

# How to hide any application on Android phone to avoid being exposed

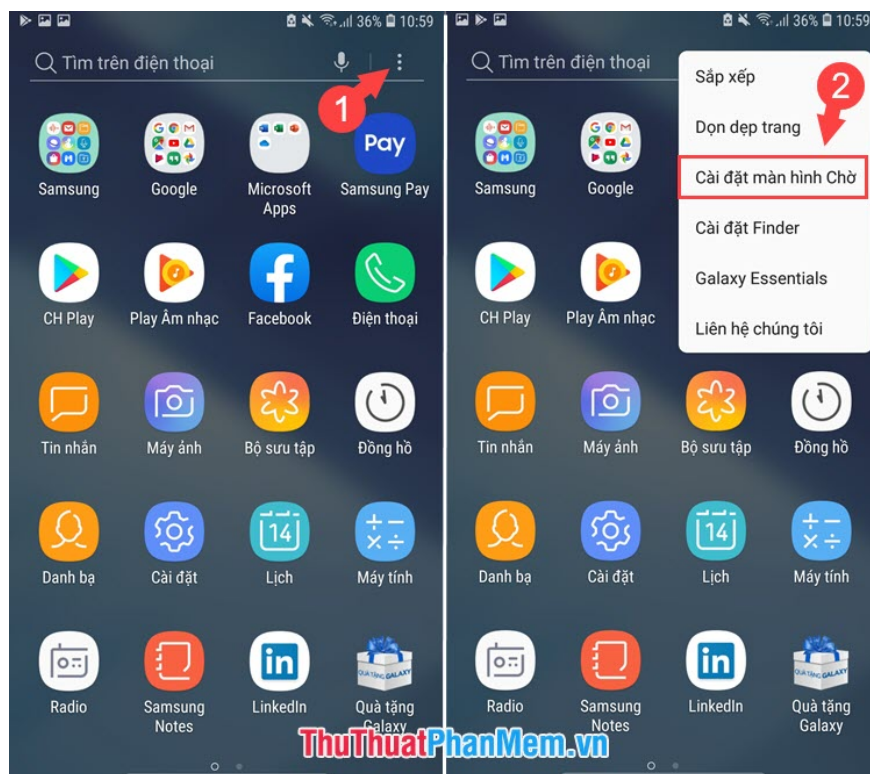

Hiding apps helps us avoid strangers or children who accidentally open the app and peek or delete your important information stored in the app. TipsMake.com guides readers how to hide any application on Android phones to avoid being exposed.

Hiding apps helps us avoid strangers or children who accidentally open the app and peek or delete your important information stored in the app. In the following article, TipsMake.com guides you how to hide any application on Android phones to avoid being exposed.

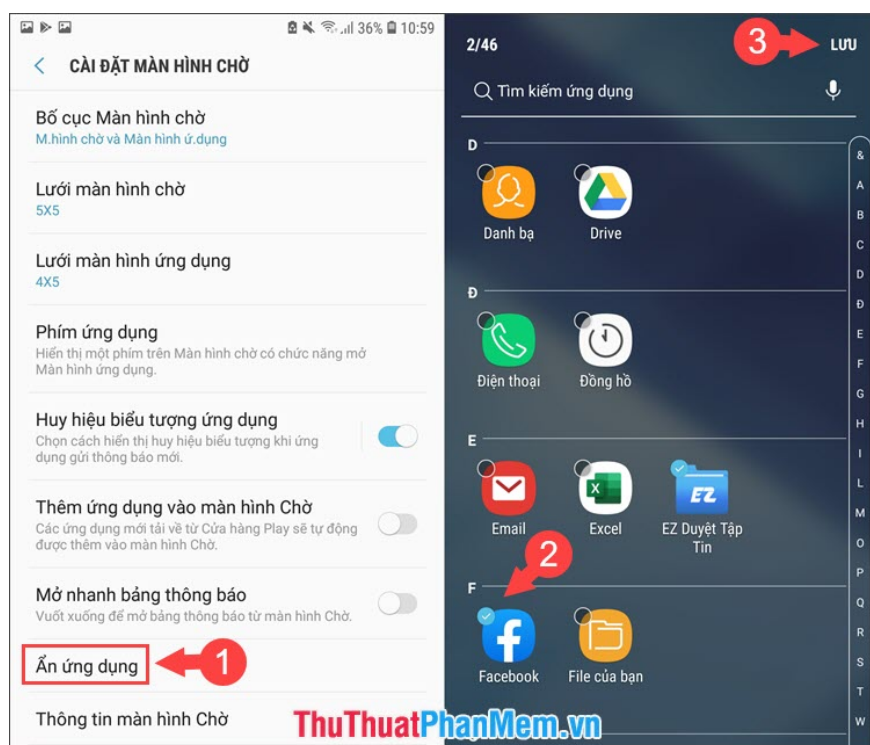

## 1. For Samsung phones

**Step 1:** At the main screen of the application, you touch the three dots icon (1) in the top corner => Home screen settings (2) .

