When we use the internet, a lot of bad people want to access your device to install malware on your computer to advertise many things they want. If you are not awake, just press the wrong button, your computer will continuously show different ads.

When we use the internet, a lot of bad people want to access your device to install malware on your computer to advertise many things they want. If you are not awake, just press the wrong button, your computer will continuously show different ads. The handling of Advertising Virus is also relatively difficult and requires a lot of time. In this article, the Software Tips will guide you how to handle when the computer is infected with Advertising Virus.

1. Light advertising virus

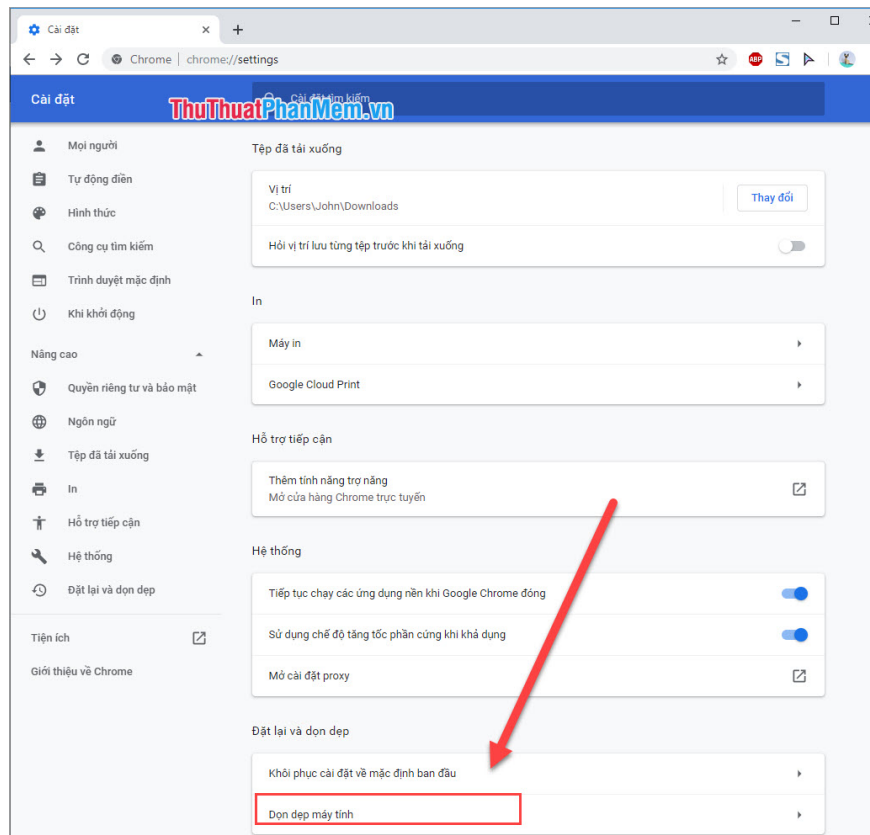

On the market today there are many different viruses that can interfere with your computer. With each level we can solve in many different ways. Normally with light advertising virus, we just need to reset the browser to the default, all information related to Virus will be completely removed.

Chrome browser / Coc Coc

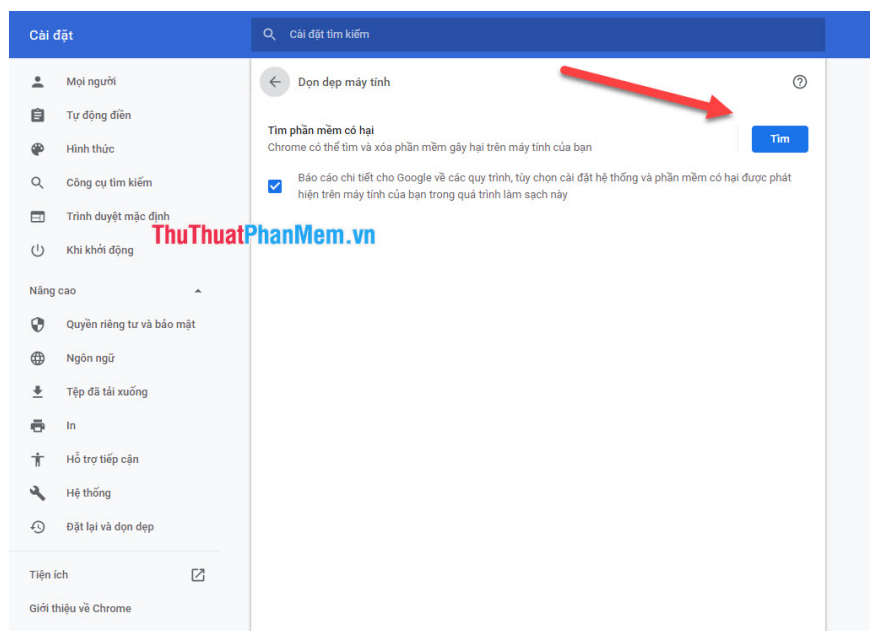

For Chrome / Coc Coc, the two browsers have built-in virus protection feature right on. You just need to boot up to be able to use without resetting your browser anymore.

