

# How to Hack Windows

If you've ever needed information on hacking Windows, then here are two methods you can use. However, keep in mind that this is for learning purposes only. When the computer starts up, hold down F8 before you see the 'Windows Starting'...

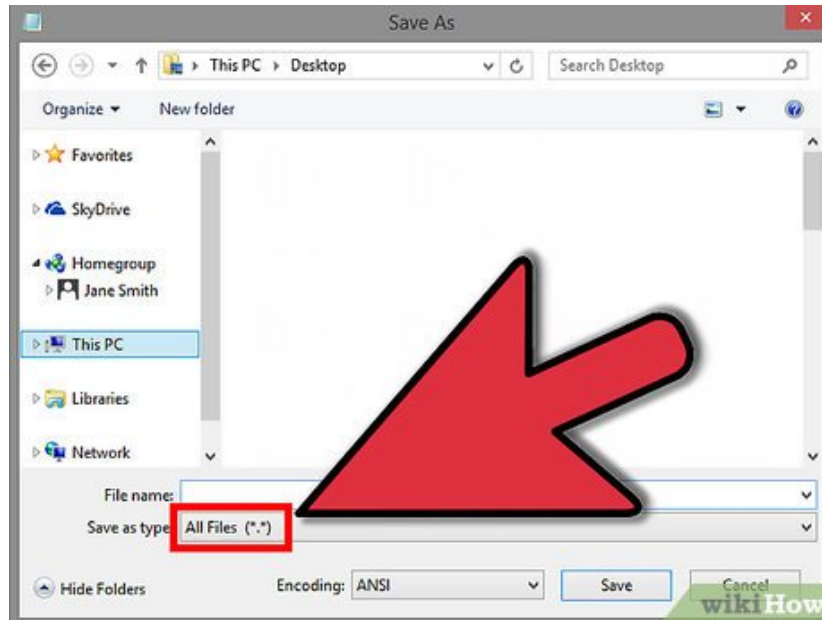

Method 1 of 2:

## Hack from the Start Screen

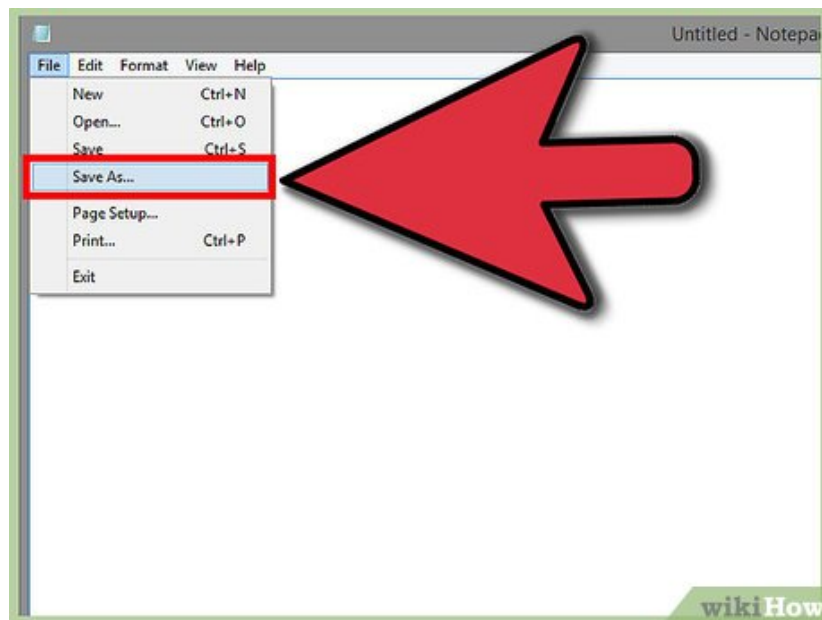

**When the computer starts up, hold down F8 before you see the "Windows Starting" screen.** This will bring you to a screen with choices. Your best bet will be "Safe Mode with Command Prompt". You can then do as you want.

2.