**Step 2:** You select the **Hide application** (1) and select the application to hide. In the article I will hide the **Facebook** application (2) and then click **Save** (3) to hide the application.

After hiding the application, you return to the main screen and check that the hidden application is not successful.

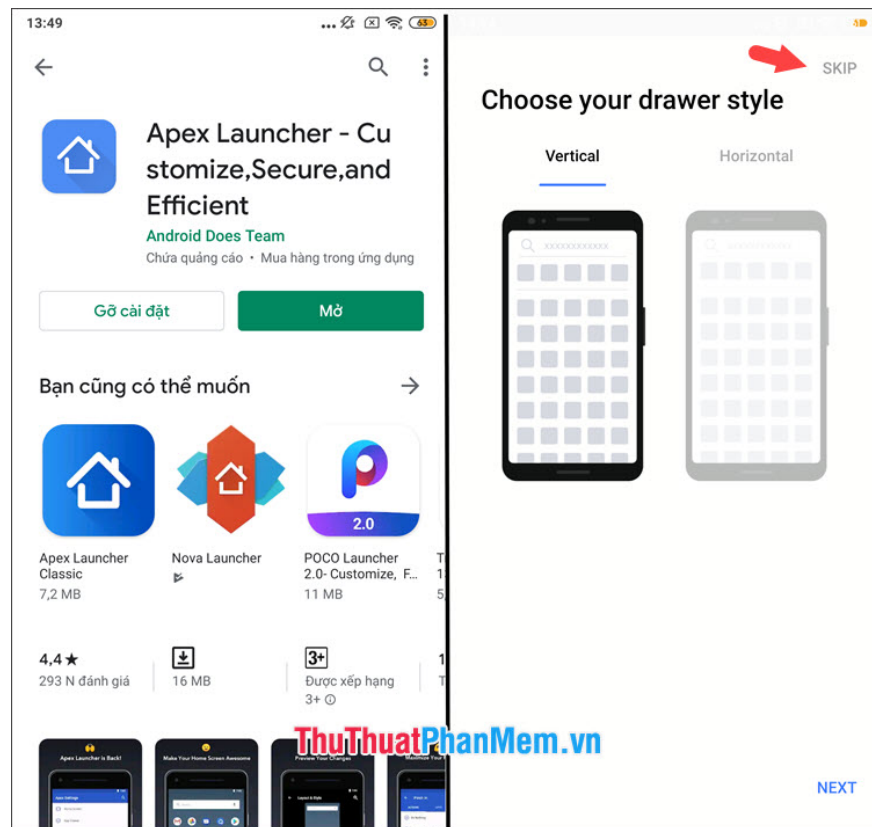

## 2. Hide applications on devices using Android Launcher (Xiaomi, Huawei .)

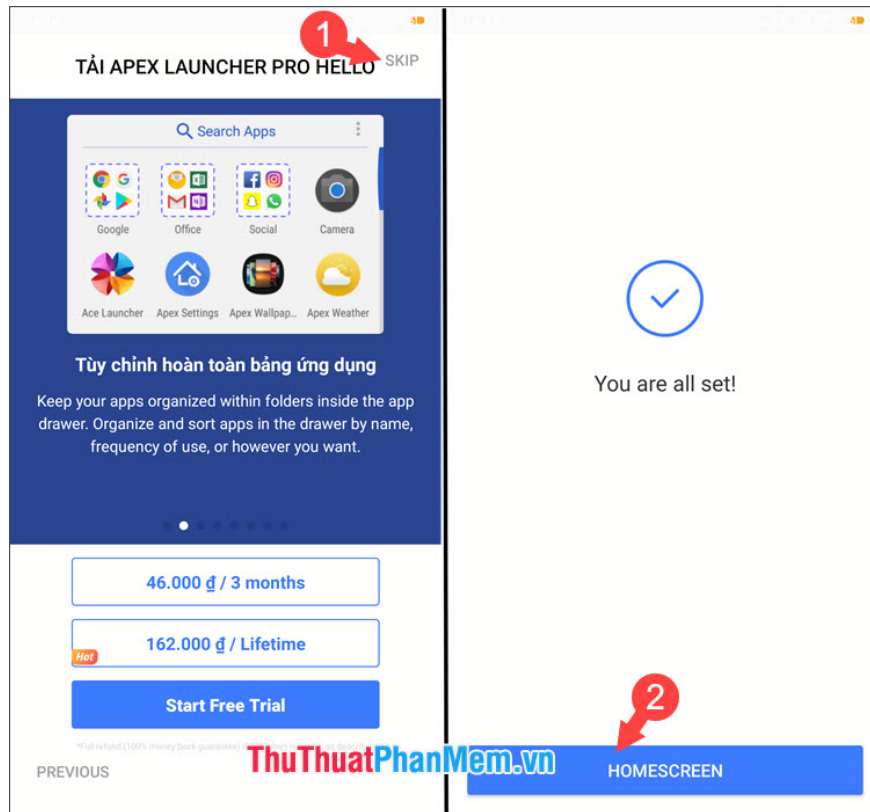