Step 1: You access the following link to use **chrome: // settings /**

Step 2: Scroll down to the bottom and select **Clean Computer** .

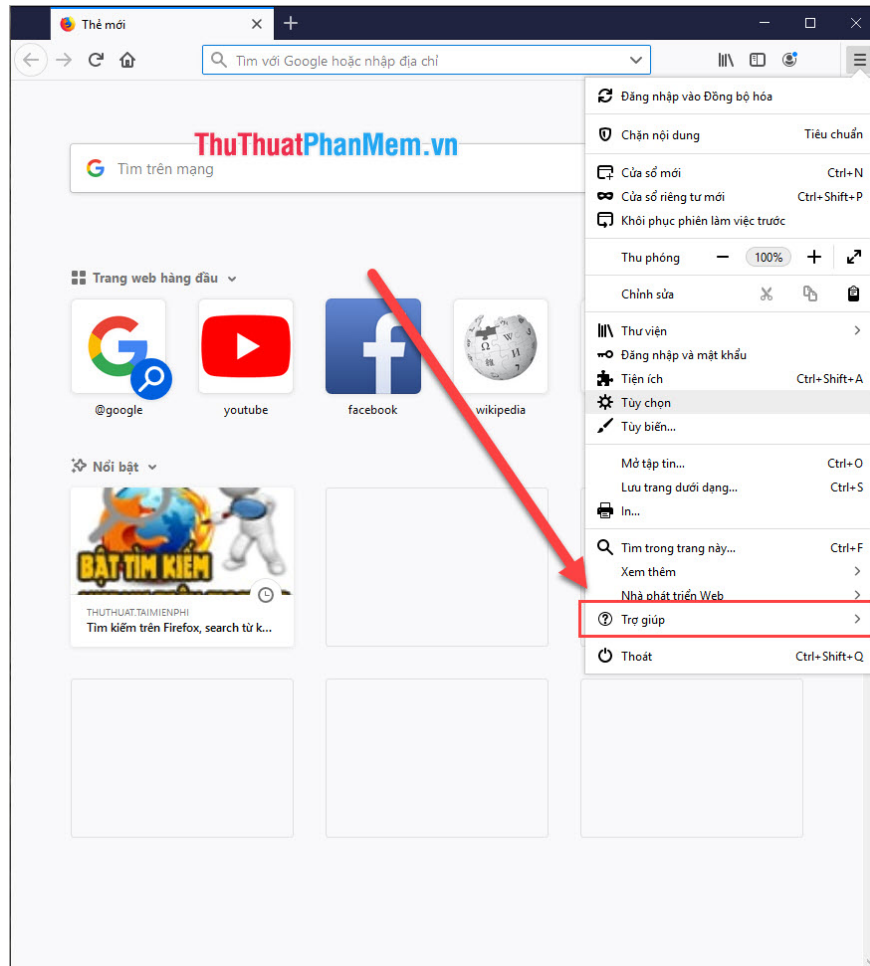

Step 3: You then launch the **Find Malware** feature . Chrome / Coc Coc will automatically scan your browser and handle viruses for you.