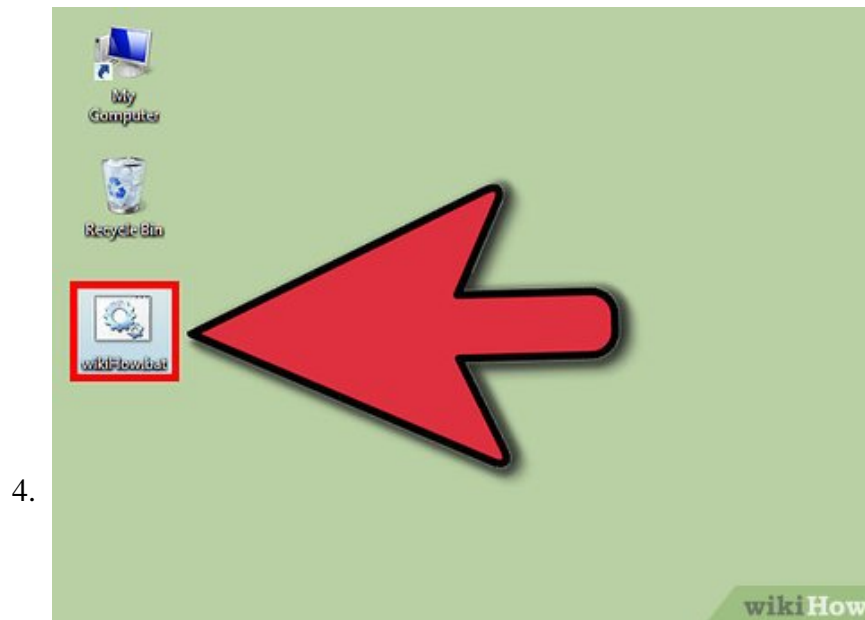

Open Notepad and press "save as". Select all files from the drop down menu. Name the file: "Something.bat".

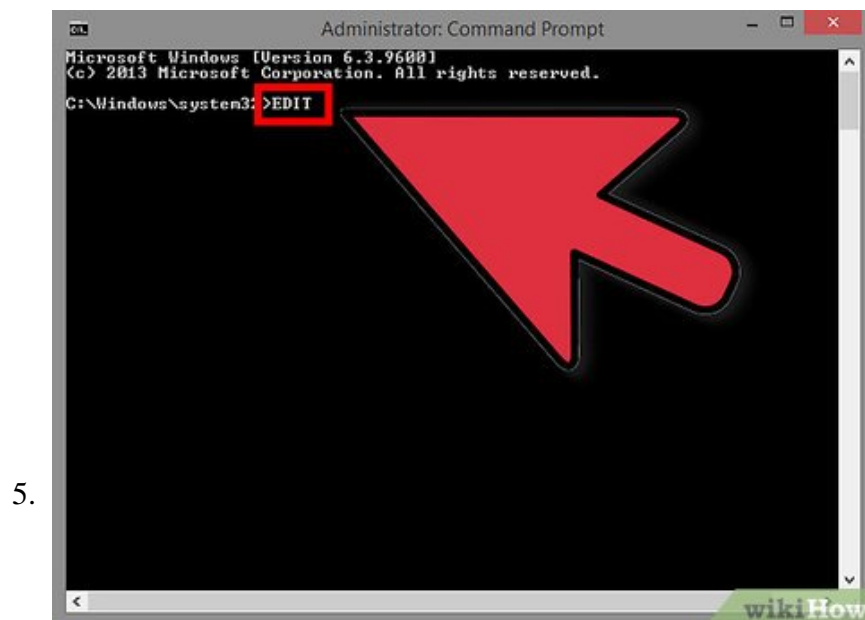

3.

