

# How to identify the most accurate and fake iPhone headphones

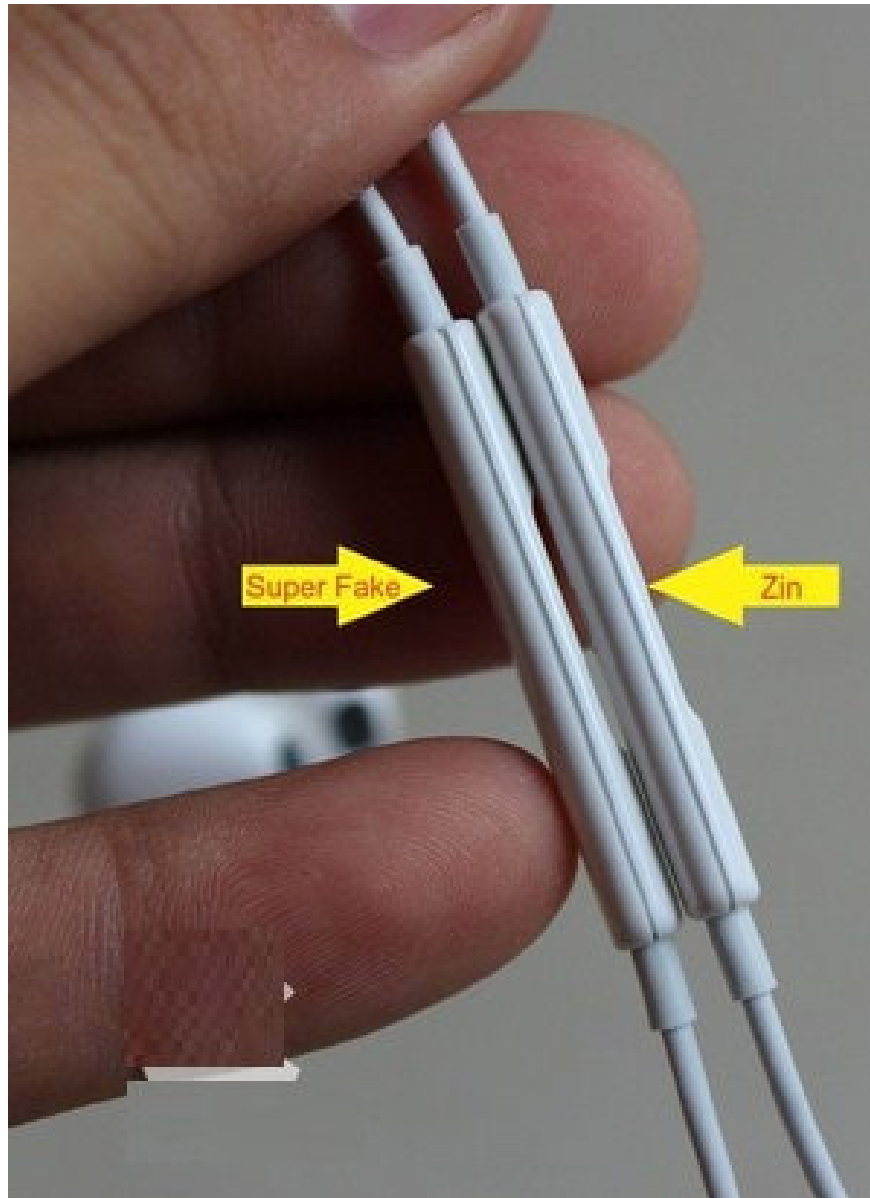

Even if the iPhone headset is 99.9% genuine compared to a zin headset, the remaining 0.1% is still enough to let you distinguish real and fake goods with tips and tricks. small below.

Not only charging iPhone, you are also very easy to buy iPhone headphones imitation. Currently, in the market of phone accessories, iPhone headphones are increasingly produced so sophisticatedly that they look like real from design to function, very difficult to identify. However, saying this does not mean we do not have a way to identify standard headphones from Apple. Although it has a 99.9% genuine counterfeit compared to zin headphones, the remaining 0.1% is still enough to let you distinguish real and fake goods with the following tips and tricks. . Let's see 8 ways to identify real and fake iPhone headsets now!