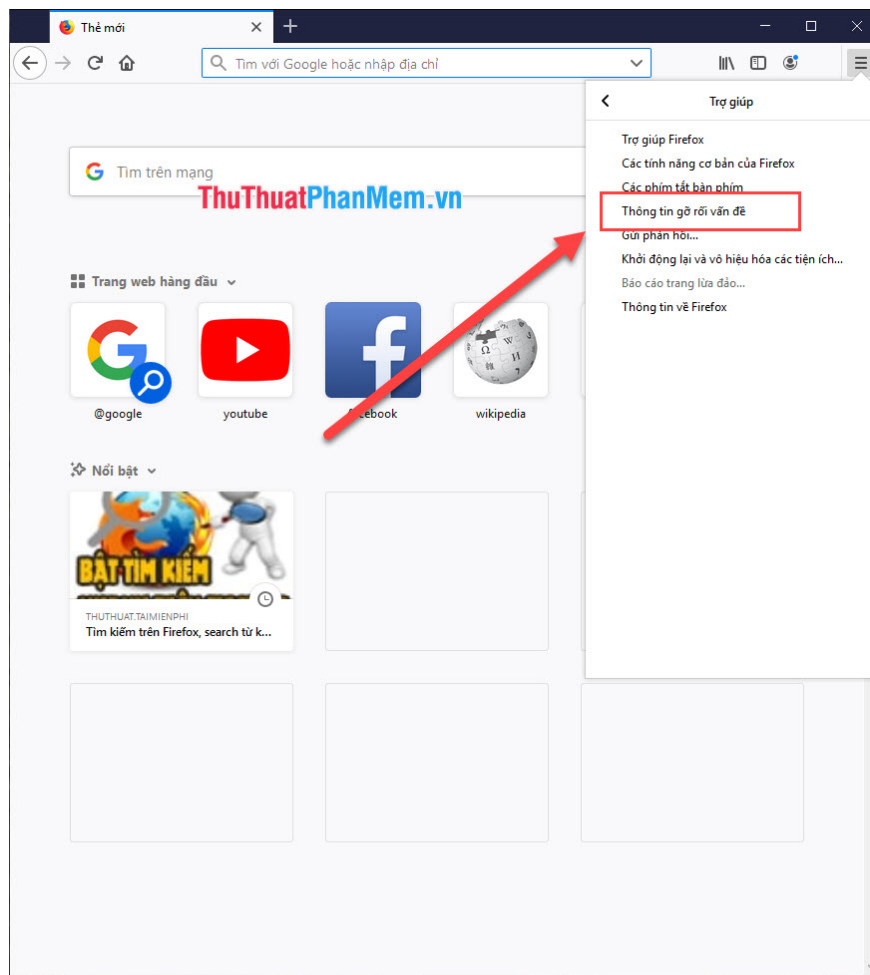

Firefox and other browsers

For other browsers, it is not integrated features like Chrome / Coc Coc. We have to do it manually by resetting the browser from where.

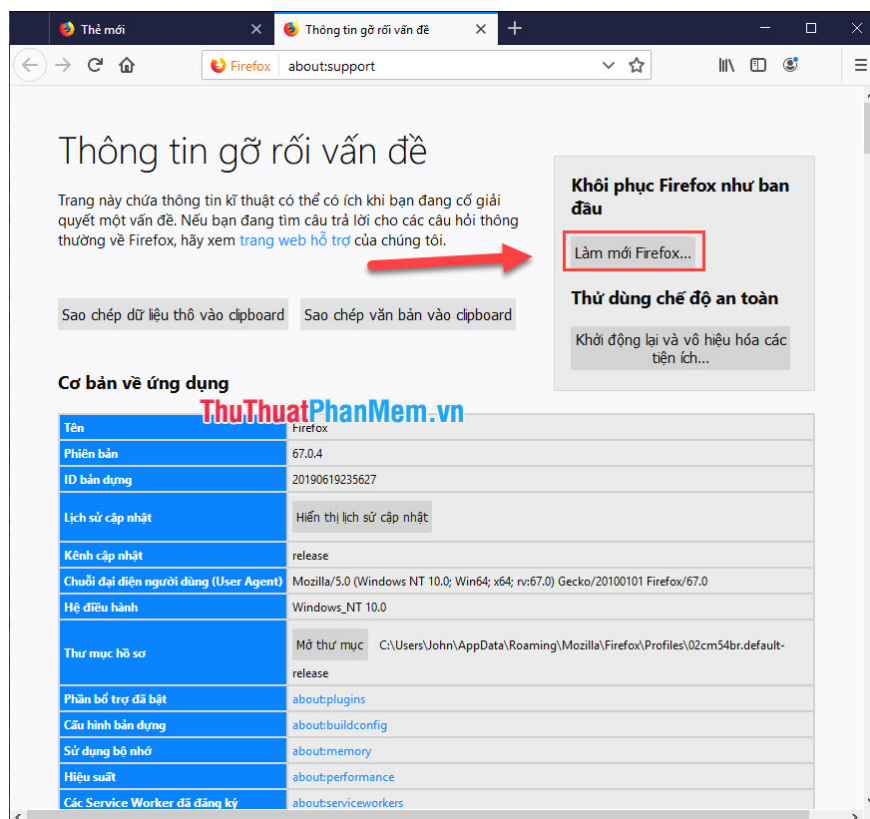

Step 1: You select the **Options** icon and choose **Help** .