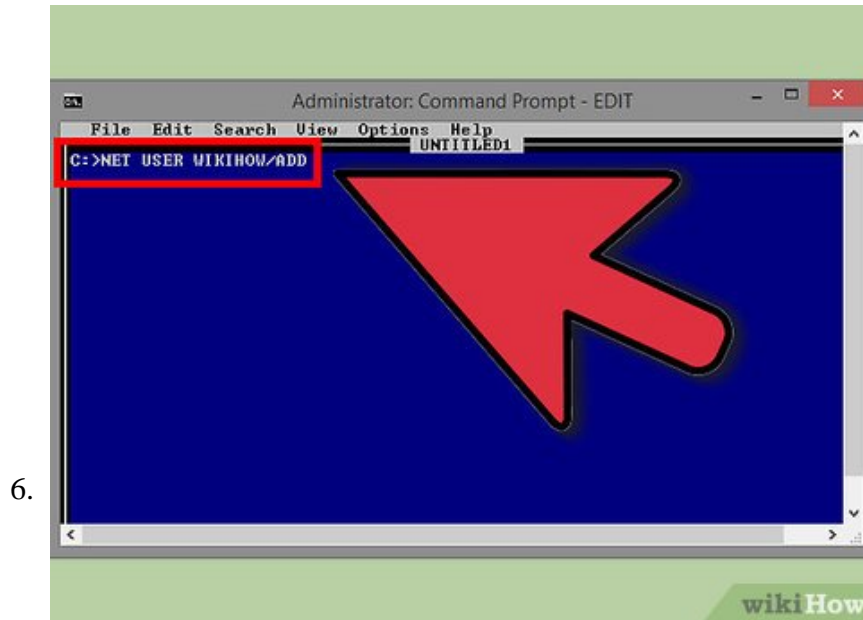

Go down to the bottom and select "All Files".

Go to where you saved the file, and open it. This will open up Command Prompt.

**If the computer has Notepad blocked, you can use edit.** Access this by opening command prompt or command.com and typing edit. Also, you can even use Microsoft Office or something if you can save it right.

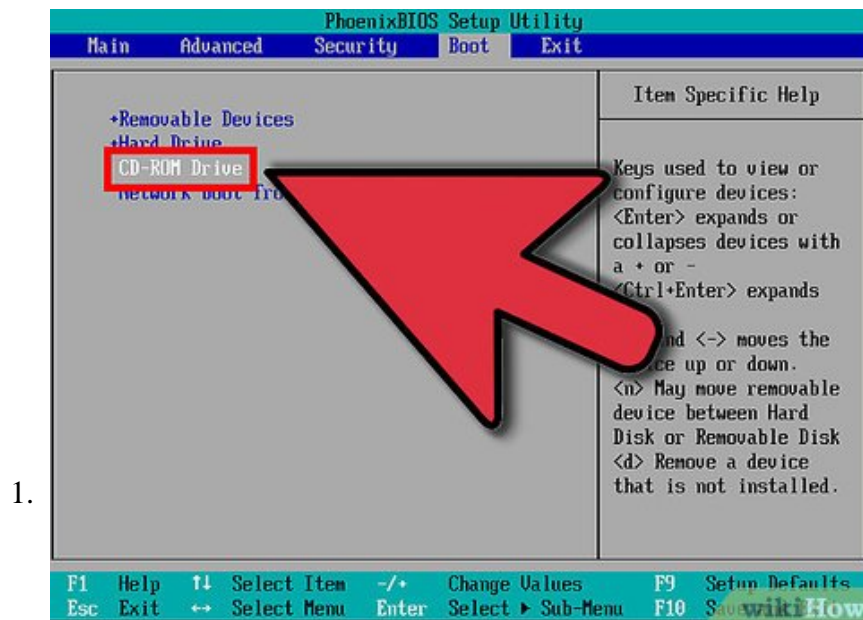

**Do as you wish inside command prompt.** Here is how to add or delete accounts:

1. Add Account: C:>net user USERNAME /add
2. Change Accounts password: C:>net user USERNAME \* then you'll be able to enter a new password for the account. If you just press enter without typing anything, the account password will be reset.
3. Delete Account: C:>net local group Administrators# # Another way is to open up notepad, (if it's not blocked), and type in "command.com". Then go to File->Save As. A USERNAME /ADD

