

# How to increase speaker volume with Sound Booster most effectively

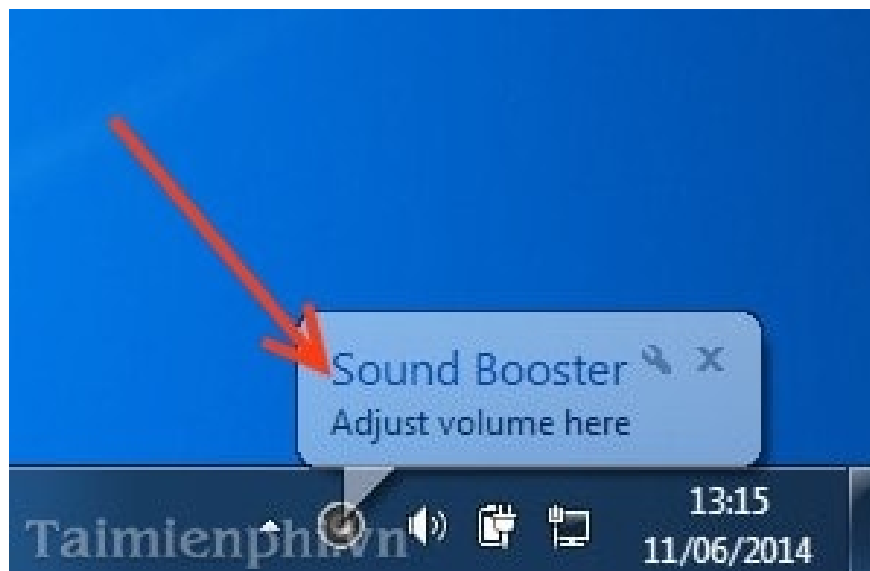

Sound Booster is a software that amplifies sound on the computer, allowing the speaker volume to increase up to 500% compared to the default level. Users can easily adjust the volume according to their needs without worrying about distortion.

Sound Booster helps you increase the speaker volume beyond the system's limit without changing the hardware. Learn how to use this software to improve the sound quality when watching movies and listening to music on your computer.

