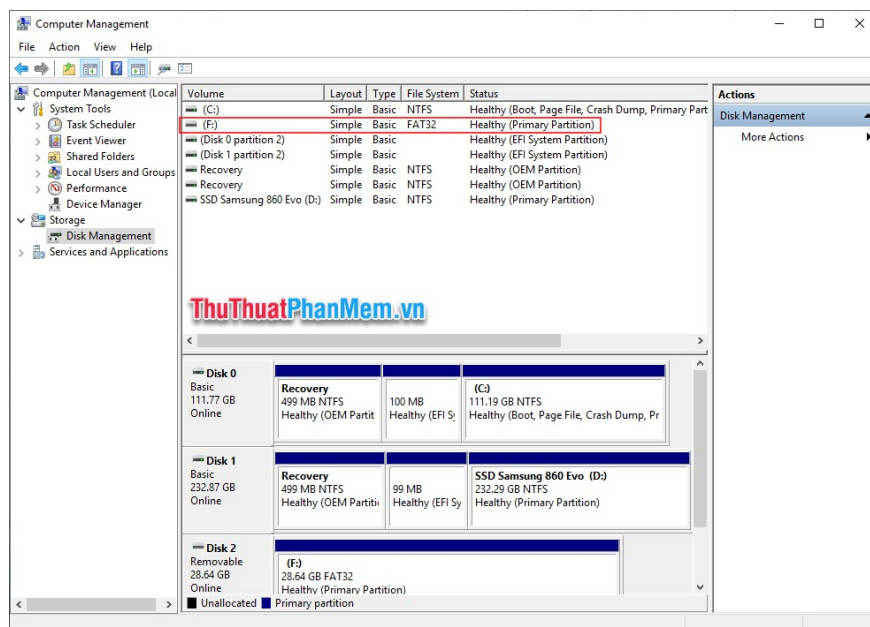

After setup is complete, you click Start to begin formatting your USB. Format time depends on the size of the USB and the speed of your USB reading.

2. Format USB in Disk Management

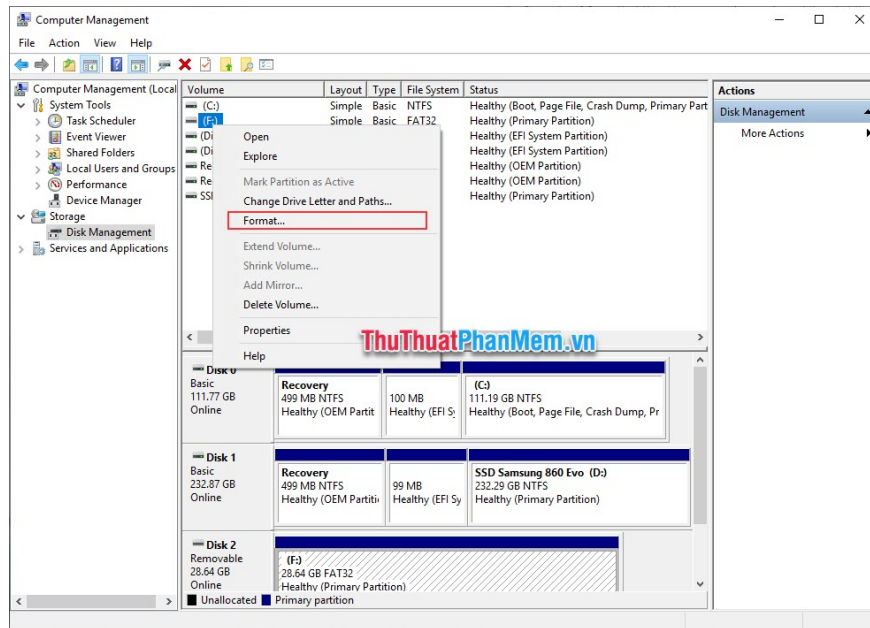

Step 1: Right-click on This PC and select Manage

Step 2: In Manage, select the Disk Management section on the left hand column. Then, you determine the USB drive needs to be formatted.