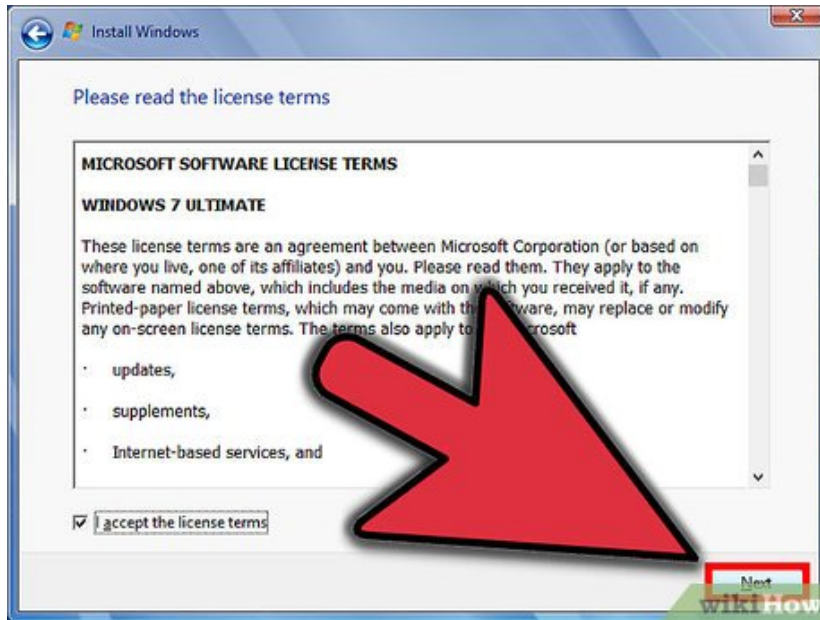

Method 2 of 2:

## Hack from the Windows 7 CD

**Boot the system from the Windows 7 CD.**

2.

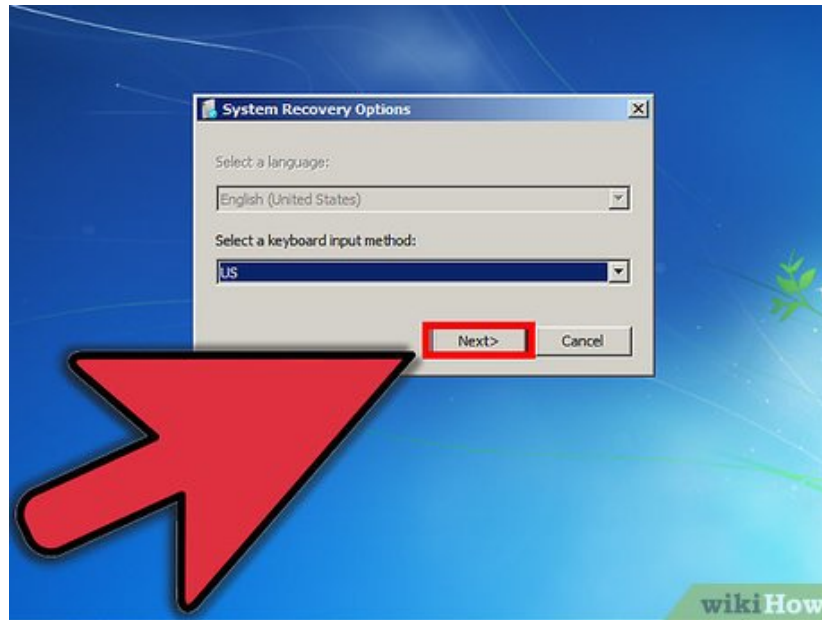

Click on Next.

3.

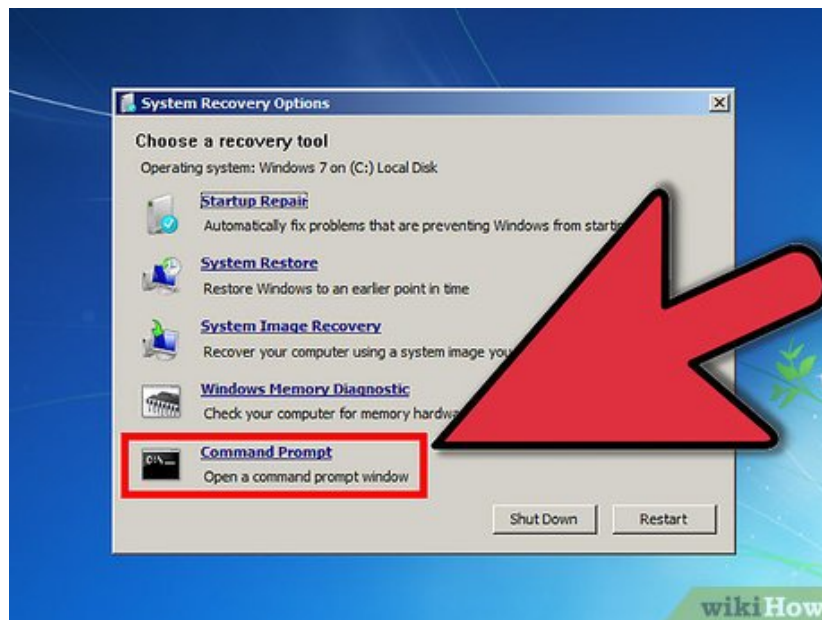

Choose 'Repair your computer'.

