

How to install Korean keyboard for Windows

Install Korean keyboard for Windows 7, 8, 8.1, Windows 10, which will help you type Korean on your computer. To set the Korean language for you the key is quite simple, please refer to how to do it in this tutorial.

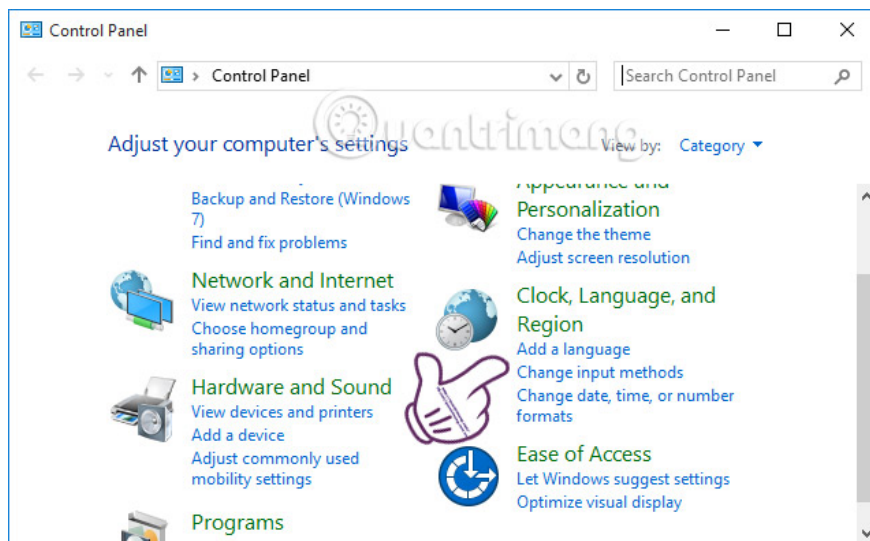

Currently, in addition to English, Korean and Japanese are also one of the most popular developed languages ?? today. Therefore, the need to learn a foreign language on a computer is essential. Previously, Network Administrator has instructed how to install Japanese keyboard for Windows, through Google Japanes Input tool.

In the following article, we will continue to guide you how to install the virtual Korean keyboard for Windows. Virtual Korean keyboard is located in the Microsoft IME data entry toolkit, available in Windows operating system versions. The following article we will do on Windows 10. With Windows 8 and Windows 7 operating systems we do the same.

Install Korean keyboard for Windows 10

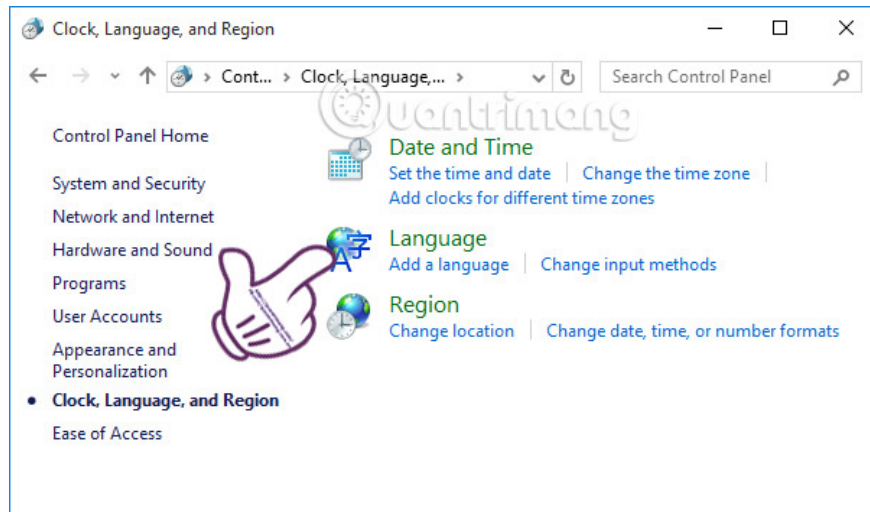

Step 1:

First of all, we enter **Control Panel** on the computer and click on **Clock, Language, and Region** .

