

# How to handle when YouTube videos loaded with IDM is corrupted

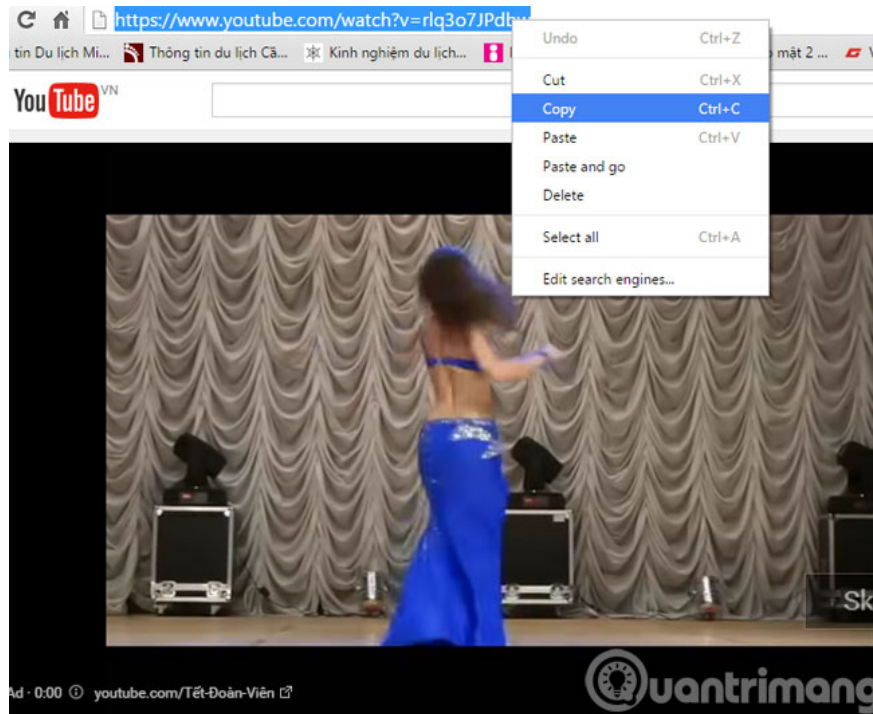

Recently, many people download YouTube videos with IDM software, which often suffers from a video error (loss of picture or loss of voice), due to the fact that this download support software usually automatically retrieves all the downloadable links to display. . Therefore, sometimes an MP4 video file will be split into both MP4 and M4A. If you do not notice and download M4A video file, you will only hear the sound and not see the image and vice versa. Please refer to how to handle the above error.