For devices using customized Android Launcher, we will hide the application by using an application called **Nova Launcher** or **Apex Launcher** to change the interface. In the following tutorial, I use the **Apex Launcher**

application to hide the application. Link to download **Apex Launcher** here: <https://play.google.com/store/apps/details?id=com.anddoes.launcher&hl=en>

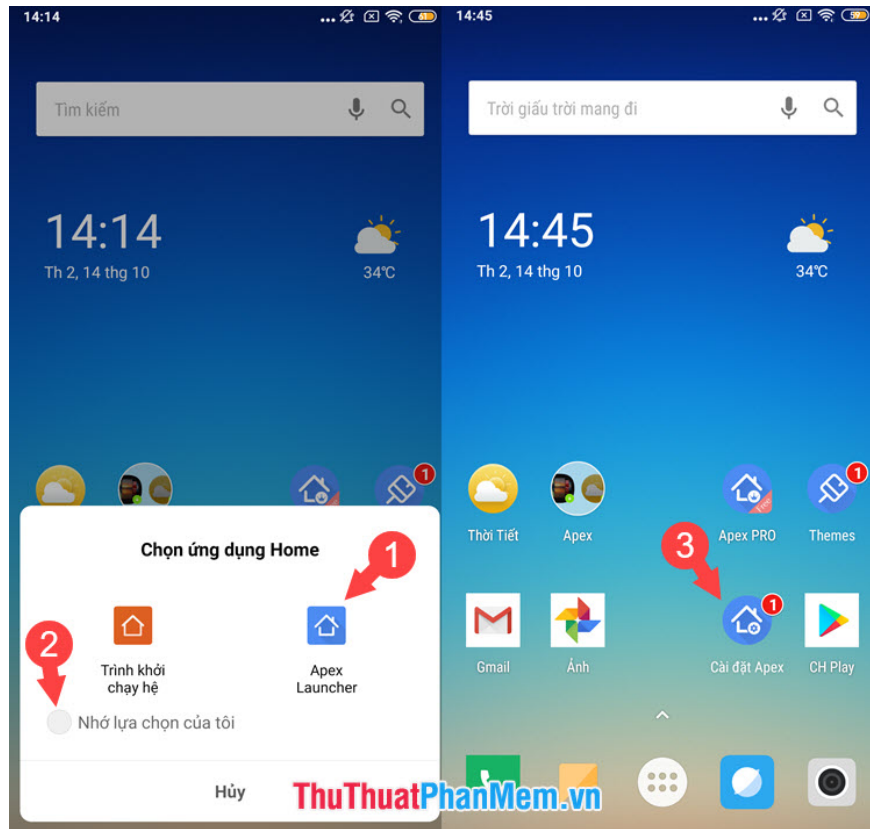

**Step 1:** On the first launch, **Apex Launcher** requires us to set up the interface for Launcher, you can skip and let the software set itself by clicking **Skip**.

