Ghost windows is a term that is no longer unfamiliar to employees in the information technology world. Simply put, this is the act of backing up data on a computer hard drive.

Windows 11 was released by Microsoft with many improvements that allow users to have a new experience. However, after installing Windows 11, users need to wait for the computer to update the Driver or Backup data. This makes many users worried and hesitant when using Win 11. But now as a user you can proceed with [Ghost windows 11](#). Detailed steps of Ghost windows 11 directly on Windows 11 and Ghost Windows using UBS boot will be guided by TipsMake below!

## What are ghost windows?

The term **Ghost windows** is derived from a software called Norton ghost, which is software used to backup and restore system data to hard drive partitions.

To make it easier for you to understand, Ghost windows is essentially the act of creating a copy of windows at a time, usually when a new computer reinstalls windows so that if a win error occurs, it can be easily restored to its original state. However, this also carries some risks.

## When do you need Ghost windows? How is Ghost Windows different from reinstalling Windows?

### When do you need Ghost windows?

If your computer is heavily infected with a virus or if you don't like experiencing the new version, you can ghost your computer. Or even when your computer is slow or frozen, you can **Ghost windows** again to use.

Or if you want to transfer the system from one computer to another, creating a backup and using it on the new computer will save you time reinstalling and creating a system just like before.

In addition, Ghost windows will be faster than reinstalling, so create your own ghost version, which is personal and also compatible with that person's computer and more stable.

### How is Ghost Windows different from reinstalling Windows?

Reinstalling Windows and Ghost Windows are two different processes related to Windows system management. Reinstalling windows is the process of reinstalling the operating system from scratch, overwriting the entire

system, while Ghost windows is the process of creating a tweaked backup of the system and restoring from that backup when needed, helping Save time and maintain current settings.

Choosing between reinstalling Windows or Ghost windows depends on your specific purpose and requirements. If you want a fresh, clean system that doesn't retain any data, a reinstall is a good choice. On the contrary, if you want to maintain the current settings.

## Notes before Ghost windows

Before performing Ghost windows to create a system backup, you should note some important points to ensure that the process is smooth and efficient.

First, make sure you are using a properly activated and installed copy of Windows. Next, back up important data before starting and make sure that the storage media has enough space.