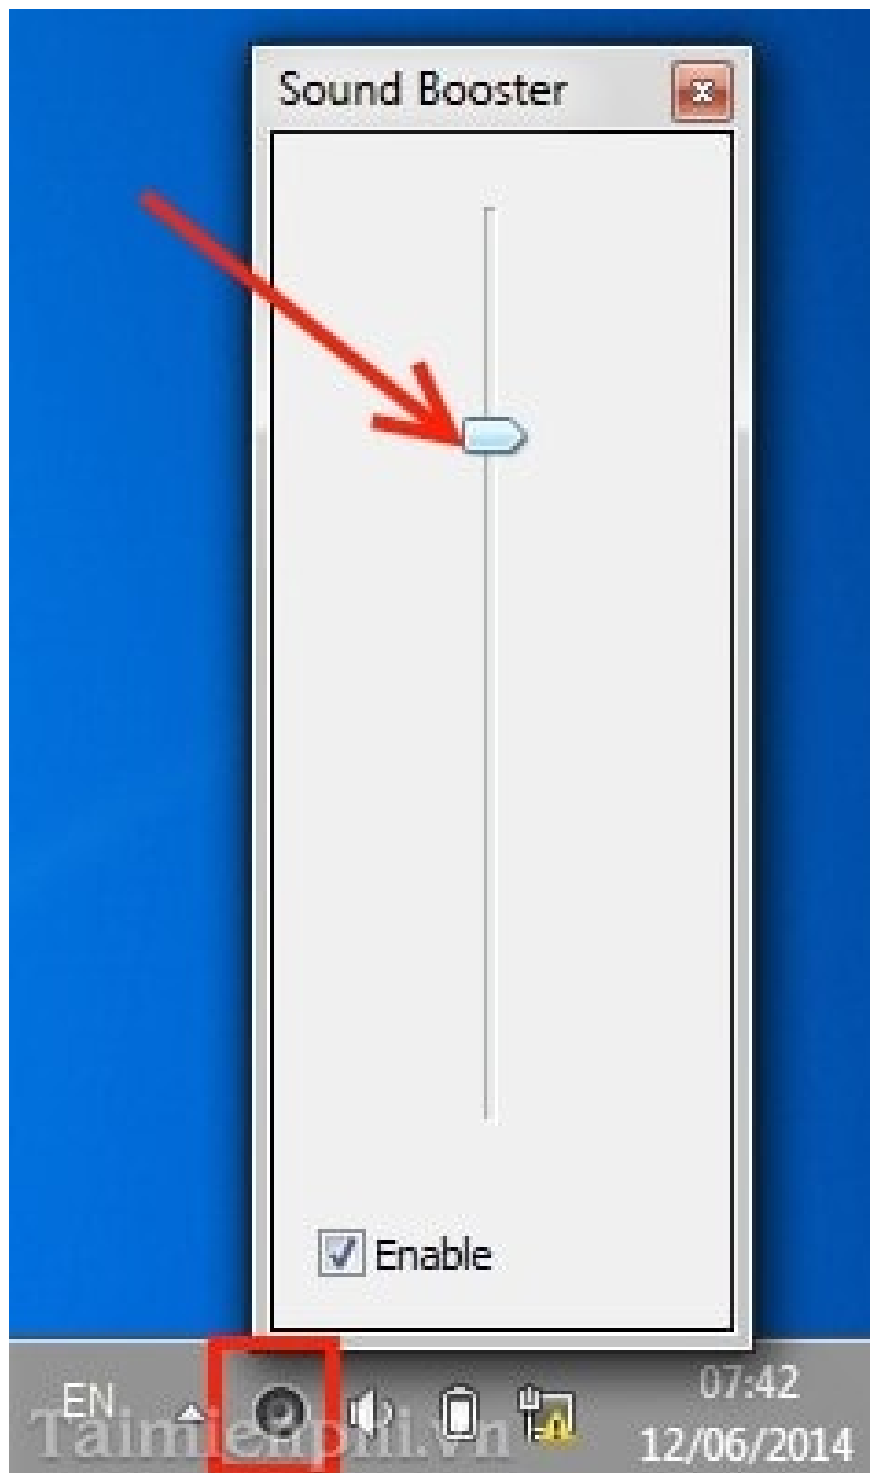

## Increase speaker volume with Sound Booster

*Step 1 : Download some **Sound Booster** settings*

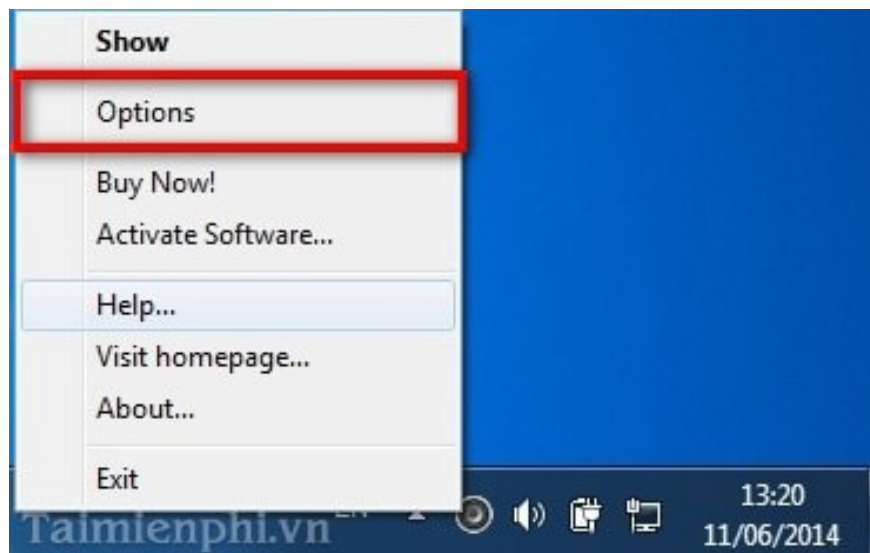

After downloading, run the exe file under **Run as administrator** and install normally. After installation, the software icon will appear on the **Taskbar** .

