

# How to include multiple applications in one window

Multrin is a tool that allows to use multiple applications and software on the same computer window.

The multi-tab opening feature on the browser helps users a lot when you browse the web on different websites. And in some versions of Windows 10, the feature Sets feature has been added to the same window and divided into different tabs. In case your computer does not have this feature, you can use Windows TidyTabs software, Groupy software that the Network Administrator has introduced.

In this article we will introduce more to readers of the Multrin tool also has the same features as above. We can add many open applications on the computer to open the same window in Multrin's interface. Combining or splitting application windows is very simple. The following article will guide you how to use Multrin to include application tabs and a window.

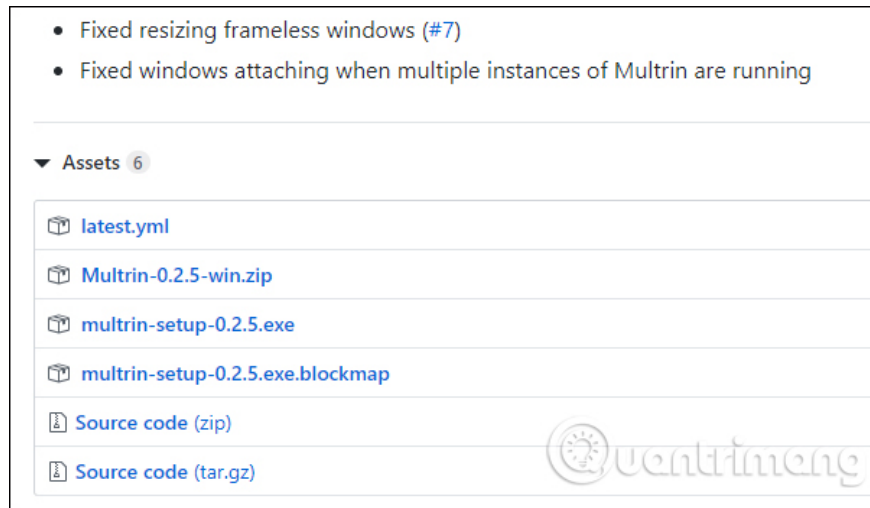

1. 3 steps to arrange desktop screen with Rainmeter
2. Manage more compact Desktop monitors with Fences
3. How to append to an icon on iPhone
4. How to manage files in tab format on Windows 10

## Instructions for using Multrin include the application tab

### Step 1:

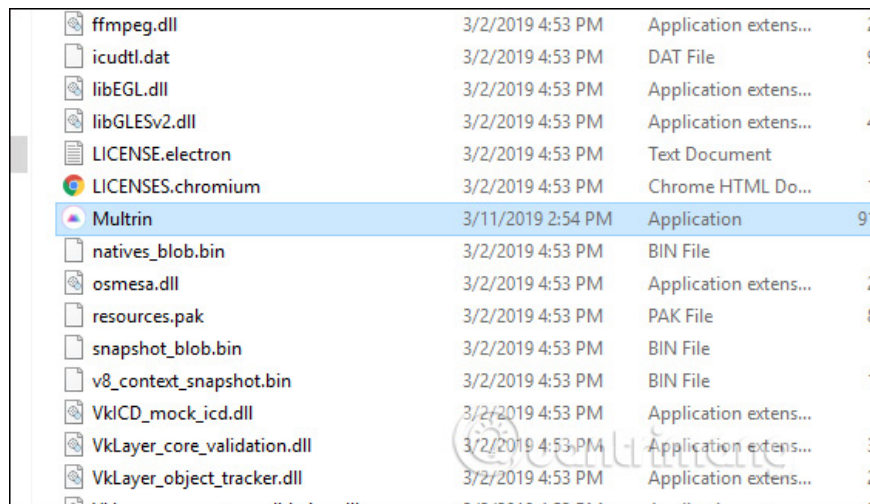

To download Multrin users access the link below. Multrin is free and open source software, the latest version is currently 0.25. Users can download it in zip or exe file format.

1. <https://github.com/sentialx/multrin/releases>

### Step 2:

After downloading the file, you only need to click on the installation file to use it without having to perform multiple installation steps like other software.

