

# How to help you clean the scale in the kettle quickly

Cleaning the dirt in the super kettle not only prolongs the life of the kettle and also increases the efficiency of the kettle.

Kettle is an indispensable item in every family today. Super warm after using for a long time often appear plaque around the warm wall, the plaque if left for long will be very harmful to our health. In order to overcome this situation and extend the life for warmth, the Network Administrator would like to share with you some tips and make use of the available items in the kitchen of the family so that it can be easily cleaned. the easiest.

## 1. White vinegar or lemon

The reason why warm pots with plaque around the walls may also be due to insufficient clean water, dirt in the water will precipitate under the warm bottom and create plaque. The main component of these plaques is Calcium carbonate, which, when given to acetic acid in lemon or vinegar, reacts, helps loosen the warm deposits, forming water and gas soluble minerals. CO<sub>2</sub>.

You just need to pour 10% vinegar or lemon into the kettle, then add water, boil as usual, during the cooking process, the residue will automatically separate from the warm wall, cool for 1 hour, then It is OK to use clean water.

## 2. Baking Soda

Most kettles are made of aluminum, so you can also use baking soda (baking soda - buy it at a bakery) to clean the plaque. You only need to add 1 teaspoon of baking soda, fill it with  $\frac{1}{2}$  of the water, boil the water for 2 to 3 minutes, which will help quickly clean the plaque on the warm walls.

### **3. Eggshell**

You can also take advantage of the eggshell right away, so you can clean the residue on the kettle. Eggshell is crushed and put in a warm, add  $\frac{1}{2}$  water into the kettle, stir with chopsticks and let it boil for about half an hour, you can pour the eggshell, clean the residue inside the warm as so you already have a clean kettle. Or you can use it warmly to boil eggs, which is also a way to reduce the residue in the bottle. After several times boiled, the scale will peel off.

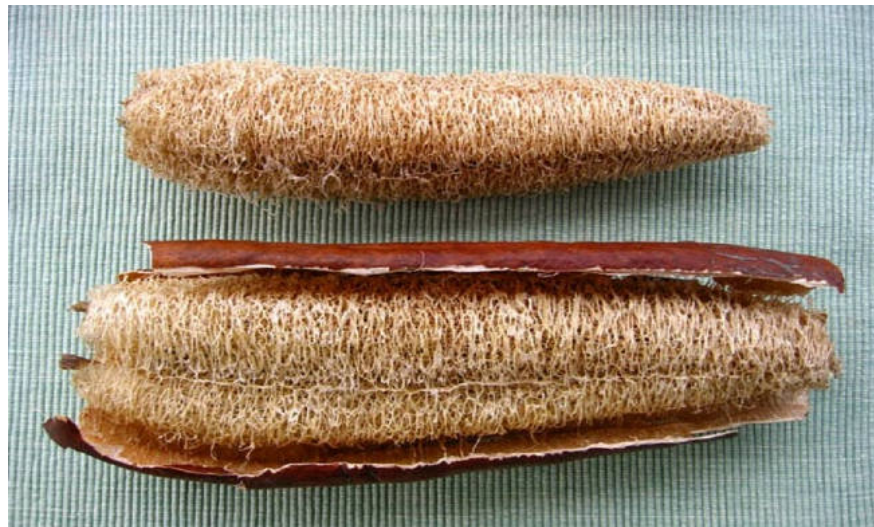

### **4. Potato peel or taro**

These things seem to be thrown away because there is no use, but if you want your kettle to have no plaque when you use it, then do the following, super fast when you first buy it, or Long time used for taro peel into 1/2 kettle, pour warm and boiled water for 10 minutes, then make sure your kettle will not be residue anymore.

If your family doesn't use taro peels, you can also use potato peels instead, which is similar to taro peels.

## 5. Loofah

You only need to put the melon fiber in warm, fiber loofah will be like a water filter, help your family's kettle will absolutely no longer have sludge. However, it should be noted that it is necessary to change the fiber of the melon periodically and keep the fiber clean and clean before putting it in the pot.

## 6. Na-tri salt

In any family, there will be salt, so if you want that hateful plaque to disappear from the warmth, you just need to put some salt into the kettle and let the water boil as usual, after a while The dirt in the kettle will automatically disappear, now you just need to wash it off.

### **Some notes when preserving warm speed:**

1. Always unplug after using warm.
2. Do not leave the water inside the kettle too long to avoid scaling and rust.
3. After use, turn the kettle upside down, let it dry.
4. Place the kettle and the electric stand in a cool, clean, dry place.

Hopefully with the tips above, users can overcome the plaque formed in the super speed kettle.