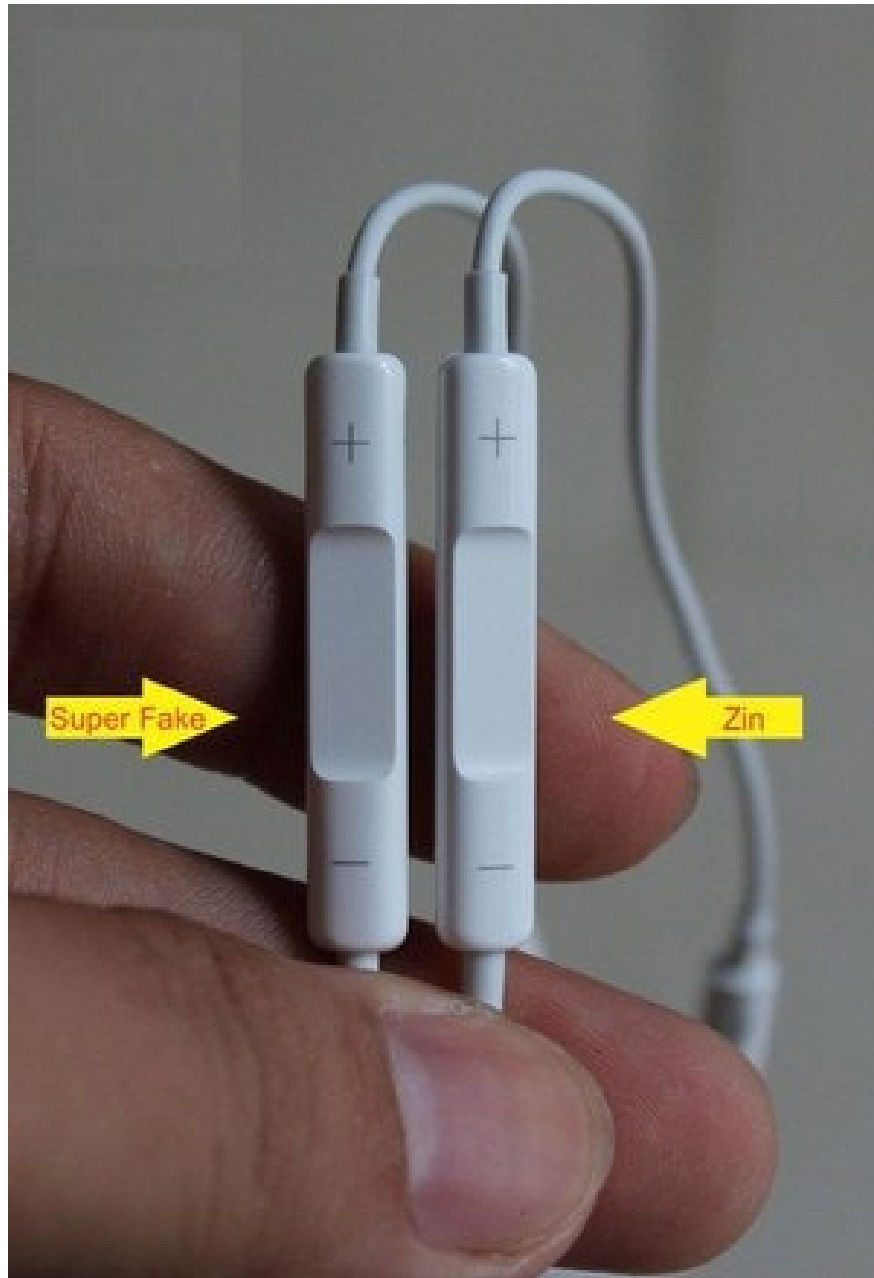

1. Differentiate charger, genuine and fake iPhone cable
2. How to distinguish real iPhone X, fake company and Taiwan
3. Why on iPhone headphones appear small holes?

