

How to forward mail (forwarded mail) has received to another mail

How to forward mail (forwarded mail) has received to another mail. When you own 2 or more Gmail accounts, it will take a lot of time to check your mail everyday because we often have to log into each account to check the mailbox. To solve

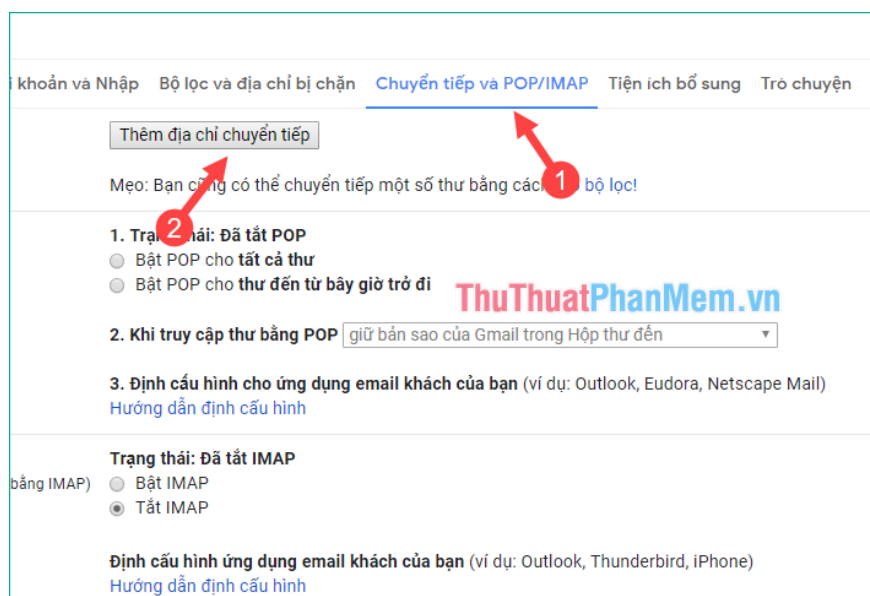

When you own 2 or more Gmail accounts, it will take a lot of time to check your mail everyday because we often have to log into each account to check the mailbox. To solve this problem we can use the automatic forwarding feature in gmail, this way you can set up your gmail accounts to automatically transfer mail to a certain account. So you only need to log into one Gmail account and still be able to check mail in another account. If you do not know how to do it, please follow the following article of TipsMake.com.

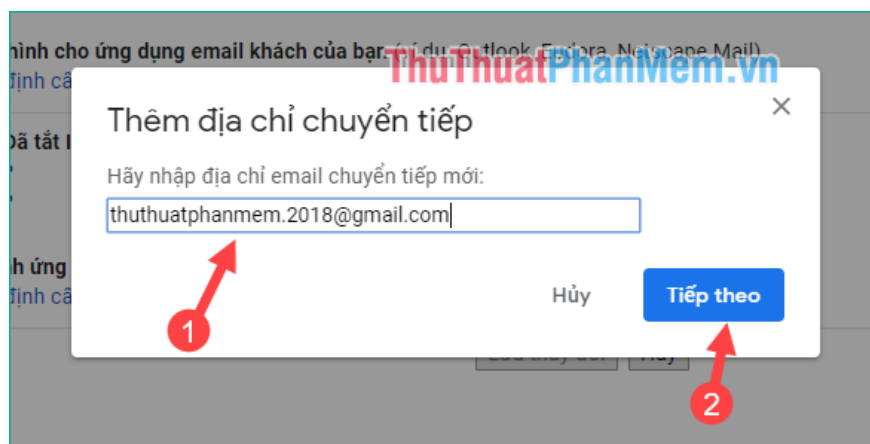

Step 1 : Please log into your gmail account to forward mail then click on the gear icon and select **Settings** .

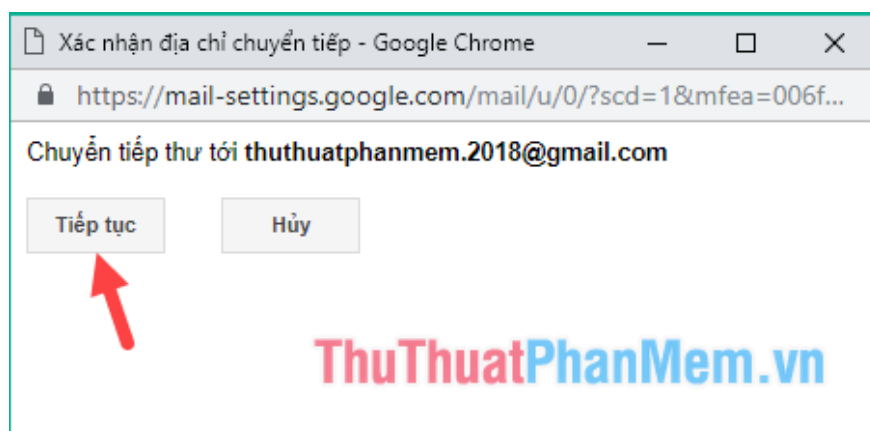

Step 2 : In the settings window, select **Forwarding and POP / IMAP** tab and then select **Add forwarding address** .

