

How to increase the sound of MP3 files on MP3 Volume Booster

MP3 Volume Booster will increase the sound of the mp3 file to the desired level when the file is low, or decrease the volume if the sound is too loud.

There are a lot of downloadable audio files down the net, even though you've increased the volume of the music software to 100%. There are many applications or tools that help users adjust the volume of audio files such as MP3 Volume Booster for example. This Windows 10 application will help you adjust the sound, increase the volume of mp3 files to your desired level, up to 300%. Or if your audio file is a bit too loud, you can also reduce it on MP3 Volume Booster. The following article will guide you how to adjust the sound of music on MP3 Volume Booster.

How to increase the MP3 volume on MP3 Volume Booster

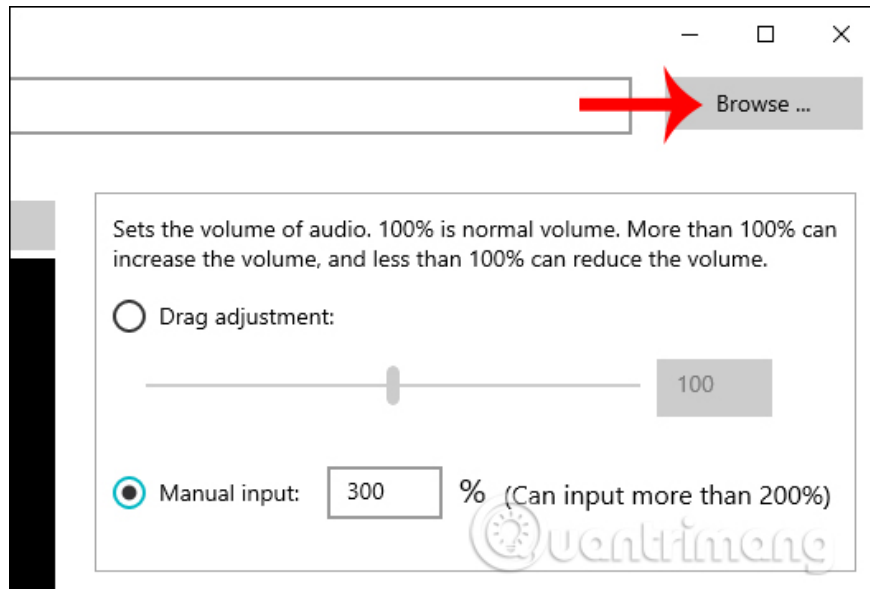

Step 1:

Users download the MP3 Volume Booster application for Windows 10 by following the link below.

1. Download the MP3 Volume Booster application

Step 2:

Then we launch the application and click **the Browse button** to **open the mp3 file** to adjust the sound level.

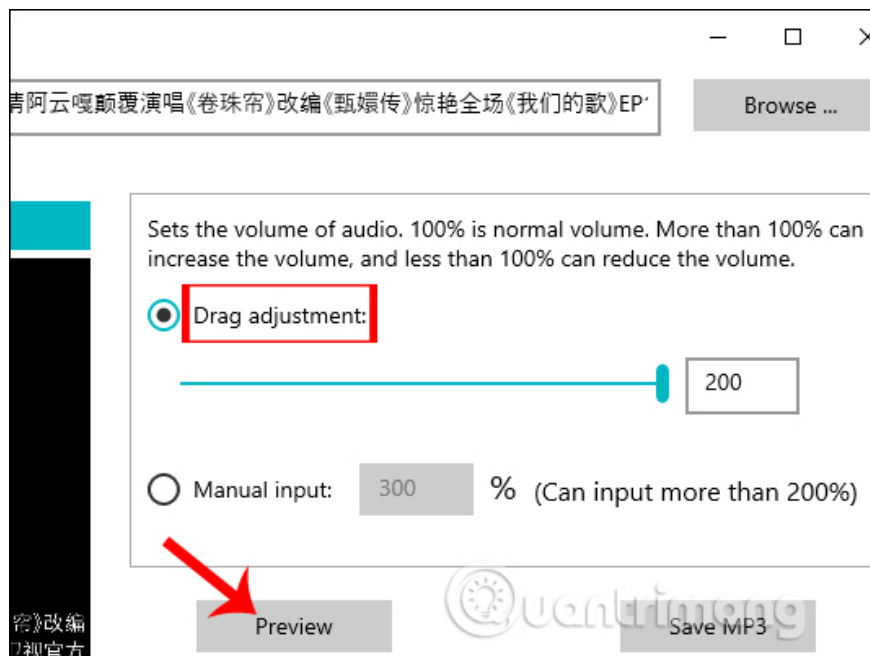

Step 3:

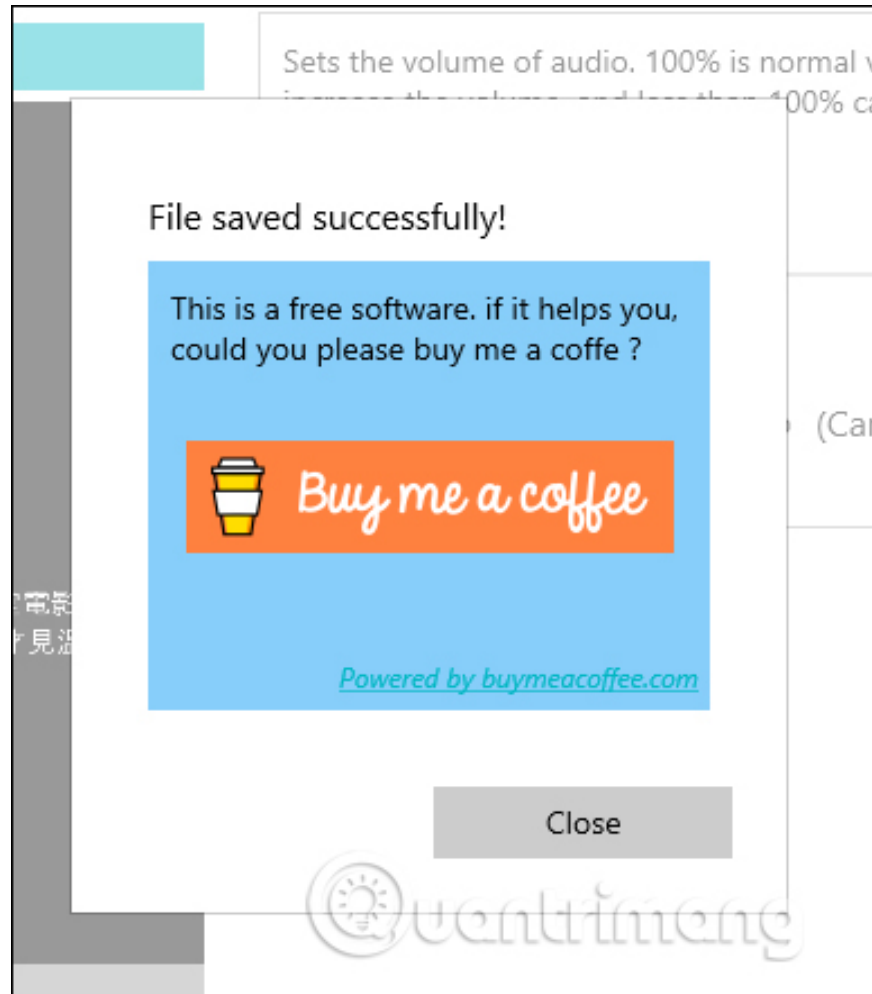

Next, the user will adjust the volume level in the lower section with 2 different options.

1. Drag Adjustment: Adjust the volume by moving the slider. The maximum allowed level of volume is 200% and the lowest is 0%.
2. Manual input: You can expand the volume level to more than 200%. You enter the value in the blank box (default is 300%).

When the adjustment is complete, **click Preview** to listen to the song with new sounds. Note the sound adjustment if the volume is too loud, the sound will be broken and the sound will be heard when playing music.

When you like, click Save MP3 to save the new song. We can save the same folder as the old song because the application automatically adds the distinctive characters compared to the old mp3 file. The sound of the old volume file has been changed to increase according to your adjustments.