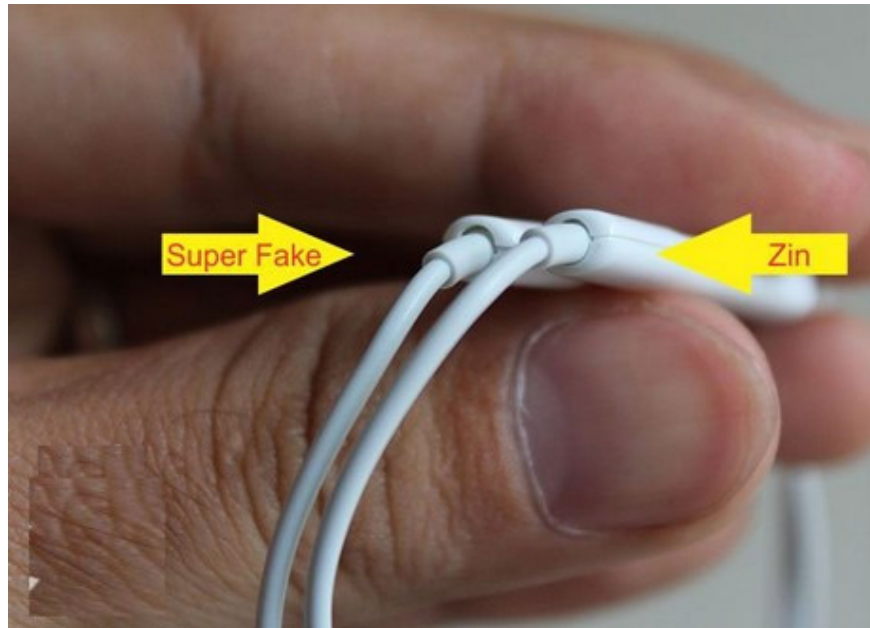

1. Talking about the sound quality of the iPhone headset, the fact that headphones fake is only a little bit zin a headset about 8/10. Normally, the iPhone fake headset will cost around 250,000 VND, while the standard iPhone headset is 450,000 VND.

2. Put the standard iPhone headset and fake side by side, you will see that the genuine item has pure white color and is different than fake. In addition, rubber material on the goods will have elasticity and quieter than fake products, relatively difficult to distinguish but if you pay close attention you will notice.

