2. Instructions on using Format Factory .

Instructions for installing Format Factory on your computer.

System requirements:

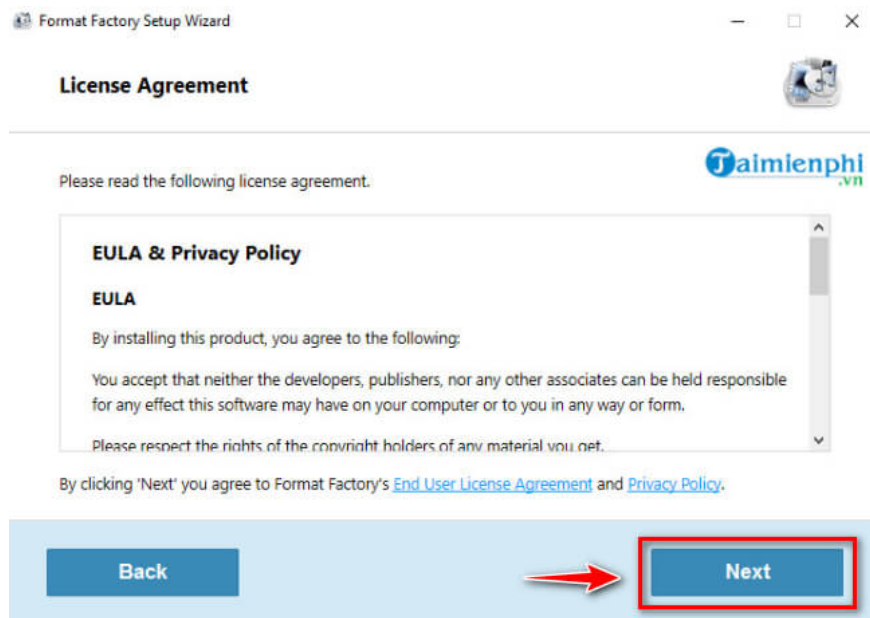

- Operating system: Windows 2000, XP, Vista, Windows 7/8/10
- Minimum processor: Pentium III 700MHz
- RAM: 256 MB
- Hard disk space: 50 MB

Step 1: Download the latest version of Format Factory here to update to the new features.

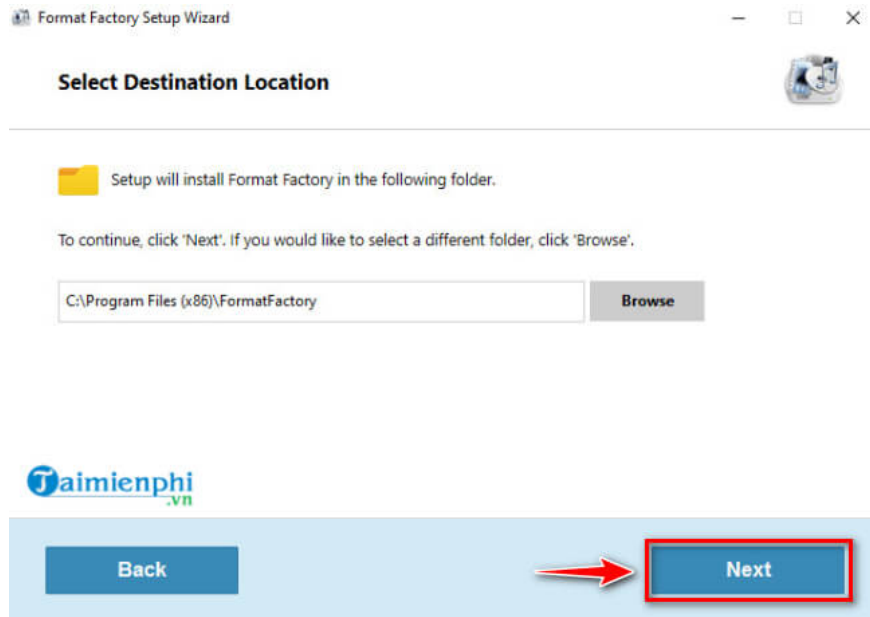

Step 2 : Open the file you just downloaded. A window will appear; click the **Next** button to begin the installation process.

Step 3: The window will then move to the software's terms of use section. Continue by clicking **Next** .