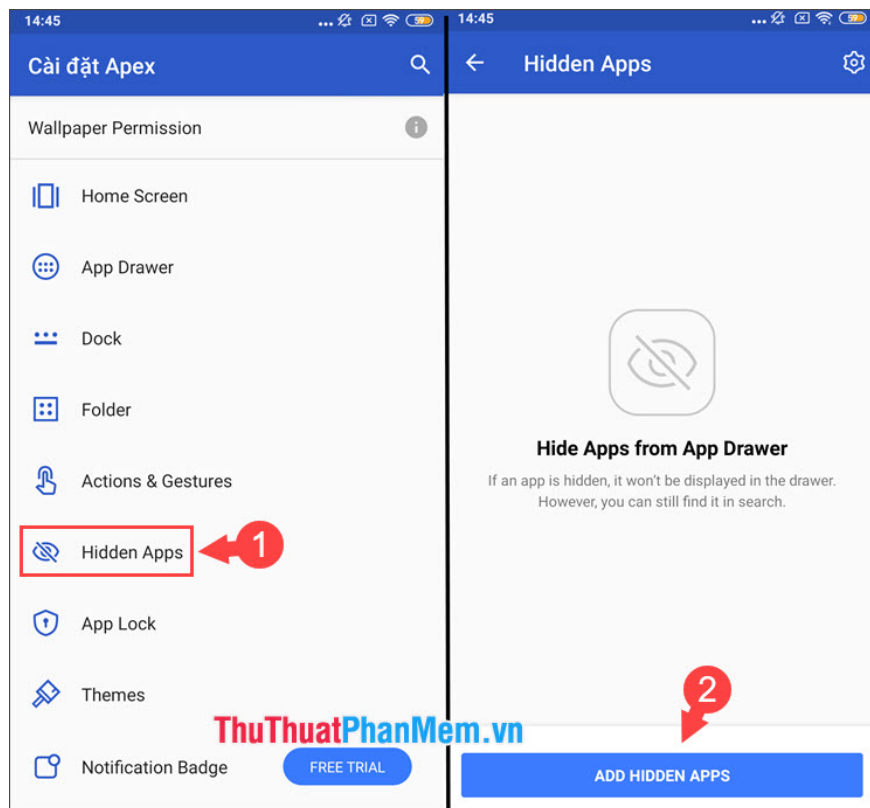

**Step 2:** The software will suggest that we upgrade to the Pro version with more attractive features. If you do not need to upgrade, you tap **Skip** (1) to skip. After the software is done setting up with the message You are all set! is done, press **HOMESCREEN** (2) to return to the main screen.

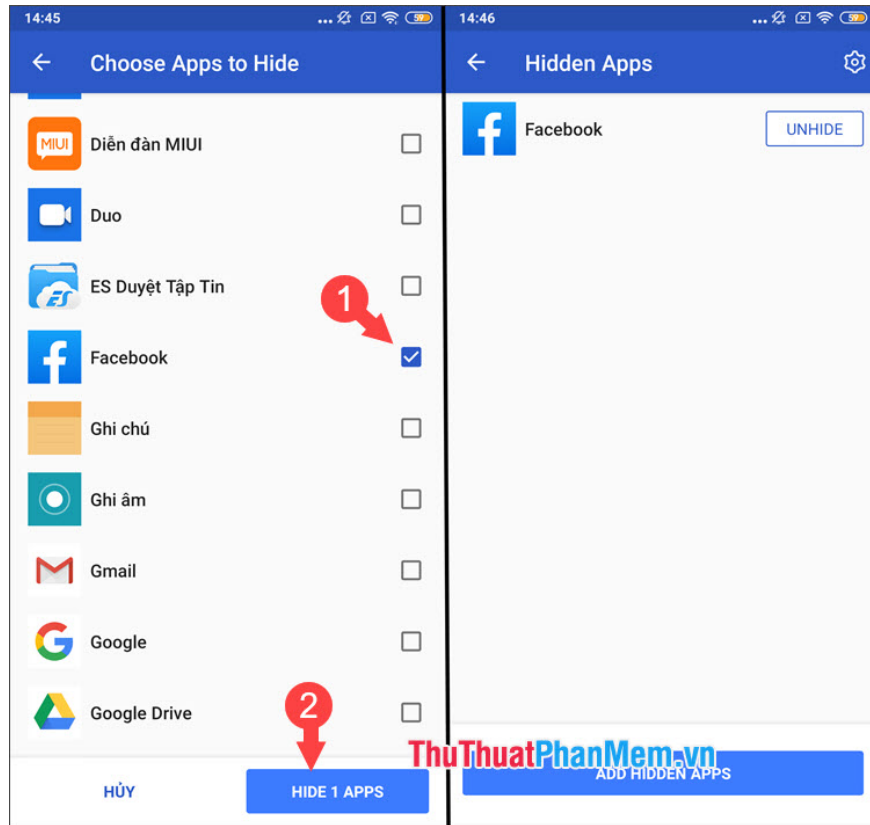

**Step 3:** After returning to the main screen, **Apex Launcher** asks you to set up the main interface for the device. You choose **Apex Launcher (1)** => **Remember my choice (2)** . After setting the Apex Launcher interface, click **Apex Settings (3)** to open the settings.

**Step 4:** Select the item **Hidden Apps (1)** => **Add hidden apps (2)** .

**Step 5:** You choose the application to hide in the list. In my article, take the **Facebook** application (1) as an example. Then you press **HIDE 1 APPS** (2) to hide that application. The hidden application will appear in the list below, to unhide it, press **UNHIDE** to unhide it.

With instructions to hide applications on Android phones in the article, we can easily "hide" personal information, important applications without worrying about strangers "sniffing". Good luck!
