

How to identify and find the right font used on images

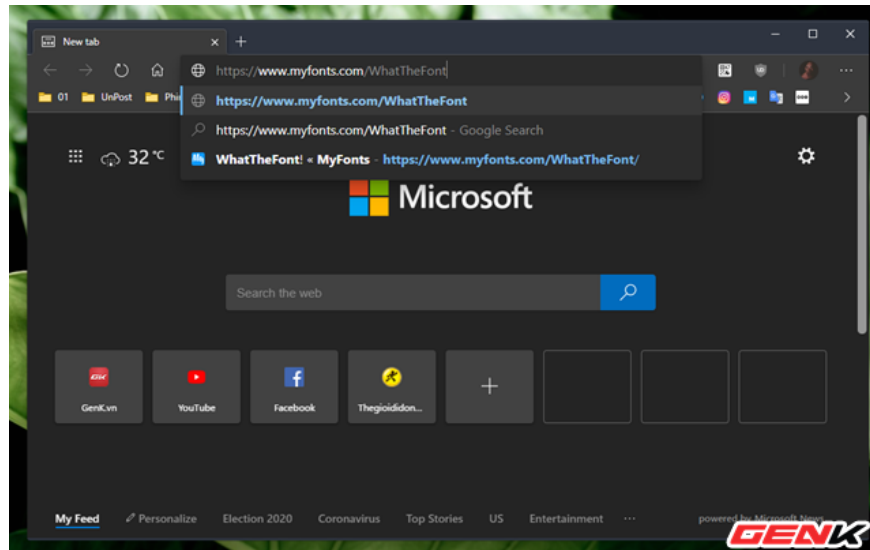

Without the software, you can still identify and find the right font used in the image.

While surfing the web, you may come across one or more "pretty cool" fonts used on certain images and you want to own them so you can use them for future purposes. ?

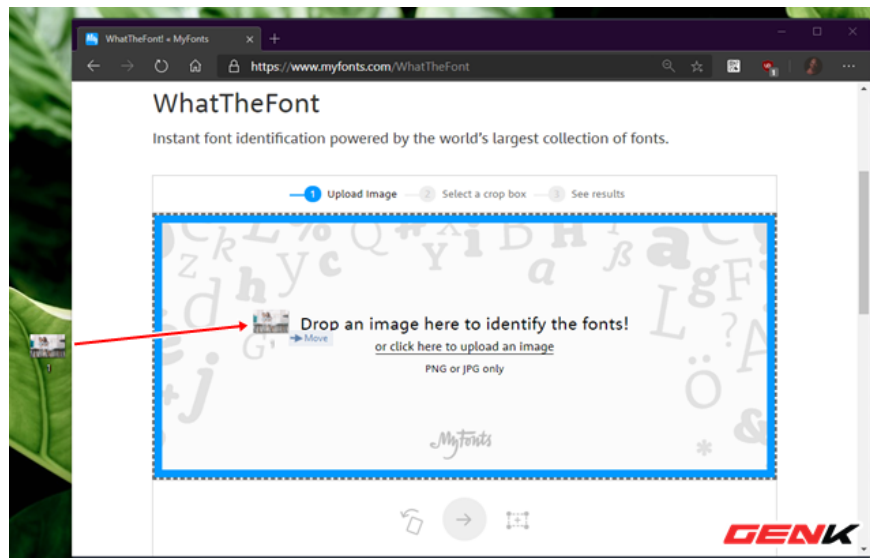

This situation is quite common and you can easily identify and **find the right font** used on images without having to install any software, specifically as follows.

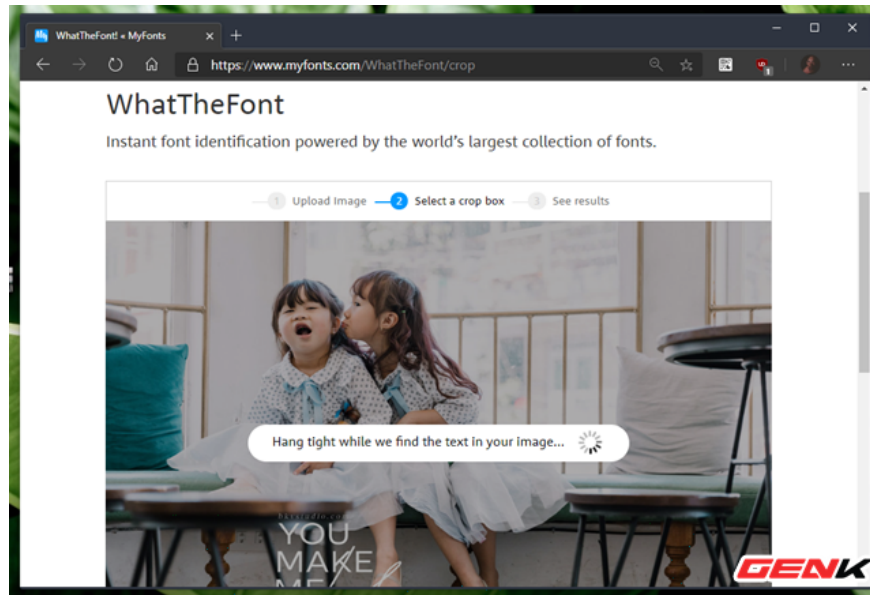

Step 1: Download the image containing the content using the font you like to your computer.