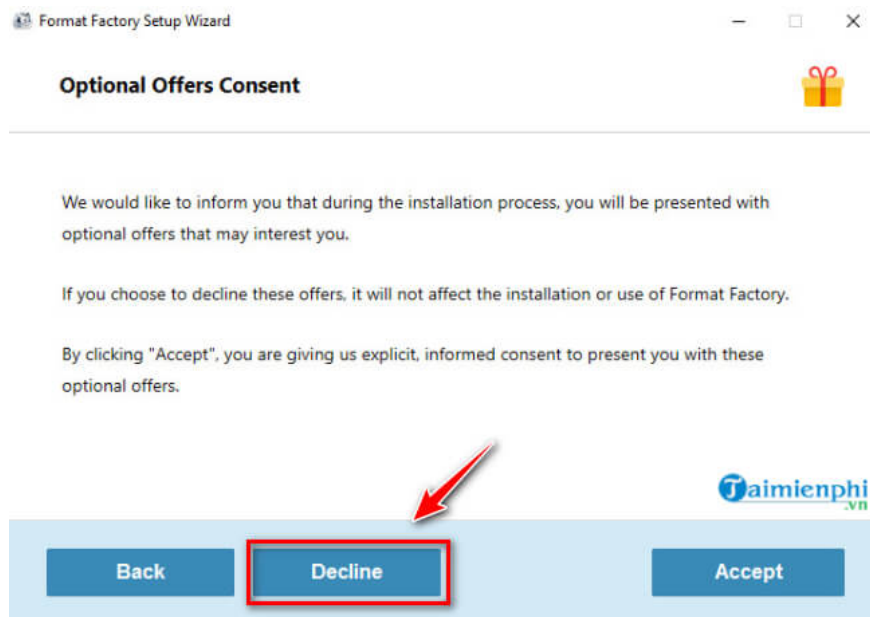

Step 4: Immediately after agreeing to the manufacturer's terms, the system will automatically take you to a new window. This window will ask you to choose where to save the software. Click **Next** to continue the installation.
Note : By default, Format Factory will install on the hard drive where Windows is installed. You can choose to install it on a different drive by clicking **Browse** to select the installation folder.

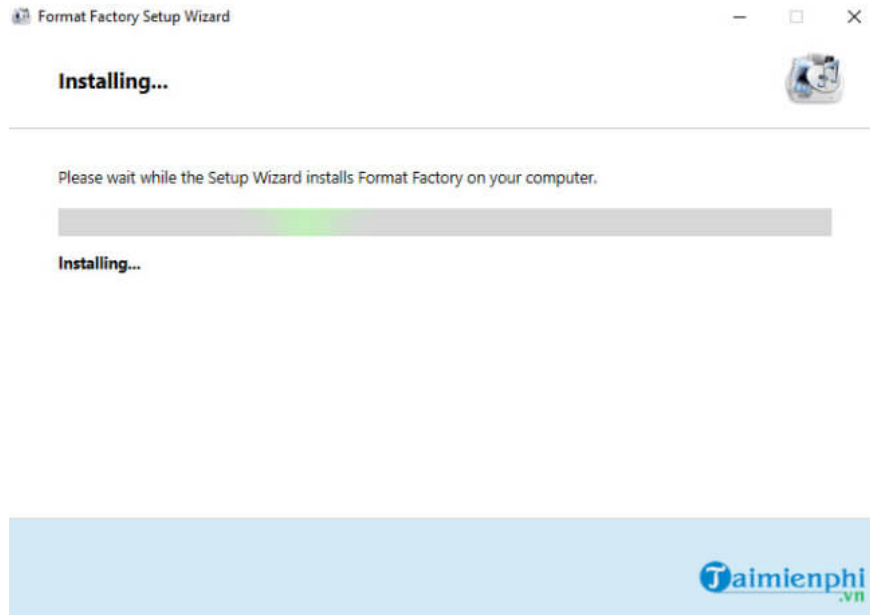

Step 5: Immediately afterwards, a window will appear prompting you to install some other programs. Click **Decline** to decline.

Note: If you click **Accept**, **Format Factory** will install **McAfee** and **Avast** antivirus software on your computer.

