

How to install and set up 7+ Taskbar Tweaker on your computer.

To better optimize the Taskbar, users should install 7 Taskbar Tweaker to add interesting customizations to the Taskbar on Windows 7, 8, 8.1, and Windows 10. This is a completely free tool and easy to set up and install on your computer.

Detailed instructions on how to install the taskbar customization software on Windows will be shared in detail in the guide below. Note that the instructions for installing Taskbar 7+ Taskbar Tweaker can be easily applied between Windows 7, 8, 8.1, and Windows 10 users.

How to install and set up 7+ Taskbar Tweaker on your computer.

Step 1 : After downloading, right-click on the software and select **Open** to open the installation file for Taskbar 7+ Taskbar Tweaker.

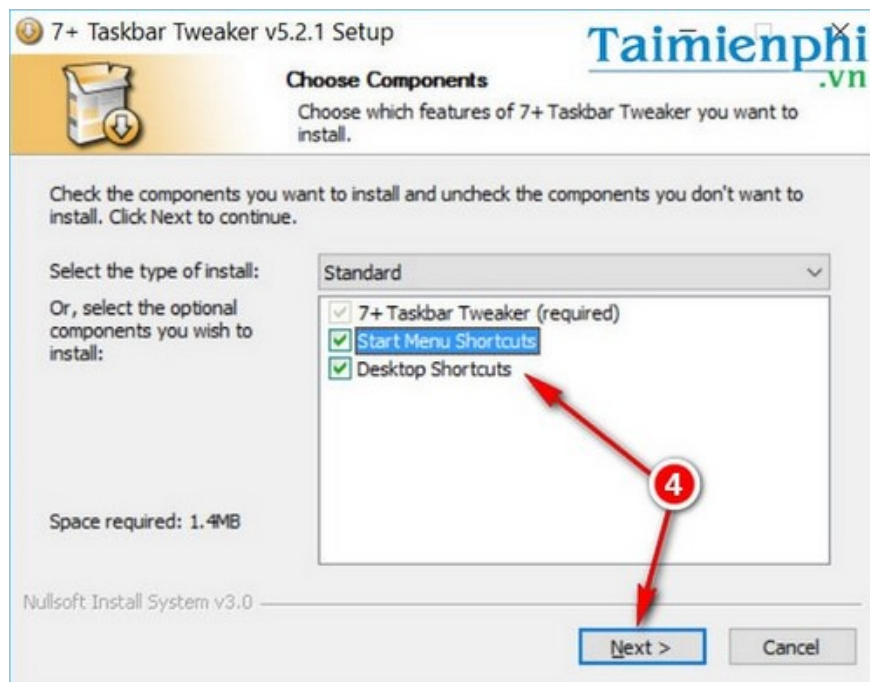

By default, the system will warn you about installing new third-party software; simply click **Run** to continue.

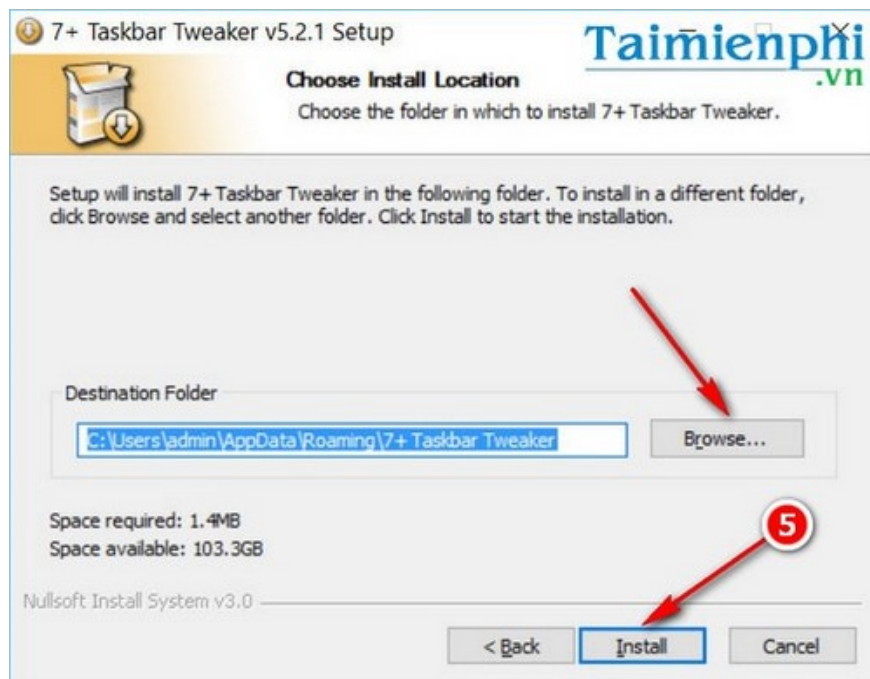

Step 2: Choose the language for the software. TipsMake recommends using English to operate the software, as 7+ Taskbar Tweaker does not yet support Vietnamese. Click **OK** to continue.

