

How to generate QR codes with Me QR Generator on phones and computers

The need to use QR codes for content to share these days has been very common. For example, create a QR code for a link on Chrome browser, create a QR code on Google Sheets.

And in this article, users will have the Me QR Generator tool to create QR codes for a lot of content on phones and computers. You can choose a lot of content that you want to generate QR codes such as audio, WiFi, images,. The following article will guide you to use Me QR Generator.

How to use Me QR Generator to generate QR codes on your computer

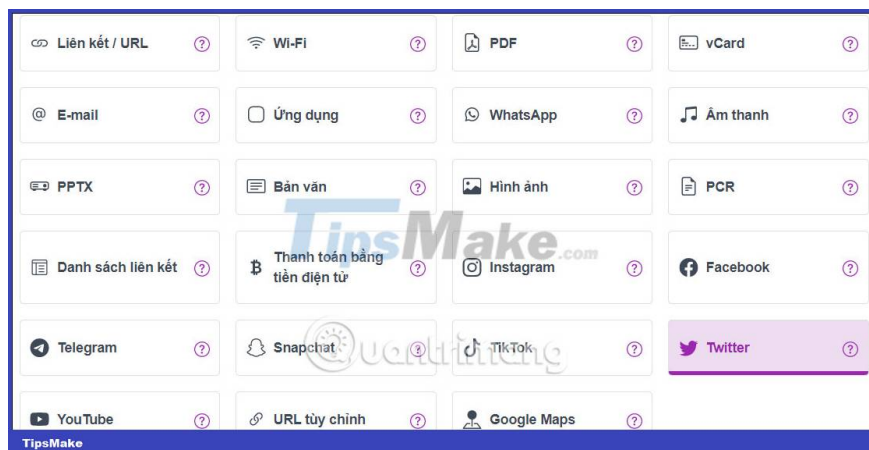

Step 1:

First of all, users access the link below to access the Me QR Generator website.

<https://me-qr.com/vi/qr-code-generator>

Step 2:

At this interface, users **find the content that you want to choose to create a QR code** . For example, it will generate a QR code for an image.

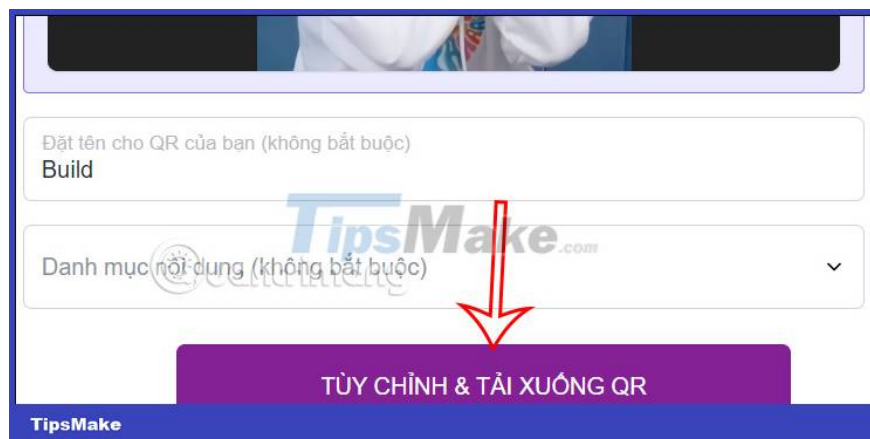

Step 3:

In this interface, you will follow the instructions to upload the content you want to create a QR code for. Depending on the content you choose, the content upload interface will be different. We will follow the content as shown in the picture.

Step 4:

After uploading the image, you will **fill in other content displayed** in the interface. You can fill in these or not. Continue to click **Customize & Download QR** .

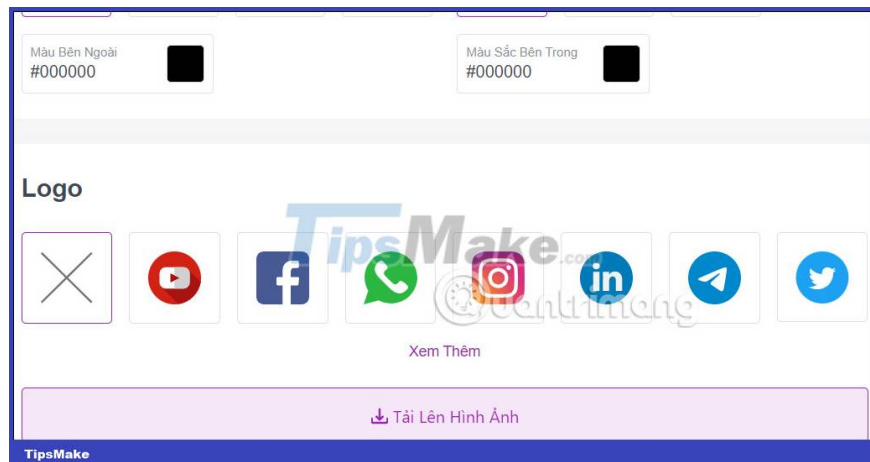

Step 5:

Switch to the custom QR code interface if desired. Here you will see the QR code customizations. We will click on **the Frame, Shape & Color and Logo section** to adjust the QR code.

In **the Frame section**, we will adjust the QR code frame for each different topic.

Below we will have a lot of different options, you can customize the QR code interface or upload images to your liking.

Step 6:

After adjusting the QR code interface, **select the format of the QR code** as SVG or PNG and then click **Download QR code** .

Instructions for using Me QR Generator on mobile phones

Step 1:

First you download the Me QR Generator application for your phone according to the link below.

Step 2:

At the website interface, users will log **in to the application** through a number of supporting accounts such as Google account, Apple account or Facebook account.

After successfully logging into the application, you will **select the content for which the user wants to generate a QR code.**