4.

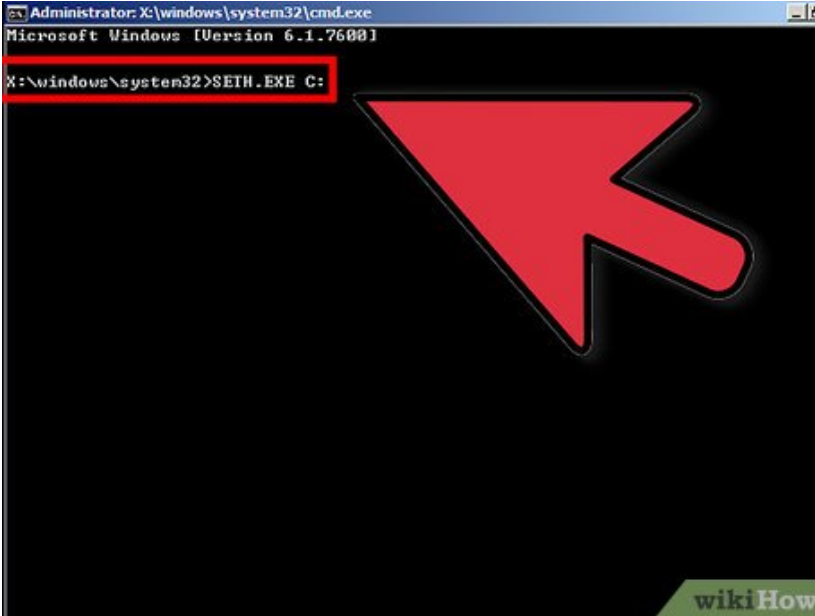

**Click Next in the System Recovery window.**

5.

**Choose the Command Prompt option below.**

6.

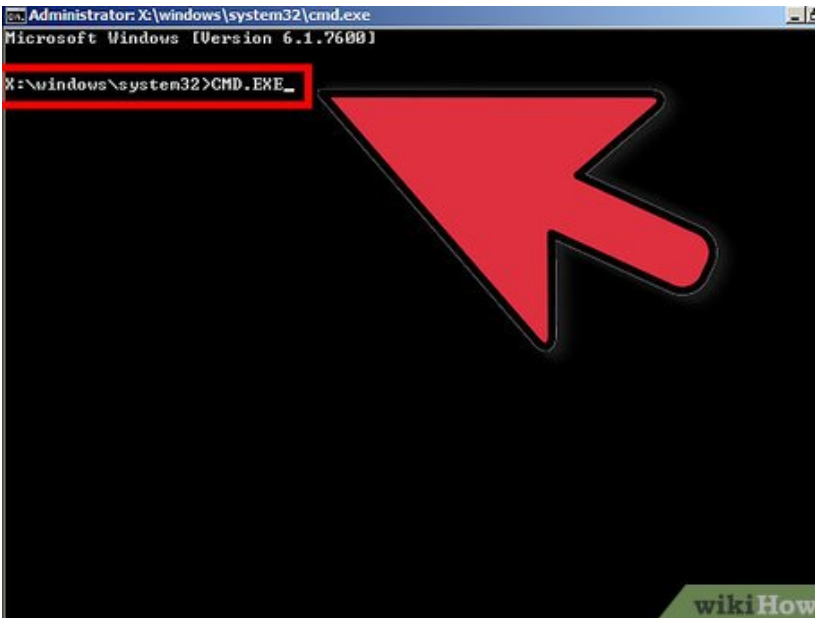

Administrator: X:\windows\system32\cmd.exe  
Microsoft Windows [Version 6.1.7600]  
X:\windows\system32>SETH.EXE C:

A red arrow points to the command prompt window. A 'wikiHow' logo is visible in the bottom right corner.

**In the command prompt window, copy the Seth file to C drive. Enter this command: 'C:\windowssystem32Seth.exe c:' (without quotation marks).**

7.