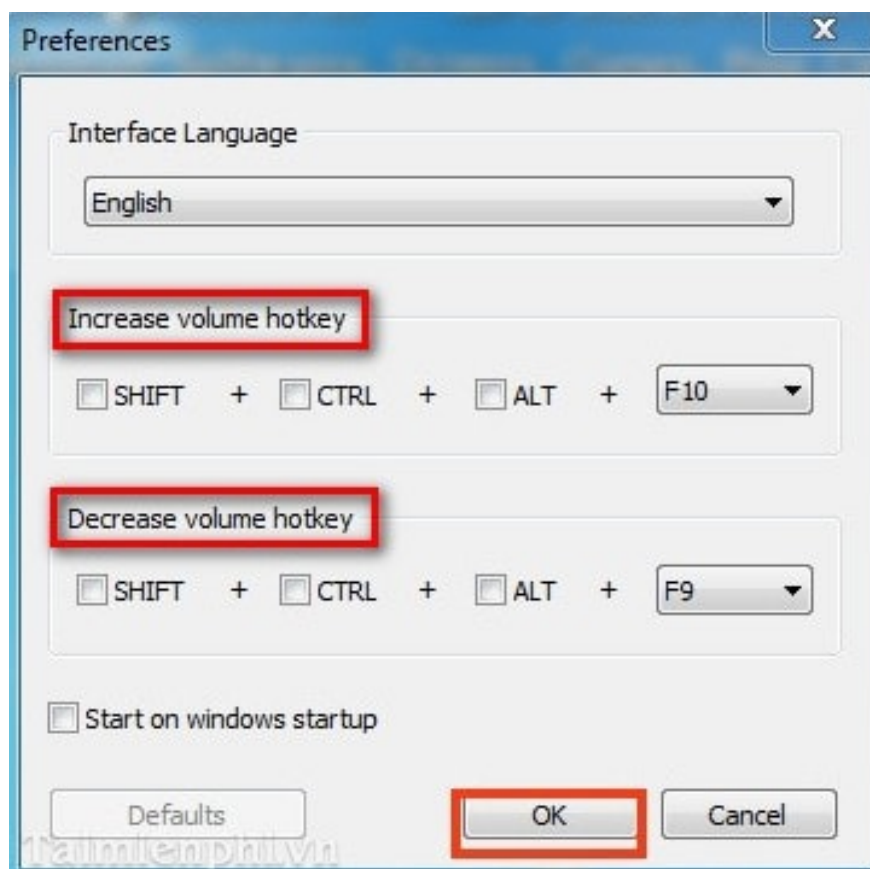

*Step 2: Click on the **Sound Booster** icon to adjust **the Volume** by pointing the mouse to the slider and dragging up to increase the sound - dragging down to decrease the sound.*

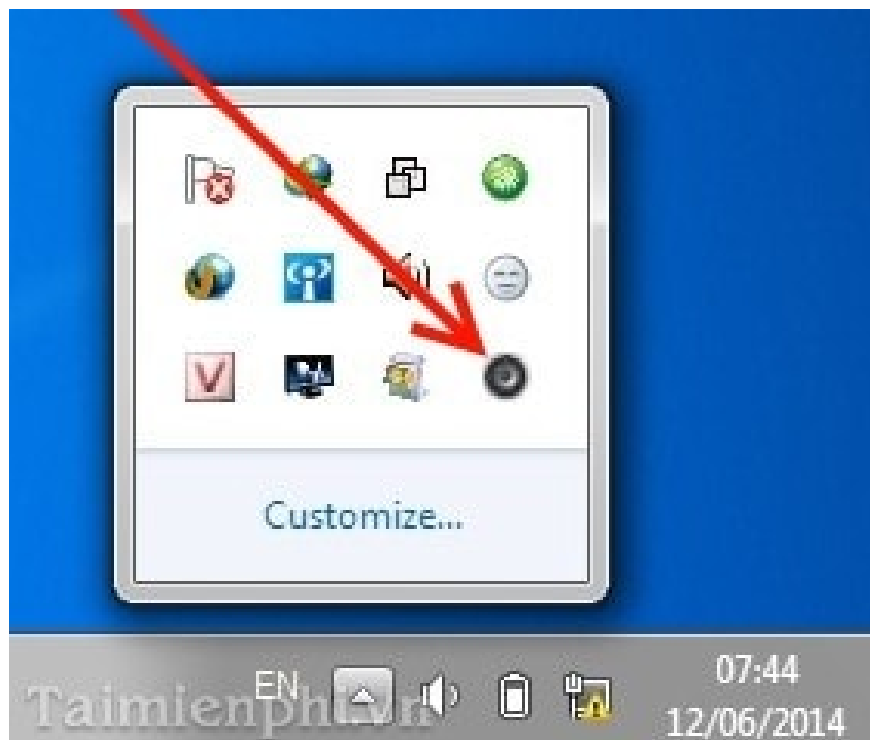

Step 3 Right-click on the icon and click **Options** to adjust.