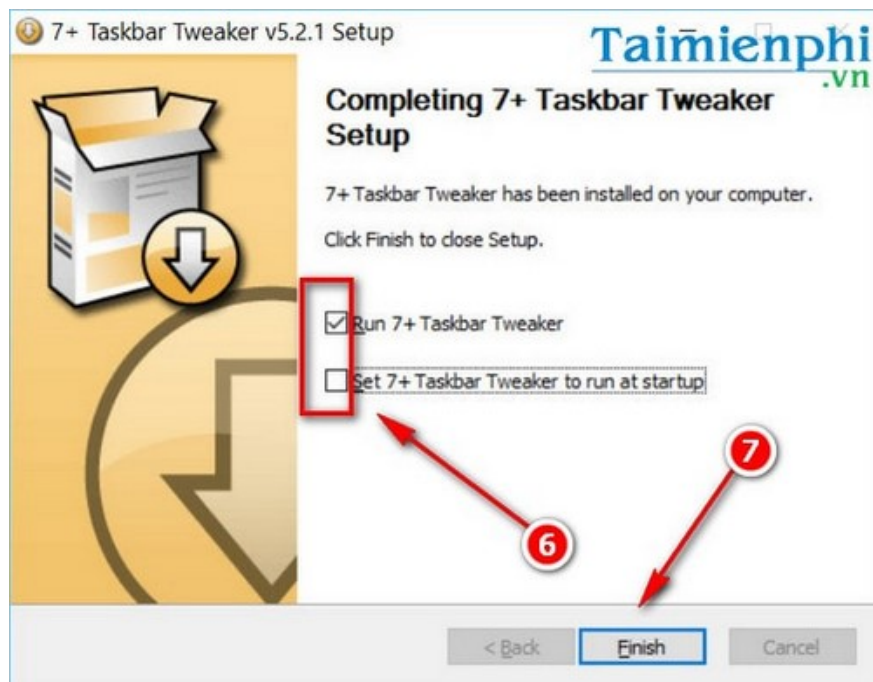

Step 3: In the section for selecting which parts of 7+ Taskbar Tweaker to install on your computer, you can find three options: the standard installation package with the software, shortcuts on the Start Menu, and shortcuts on the Desktop. Click **Next** to continue.

Step 4: Choose the installation location for 7+ Taskbar Tweaker by clicking **Browse** to locate the drive you want to install it on. Click **Install** to begin setting up 7+ Taskbar Tweaker.

