

# How to handle frosted glass, blurry mirror for drivers when it is raining

The driving glass is blurry, the rearview mirror is blurry or skidding, driving loss is a situation of driving cars often in rainy weather. Here are good tips to help the driver handle quickly in the above situations.

Rainy weather always makes it difficult to drive on the road. Wind rain not only makes the car's glass blurred, the rearview mirror is blurry but also reduces the visibility, causes slippery and limits the visibility and safety when driving. Below will guide you how to handle the most common situations when driving rain.

1. Experience traveling safely into the rain for the near-sighted people

## 1. Car glasses are blurred when it rains

When driving in the rain or in humid weather with cold air, low temperature causes the steam inside the car to condense and cling to the inside of the glass, causing blur and difficulty for driving when traveling. moved on. To get out of this situation, we need to make the steam in the car be released and the best way to evaporate water is to turn on the air conditioner. You just need to turn on the air conditioner for a few tens of seconds until a minute, the glass will be dry, then it should be customized for the wind direction to the cabin, should not be thrown into the glass anymore. And the air conditioner at this time can be turned on in hot or cold mode to best suit the needs of the people sitting in the car and the weather conditions, the car glasses will not be dimmed anymore.

When the car is outside for a long time, as soon as you step on the car, the fastest way to dim the glass is to turn on the glass heater, if the car does not have a glass heating mode, turn on the air conditioner, big wind and choose the wind up mode. glasses.

## **2. When the rearview mirror is blurred**

When driving, to easily observe behind the road or to the road, drivers often only observe through the rearview mirror. However, if that day on rainy days, the amount of water that will be deposited on the rearview mirror will be blurred, making it difficult to observe the road, what should you do? For some models, there will be a rearview mirror drying mode that can help you get rid of this problem. But what if the car doesn't have a mirror drying mode?

In this case, you can take a clean towel to wipe directly on the mirror and car window, but this is only a measure to combat small rains. As for the heavy rains, according to the experience of many long-time driver drivers, you should take the tobacco or pipe tobacco intestine and then close it to the mirror surface and wipe it off, thanks to the plastic layer of the cigarette will forming a barrier against water, creating effects like lotus leaves, water forming droplets like bone particles. Besides, if there is no cigarette, you should choose newspaper papers with a lot of ink and wipe it on the glass many times, it also has a relatively good effect.

Besides, if you have time, the best way is to go to the car garage to ask for NaNo, spray straight on the mirror surface and wipe evenly, this chemical layer also helps to create the lotus leaf effect, when meeting the sky Rain, car mirrors will not be watery.

## **3. In case of heavy rain cannot be observed**

When you are moving on the national road, you suddenly encounter a heavy rain and you will likely be limited in sight although the windshield wiper in front of the car will work at full capacity, however, if the rain is too heavy, it is necessary. wiper will also be weakened. At this time, the best way to ensure that safety is to turn on the hazard warning light (hazard), turn on the fog lights or near-spotlight mode so that the front and rear vehicles can see you, for sure they Also having similar difficulties, at the same time should reduce speed, keep distance from the previous car.

In case you see the license plate and rear end, you are probably going too close to the car, the best way is to slow down to keep the distance from the vehicle ahead or if the lane divides, then you should actively split into another lane. When going on a rainy road, it is necessary to limit the braking immediately, because if braking quickly, it will be difficult for the rear car to react, causing an accident to stab the tail.

#### **4. Avoid skidding, lose driving when it rains**

When driving when it rains you should be aware that tires will stick to the road poorly compared to dry weather, so when driving in rainy weather you should be absolutely careful. In 10-15 minutes after driving rain, lubricant oil escaping from other vehicles drifting down the road makes the road surface extremely slippery so you should slow down to be easily controlled. It is advisable to avoid the paths of trucks or buses, because those places are often flooded by rain, making the buffalo and elephant drive be blocked, making you unaware of the danger that could lead to you losing. Drive and crash into another car or curb.

### **Some notes when it comes to rain it is**

1. Absolutely no braking with great force because on a slippery surface, such a move can make the car turn horizontally, leading to an accident.
2. If the rain is too big and prolonged, the observation is difficult, it is best to pull the car to the side, turn on the danger warning, wait for the rain to stop and continue the journey to ensure safety.