Step 2: Next, select the **Troubleshooting information** .

Step 3: Here you select **Refresh Firefox** . is done.

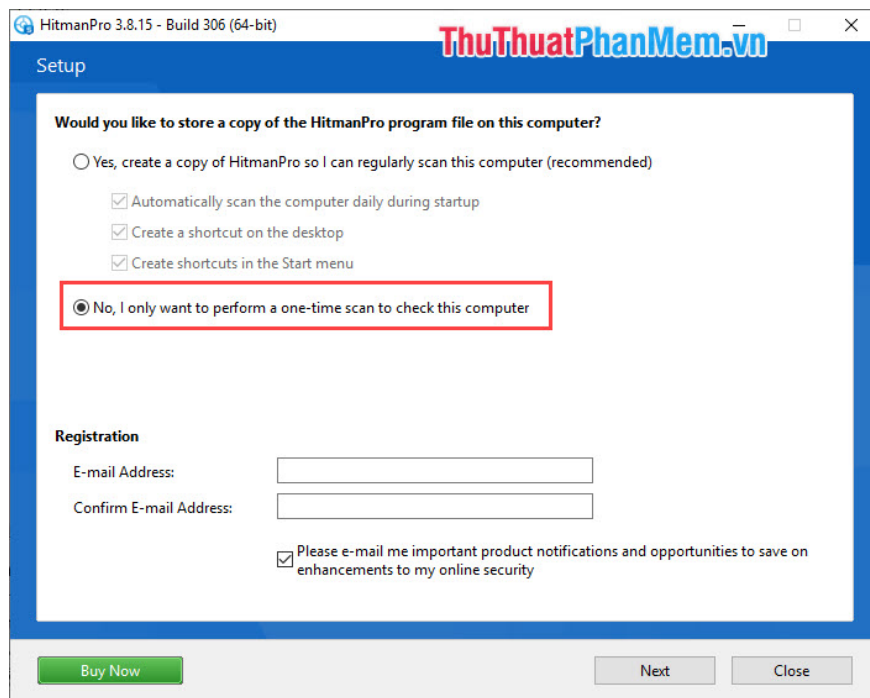

2. Heavy-duty advertising virus

For heavy and high-level advertising viruses that have deep access to users' computers, we need some specialized software to be able to destroy them. One of the effective software to handle advertising Virus is: AdwCleaner, HitmanPro, .

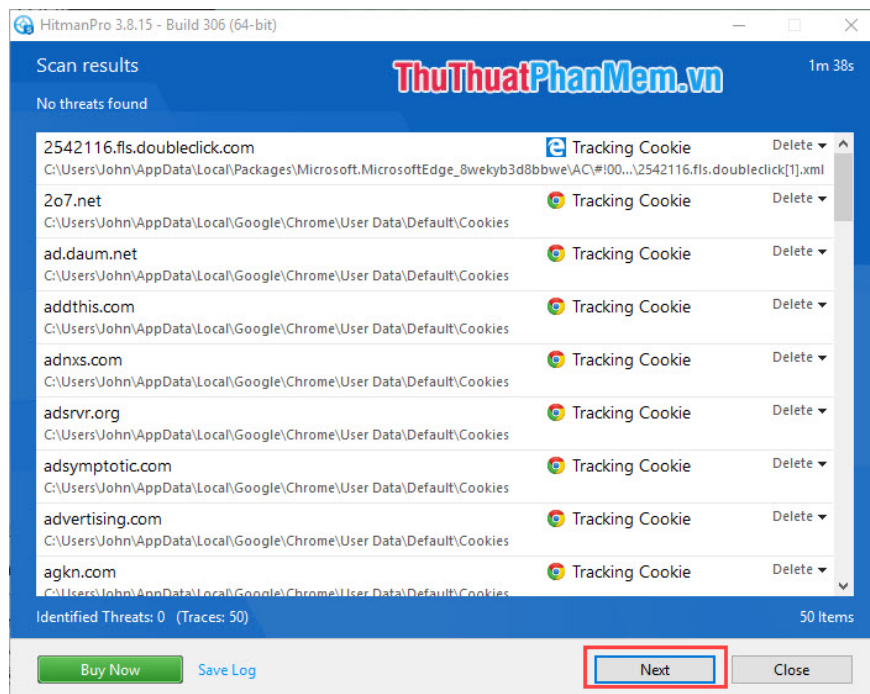

In this article Software tips guide you to use HitmanPro. With other software you do the same.