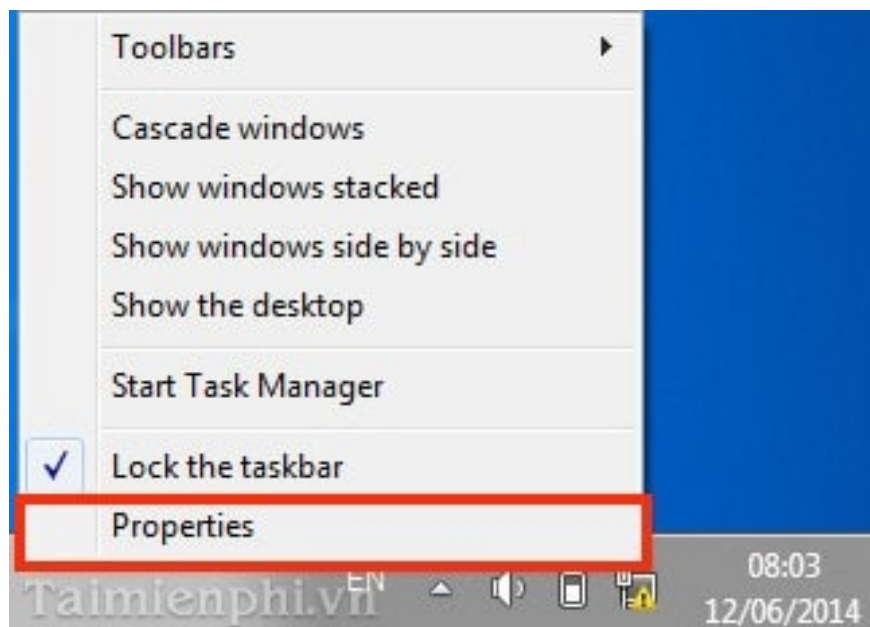

Step 4 A **Preferences** panel appears with options for you to choose from such as selecting the **Interface Language** , increasing the volume with the **Increase volume hotkeys** , decreasing the volume with the **Decrease volume hotkeys** .

Step 5 If you don't want the icon to appear on the task, you can drag the arrow on **the Task** .

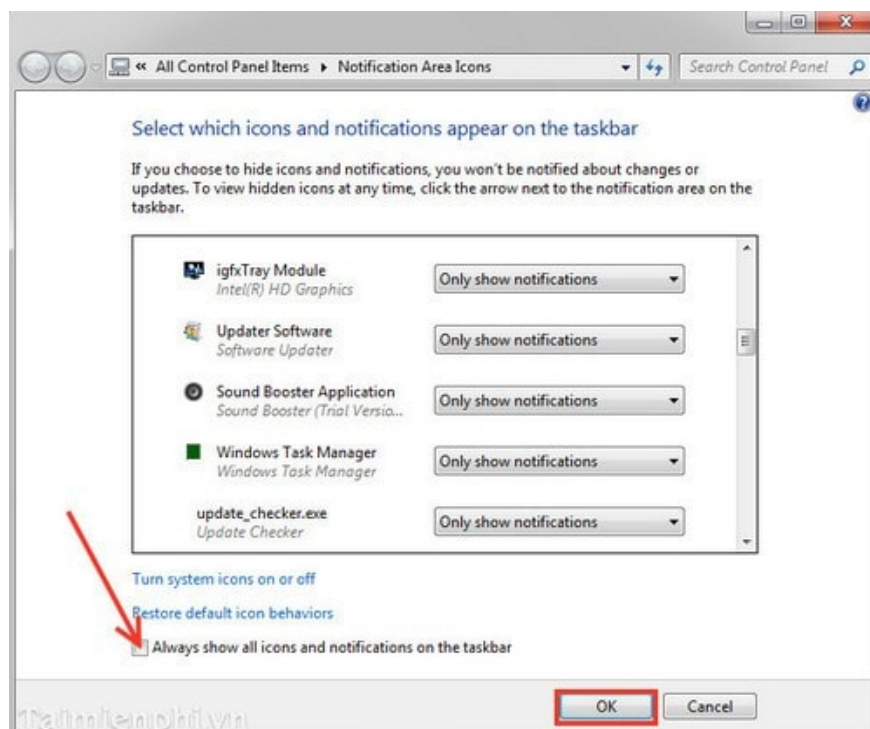

*Step 6* If you do not see the icon appear on **the Task** , click on **the Task** and select **Properties** to display the software icon under the Taskbar for use.

Go to **Task and Start Menu Properties** - - > select **Customize...**

You check **Always show all icon and notifications on the taskbar** to show all on **Task** --> click **OK**.

Sound Booster helps you easily increase the volume of your computer speakers beyond the limit, providing a clearer and more vivid sound experience when listening to music, watching movies or meeting online. Using this software not only improves sound quality but also helps control the volume level according to your needs, avoiding the situation where the sound is too low and causes discomfort.