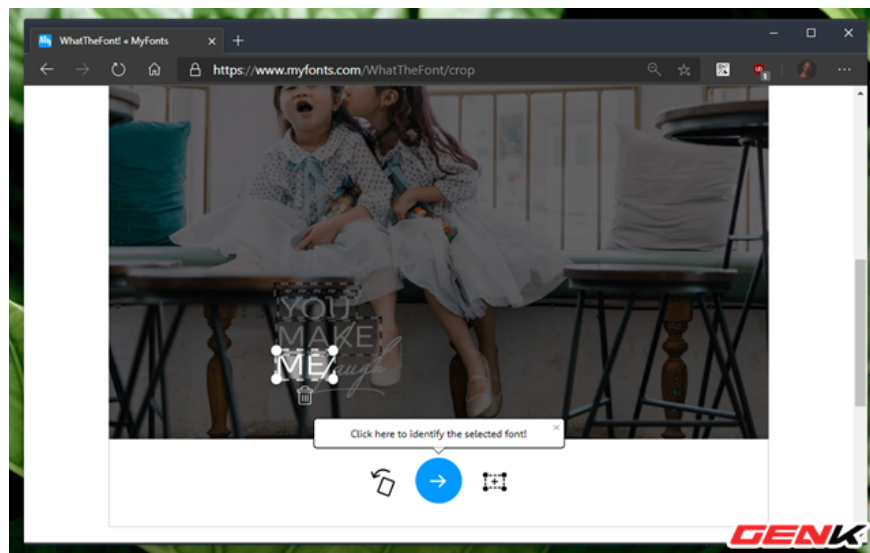

Step 2: Start the web browser on the computer and visit "WhatTheFont!" via this link.

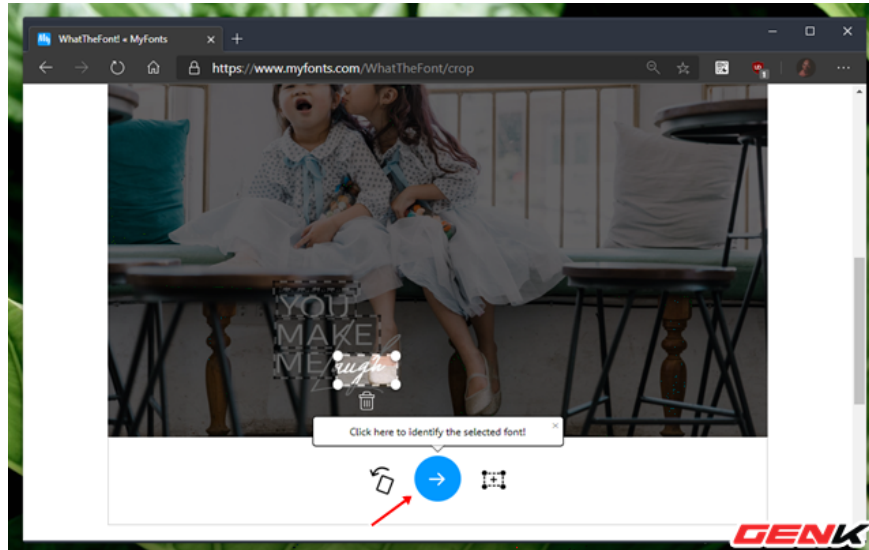

Step 3: Drag and drop the image to identify the font into the upload area on the website.