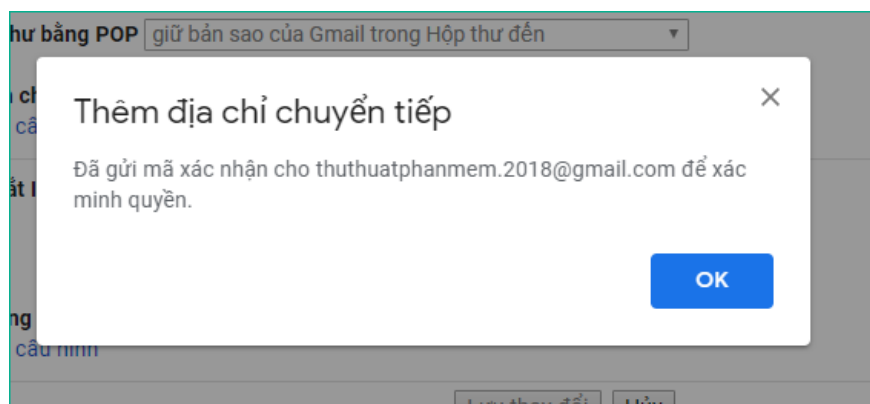

Step 3 : A small window appears, enter the gmail address to receive forwarding mail and click **Next** .

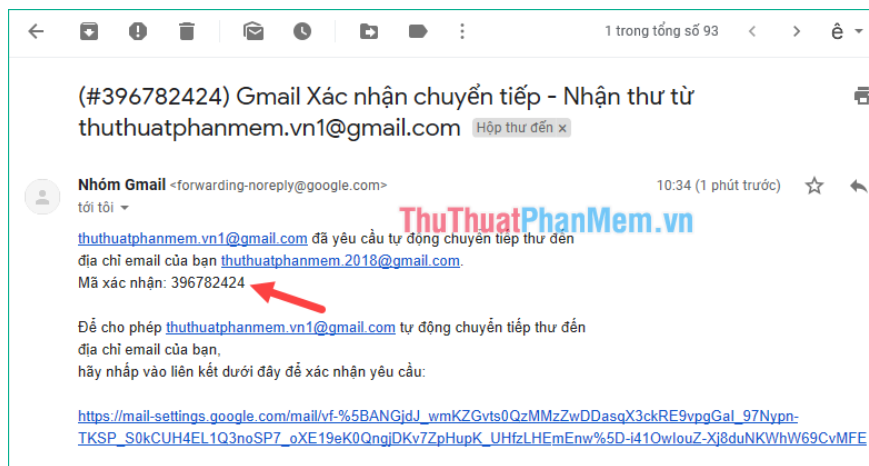

Another small window appears, click **Continue**

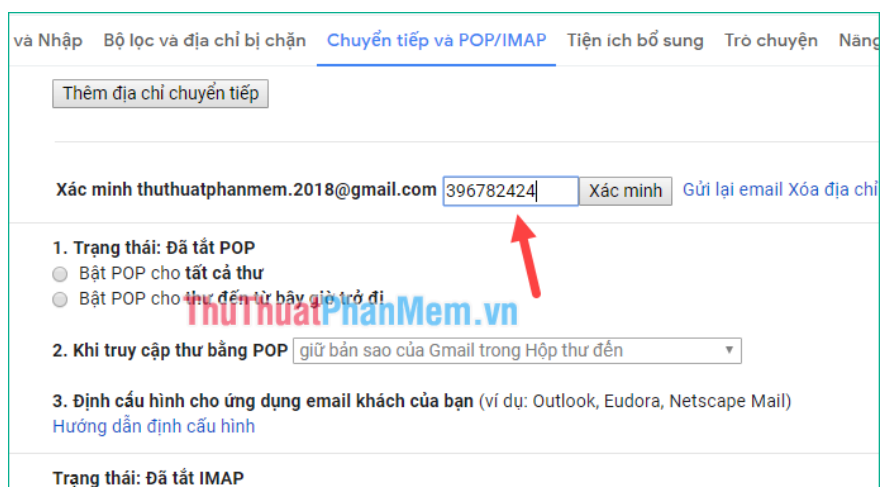

Gmail will send a code to the email address you entered in the previous step, so please log into that Gmail account to get the verification code.

Step 4 : Open the confirmation mail and copy the confirmation code.

Step 5: Enter the confirmation code in the box and click **Verify**

Step 6: After the verification is complete, select the item Forward a copy of incoming mail to . Then click **Save changes** to finish.

So we have successfully installed the feature to automatically forward received mail to another mail. Thank you for following the article.