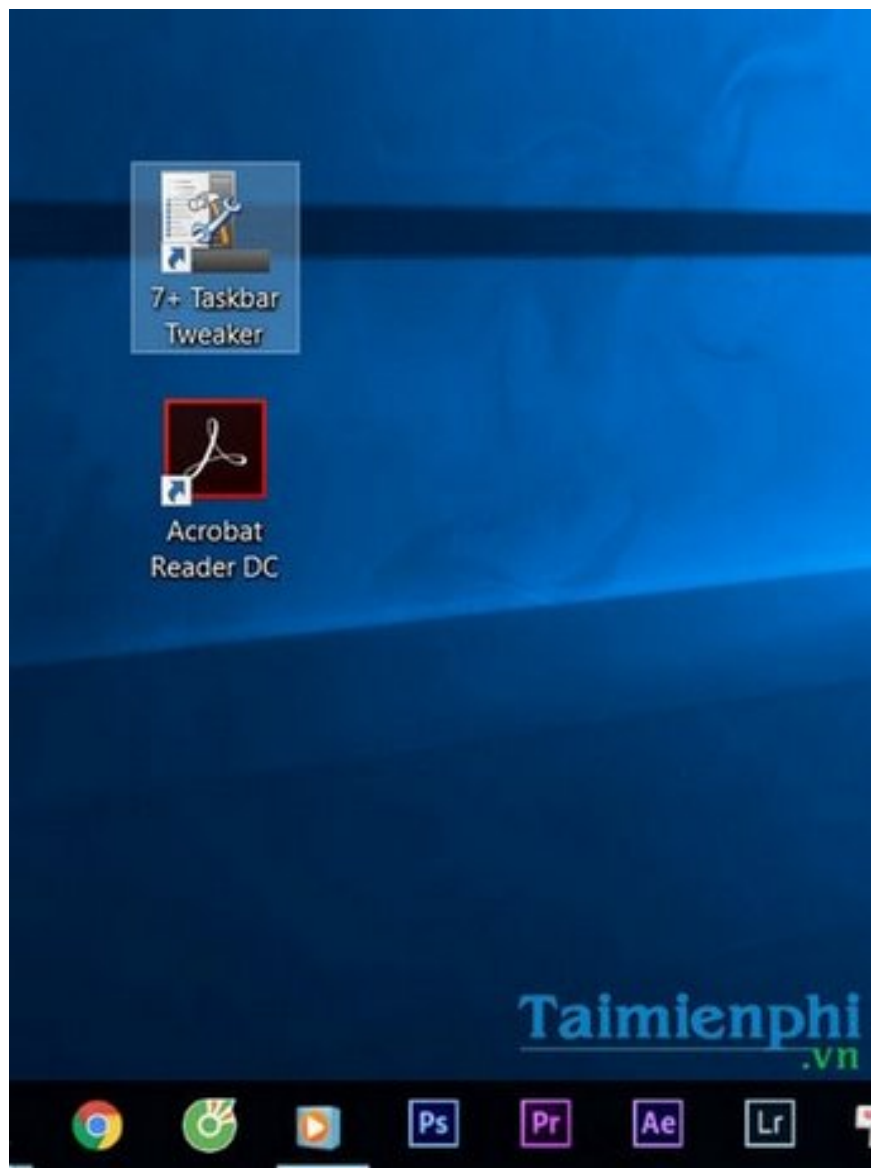

Step 5 : Once the 7+ Taskbar Tweaker installation interface is complete, you can tick the " **Run 7+ Taskbar Tweaker**" option to open it immediately, or click the second option: " **Set 7+ Taskbar Tweaker to run at startup** ," which means setting 7+ Taskbar Tweaker to start by default with Windows.

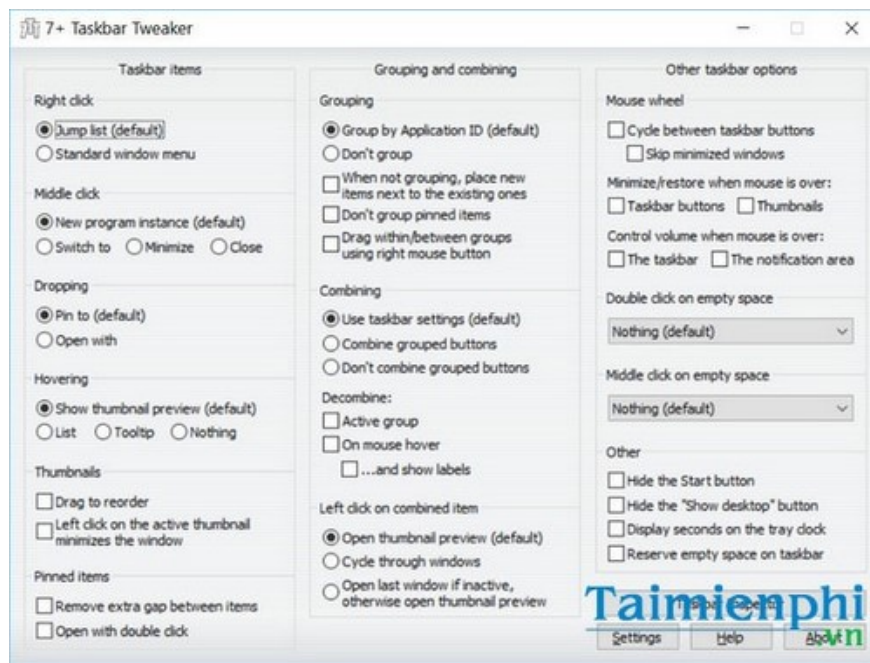

Click **Finish** to complete.

The software icon on the computer screen.

The main interface of the software.

As one of the leading software tools for customizing the Windows taskbar, 7+ Taskbar Tweaker not only supports users in customizing the Windows taskbar with functions such as application grouping, combining, drag-and-drop, and mouse combinations, but it also offers the ability to disable unnecessary icons on the taskbar.

Furthermore, Windows itself supports users in hiding or showing the Taskbar on the Windows system. Being able to hide or show the Taskbar allows users to change the operating system's interface, making the computer's display more interesting.