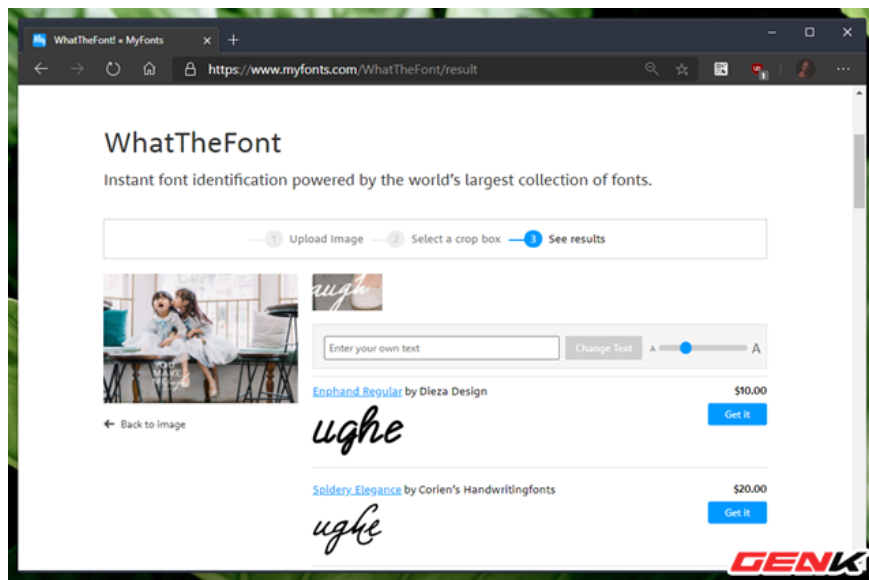

"WhatTheFont!" will proceed to identify fonts from the image. The process is very quick.

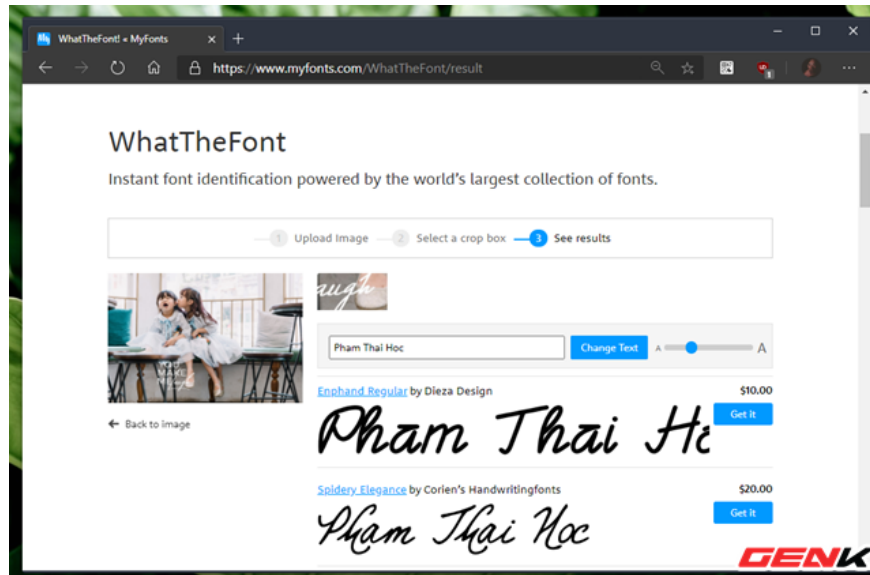

Step 4: When the identification is complete, "WhatTheFont!" will display the area containing the content using the font on the image.

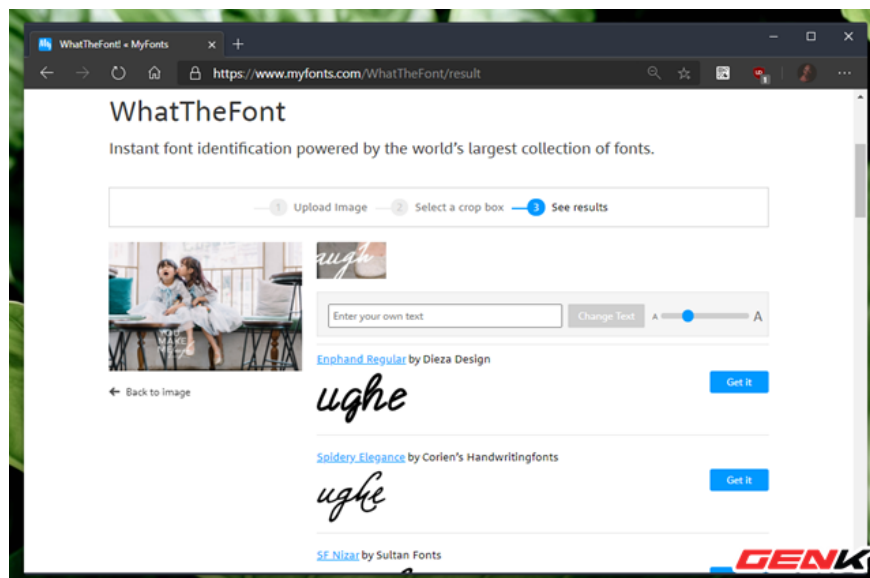

You proceed to select the content using the font on the image you need and click on the green scroll button icon below.

Step 5: "WhatTheFont!" will list the fonts that this service finds for the font used in the image.

You can enter the text in the box above the font list to test if you want.

Once you've determined the correct font you need, now you just need to download it to your computer to use.

Very simple, right?