Step 6: After declining the invitation to install the programs above, the Format Factory installation file will automatically extract and install the software on your computer in just a few moments.

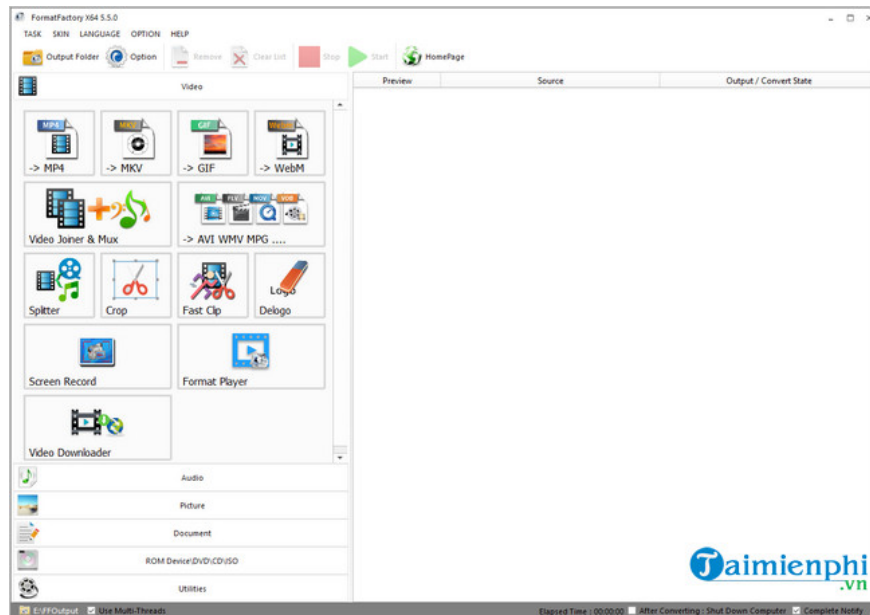

Step 7: Wait a moment for the system to install the software. After the installation is complete, a Finish button will appear on the screen. Click on **Finish** to complete the installation process.

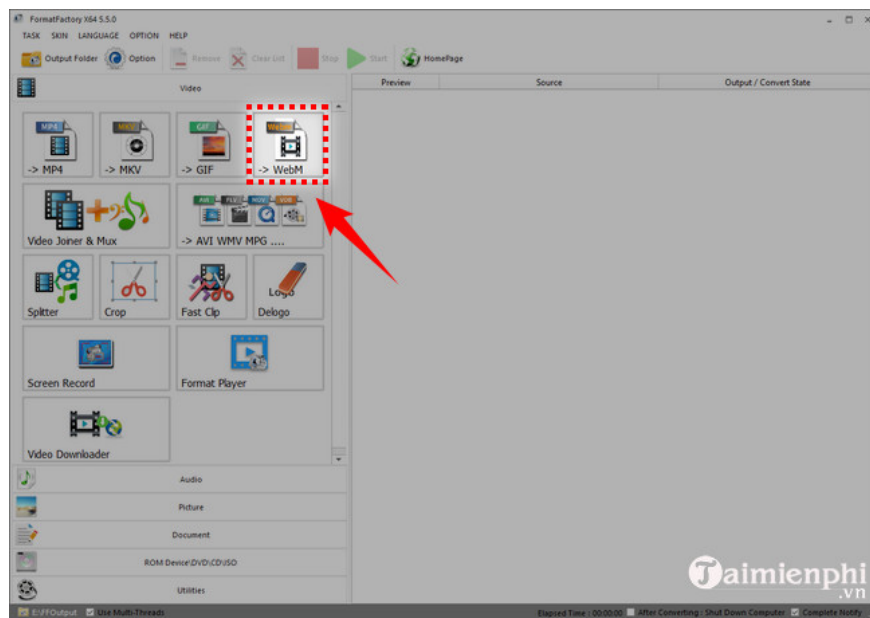

Instructions on using Format Factory to convert videos.