### Step 3:

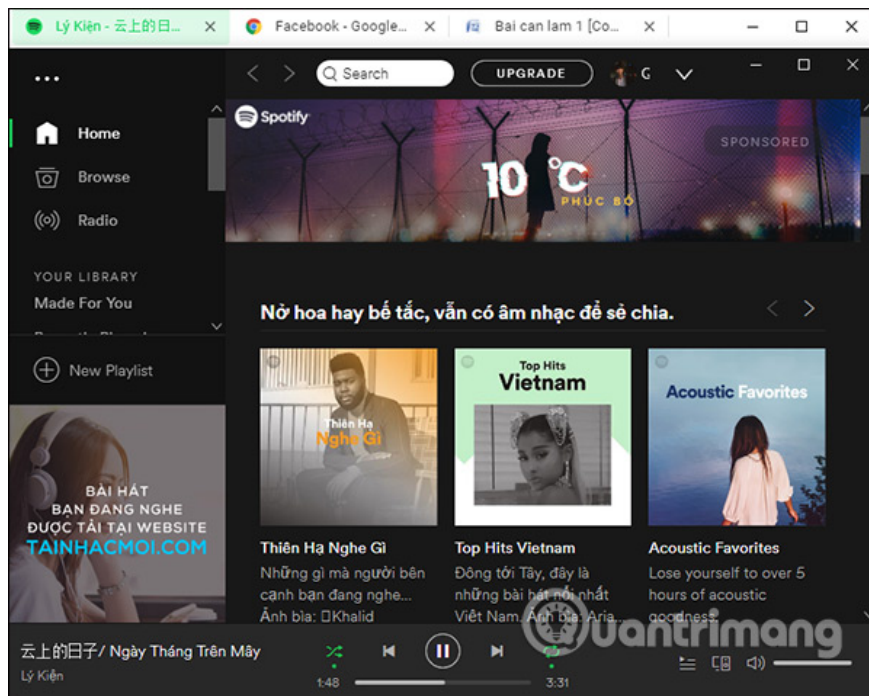

At Multrin interface, the interface of Dop windows here is displayed to drag the application tab here.

#### Step 4:

Now the user just **drags the application window to the Multrin interface**. The result of that application will fit in the Multrin interface. Continue dragging the other application tab into the interface of Multrin. Each application will be a tab on Multrin's window. Each tab has an application name for users to easily manage.

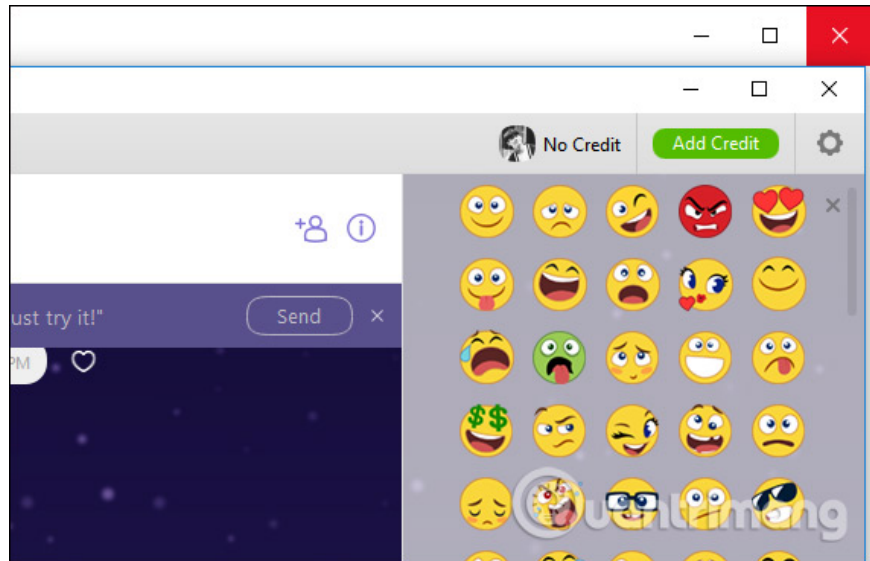

The software installed on Windows when added to Multrin will hide the icon name of the Taskbar bar, which will only appear on Multrin's interface. This feature does not apply to UWP applications on Windows Store.

#### Step 5:

To **separate an application interface, the software from Multrin's interface** has a lot of different ways to do it, press the X button at that window application tab, click the Minimize button of that application window or simply just It is necessary to drag the application window outside the Multrin interface.

If you want to split the entire application tab from the Multrin interface, users press the close button of Multrin to close the tool and finish.

Multrin is very simple to use and there are not too many aggregation options or split application tabs, the software is included on Multrin. You just need to drag in or pull out application tabs, software interface to merge into one window or split to operate independently as before.

I wish you all success!