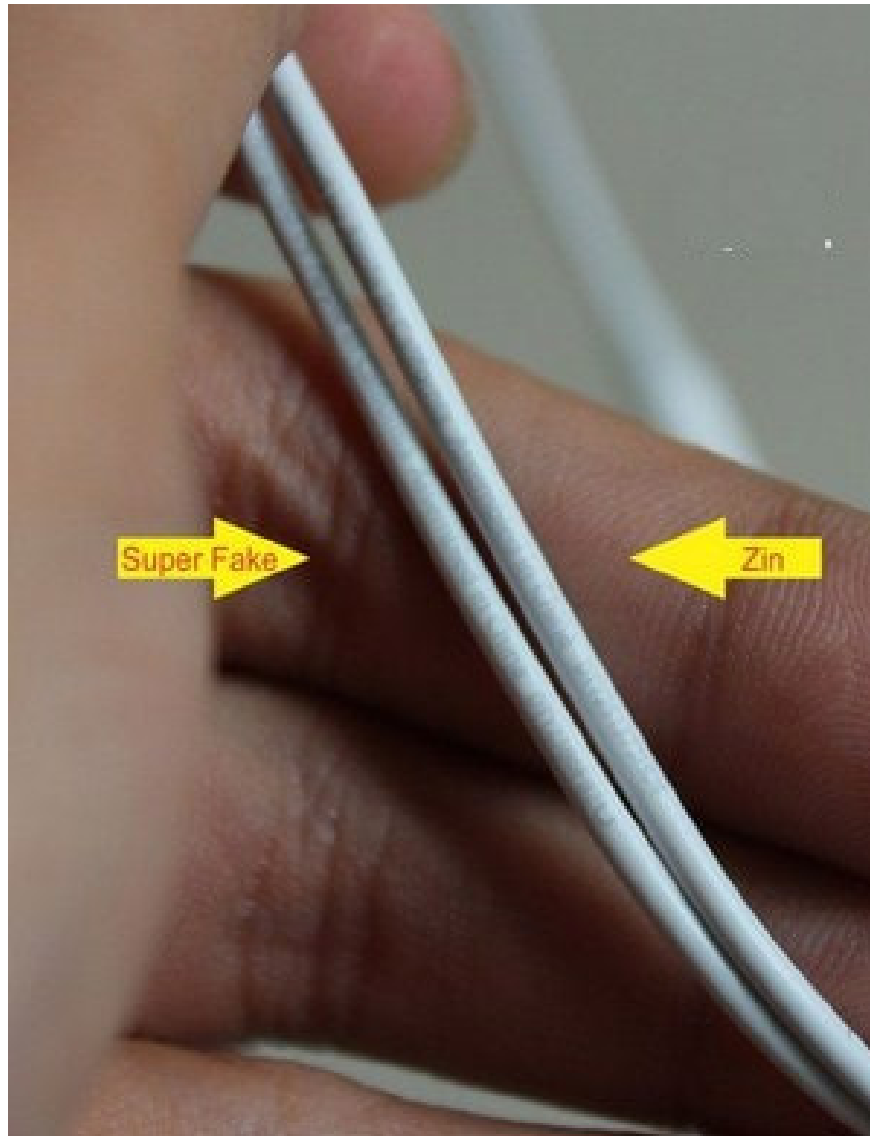

3. The volume control in headphones fake although designed with a high fit, but the truth is that it still cannot fit with Apple headphones.

4. Next, the printed text on the body " *Designed by Apple in California Assembled in China*". Fake headphones will not fade like on the headset zin and shaving will not work.

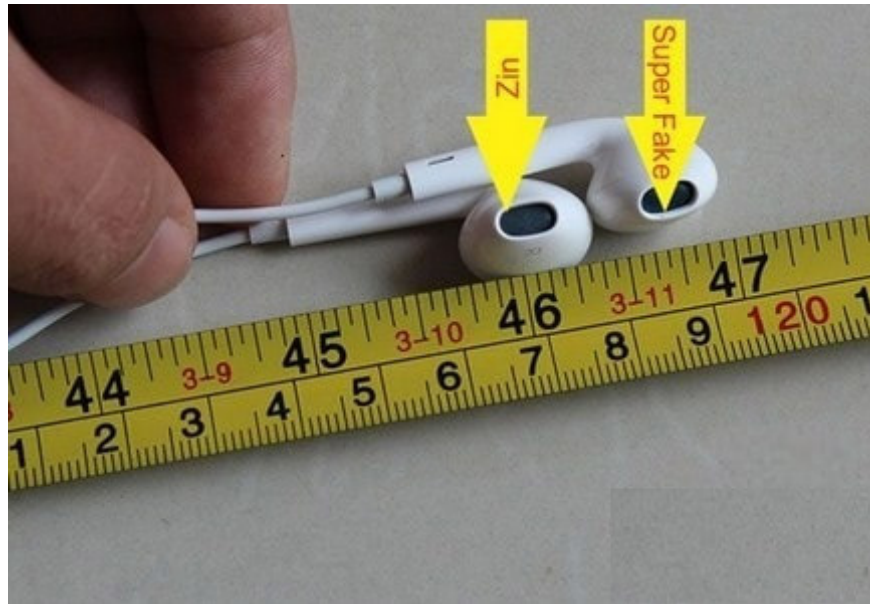

5. See the fake iPhone headset, you can also pay attention to the speaker membrane. Specifically, the standard iPhone earpiece speaker will be gray and see 2 holes inside the speaker membrane. In contrast, fake headphones will be dark blue and of course not see the color inside.

6. Add a point to distinguish Apple's standard headset is that, the standard iPhone headset makes it very tight and the headset fake makes it slightly open.

7. If the headset is zin-based, it will be about 118 cm long, the fake headset is usually longer than 1cm which is 119cm.

8. And finally, the standard iPhone headset when folding the cord will retain its elasticity and will not bend down, but the fake headset will be folded down like in the picture.

Hopefully, the real and fake iPhone headphones that the Network Administrator has shared above will be useful for you when you need to buy iPhone headphones. In addition, to ensure the purchase of genuine goods, you should go to the store selling reputable phone accessories offline.