Link Download: <https://www.hitmanpro.com/en-us.aspx>

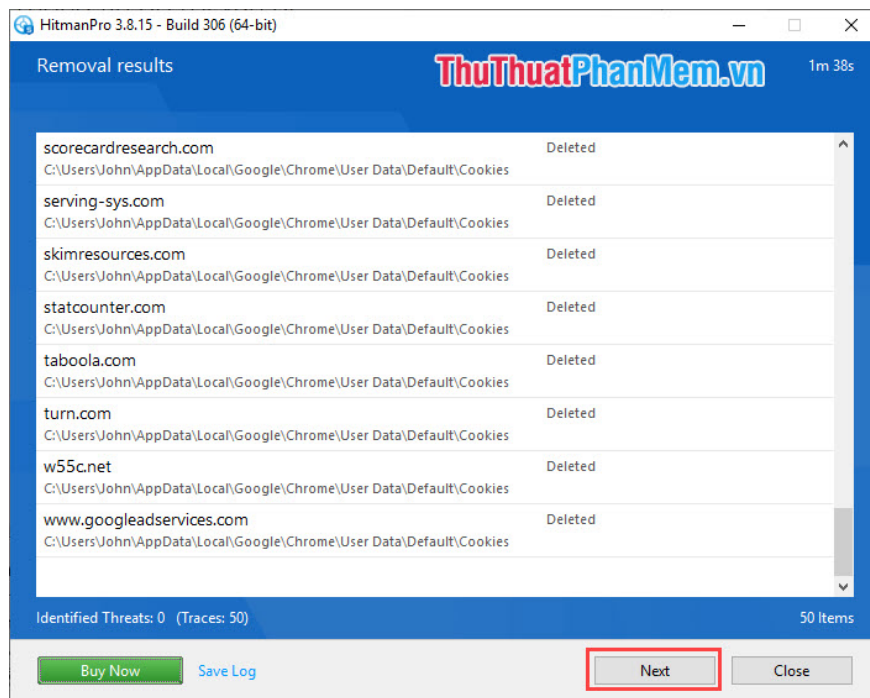

Step 1: When you use the software, we should choose the following settings to avoid the software interfering with the computer. You choose **No, I only want to perform a one-time scan to check this computer** .

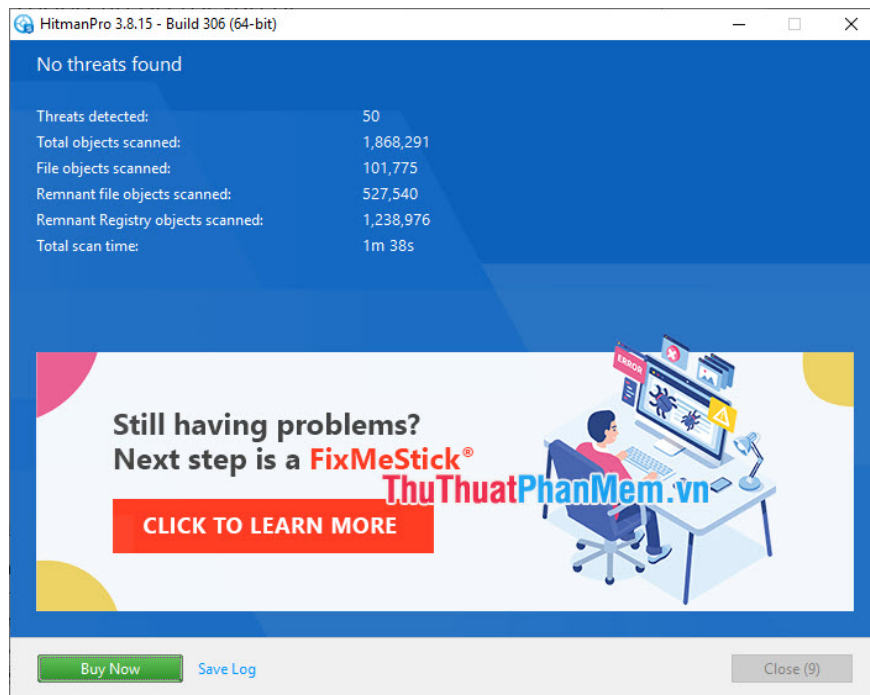

Step 2: Then the software will automatically scan for **viruses** on your computer to handle advertising problems. After scanning, select **Next** .

Step 3: The system will automatically remove all viruses that interfere with your computer.

So you have completed the virus treatment on your computer.