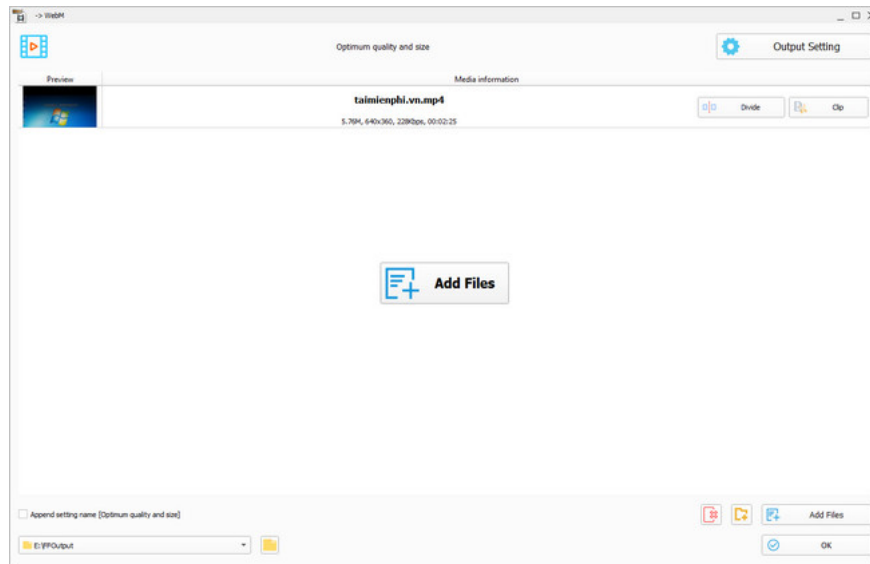

Step 1 : On the Format Factory interface, click on the **Video** section and select the video format you want to convert to (including: **MP4, AVI, 3GP, WMV, MOV, . .**) .

Step 2 : Here, Taimienphi guides you on how to change the video file extension to **AVI** by selecting **Video --> WebM** . A window will then appear as shown below.

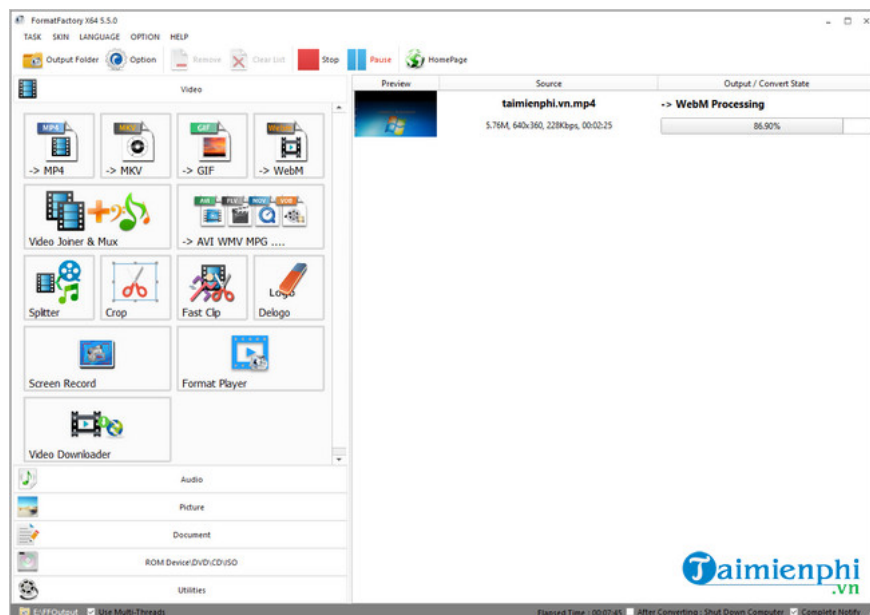

Step 3 : Click on **Add File** and select the file you want to convert.

After making your selections, you can choose video options using the **Output Setting** button . Several configurations are already available for quick selection. Press **OK**.

Step 4 : After making your selections, click **Start** to begin the video to AVI conversion process and wait until the program completes the conversion.

Besides this method, there are many other ways to install Format Factory, and some even use Format Factory as a software program without installation. However, these methods often encounter problems, primarily due to incompatibility with your computer's configuration and other issues. With this installation method, you don't have to worry about these problems; Format Factory runs smoothly on your computer without any errors.

You can also use other video and audio conversion software such as **Total Video Converter** , **Any Video Converter** , or **Xilisoft Video Converter** .