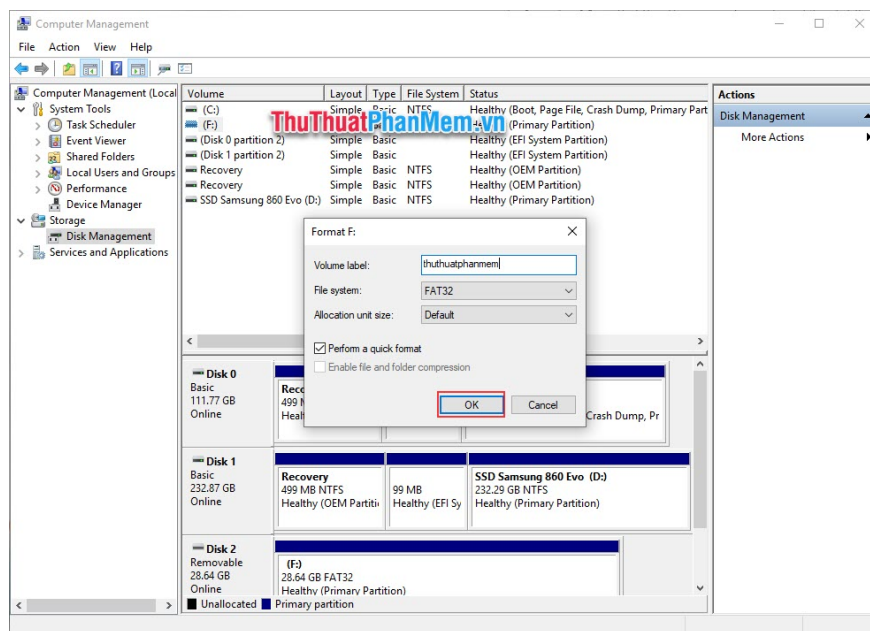

Step 3: You right-click on the USB drive and select Format .

Step 4: You proceed to set some parameters:

1. **Volume label:** The name of the USB after Format
2. **File System:** Format the USB drive
3. **Allocation unit size:** File size

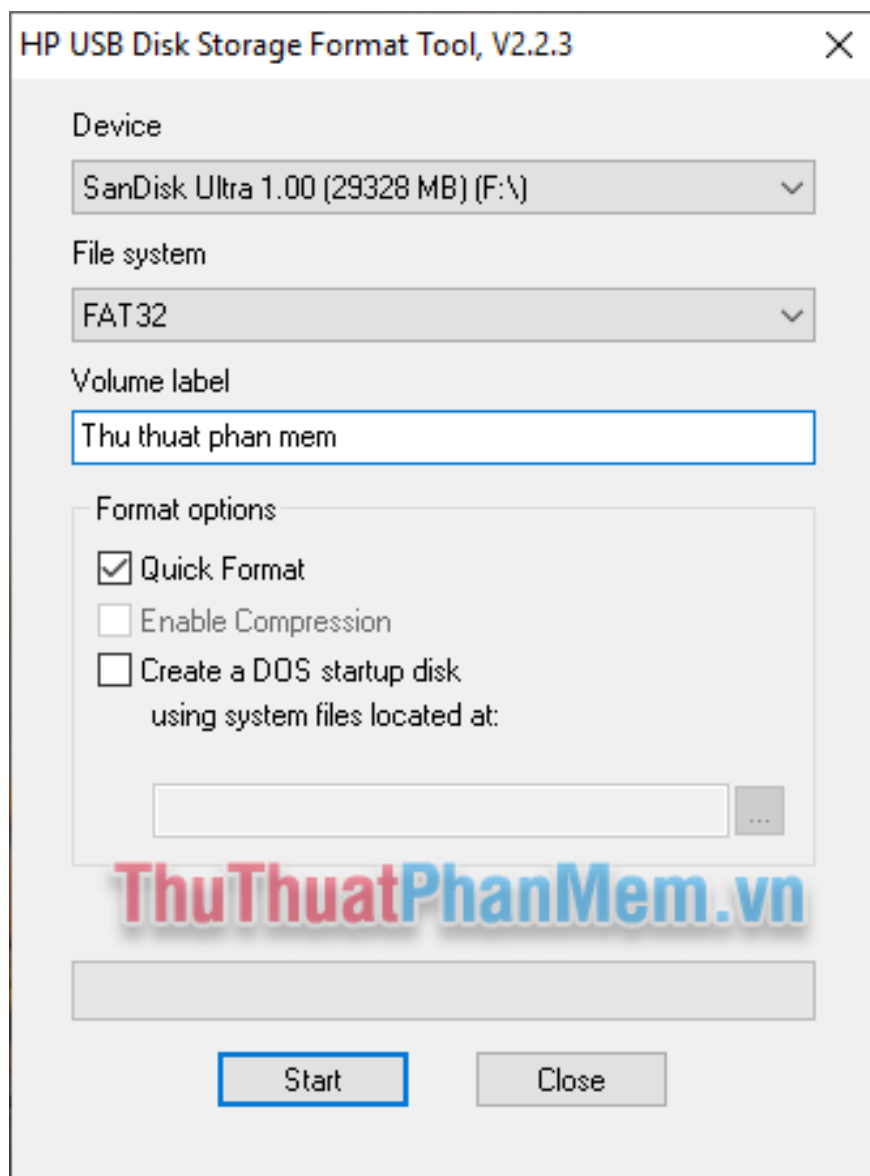

After you finish setting up, click OK and your USB will start being Format.

3. Use the third software - HP USB Disk Storage Format Tool

Link: <https://hp-usb-disk-storage-format-tool.vi.softonic.com/download>