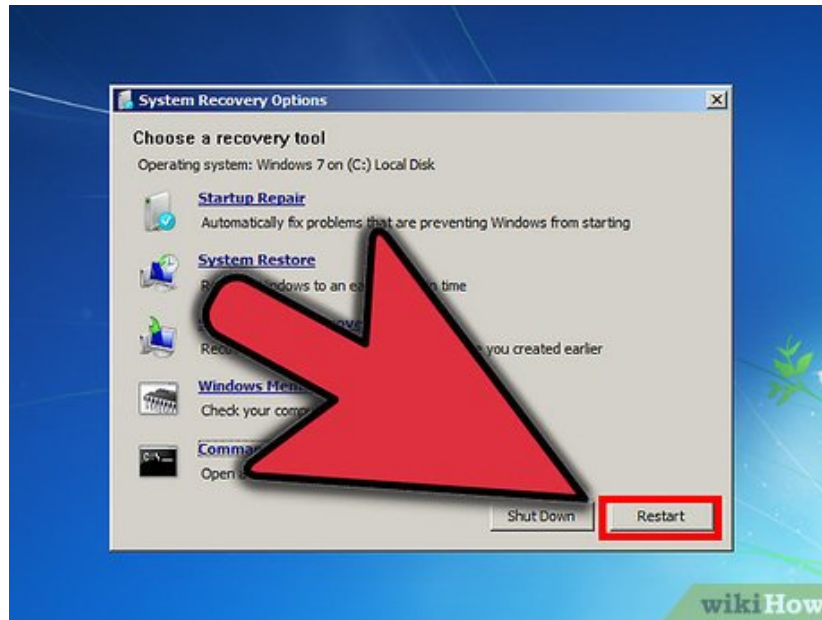

Administrator: X:\windows\system32\cmd.exe  
Microsoft Windows [Version 6.1.7600]  
X:\windows\system32>CMD.EXE\_

A red arrow points to the command prompt window. A 'wikiHow' logo is visible in the bottom right corner.

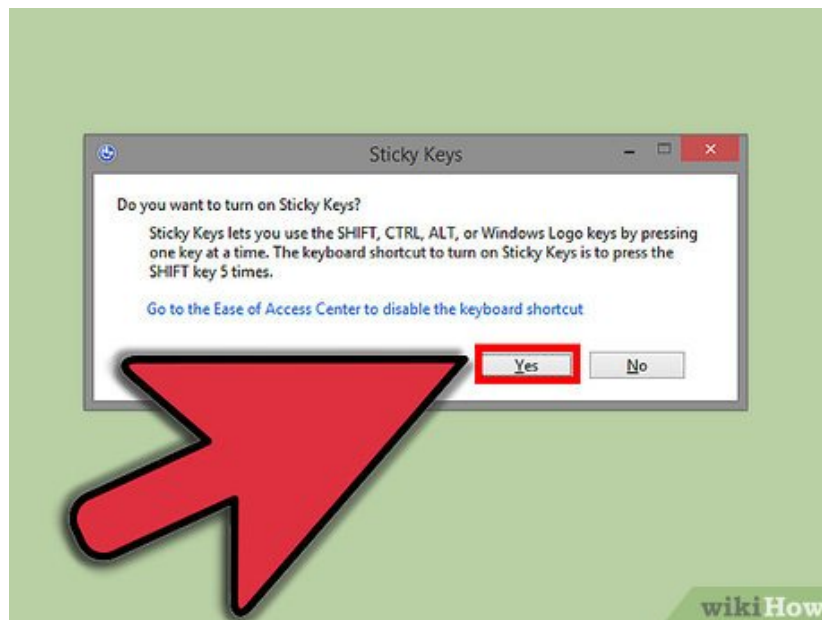

**Replace the Seth.exe file with cmd.exe file with following command, and type 'yes' to replace the file: "c:\windowssystem32cmd.exe c:\windowssystem32Seth.exe" (without quotation marks).**

8.

Type "exit" to restart the Windows setup.

9.

Press the shift key 5 times, rapidly, when you're in the username screen. In the Sticky Keys window, click Yes.

10.

**In the command prompt window type the 'net user,' 'user name' and 'password'.** For example: net user administrator 123