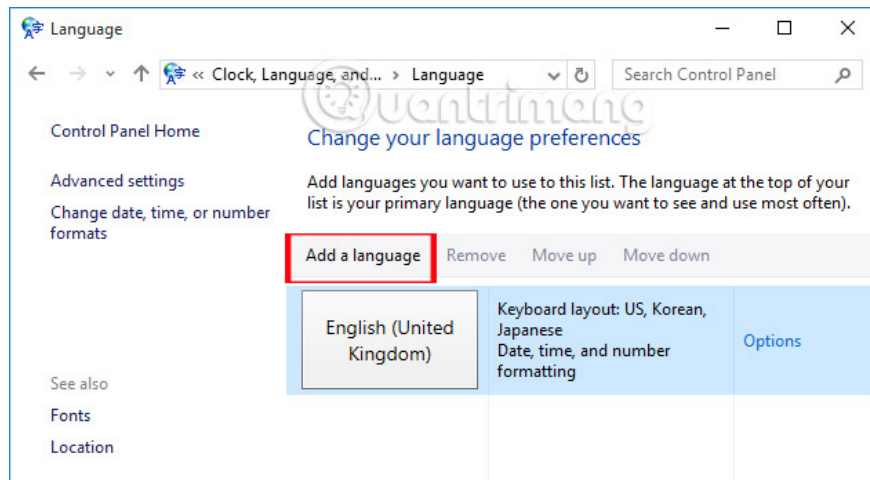

Step 2:

Continuing, we click on **Langugae** .

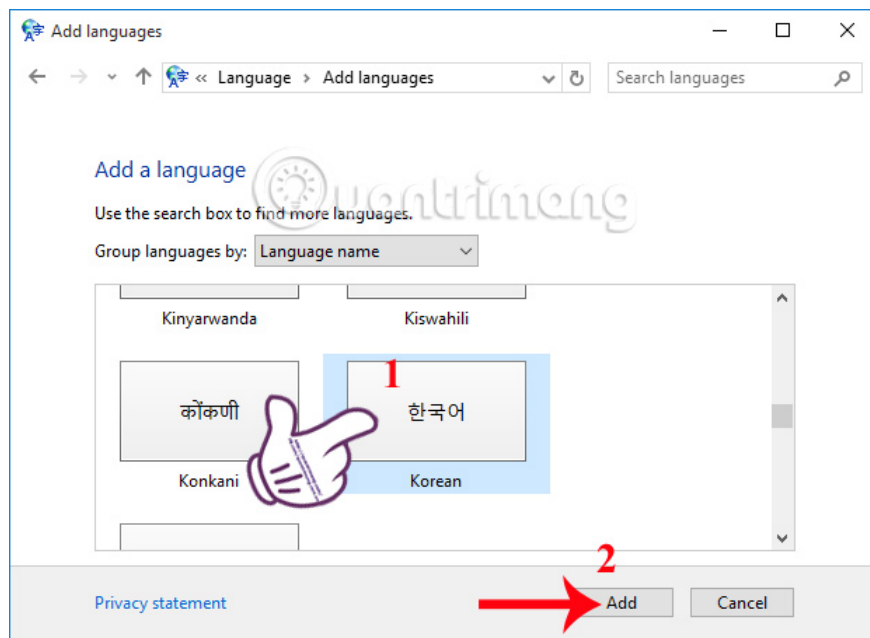

Next to the interface, we click **Add a language** to add a language keyboard to the computer.

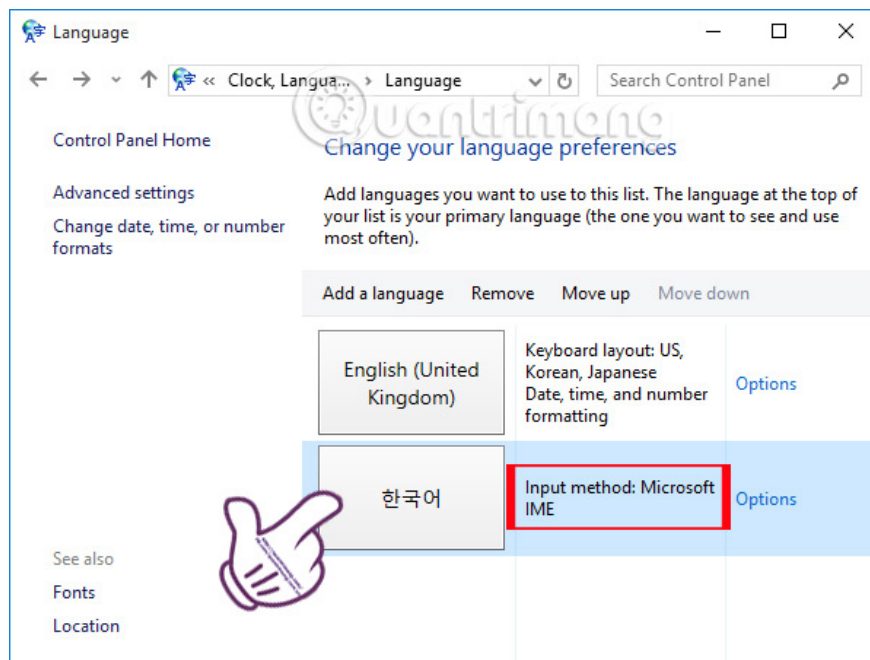

Step 3:

In the Add a language interface, we will find **the Korean language** and click **Add** .

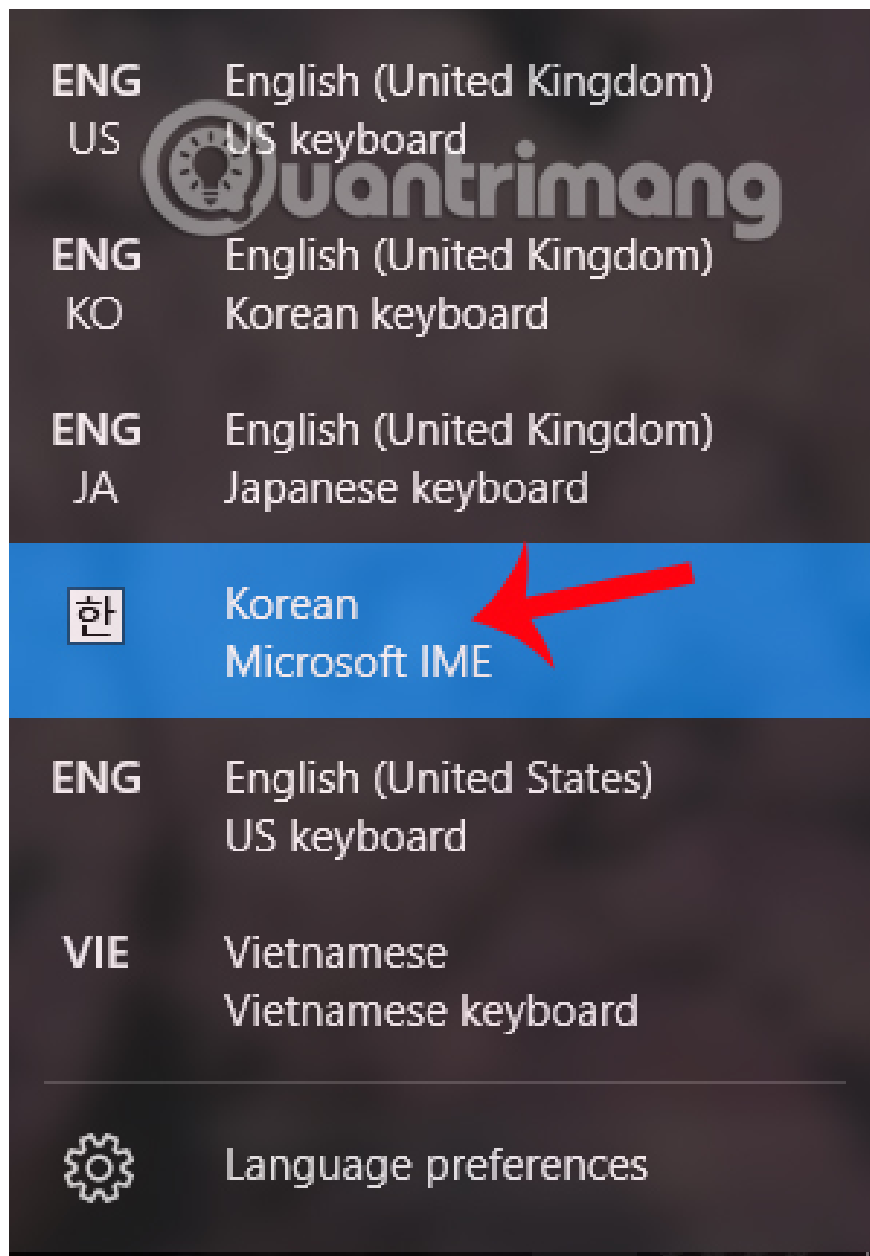

Soon, users will see the Korean keyboard language of Microsoft IME input tools appear in the keyboard language list for Windows.

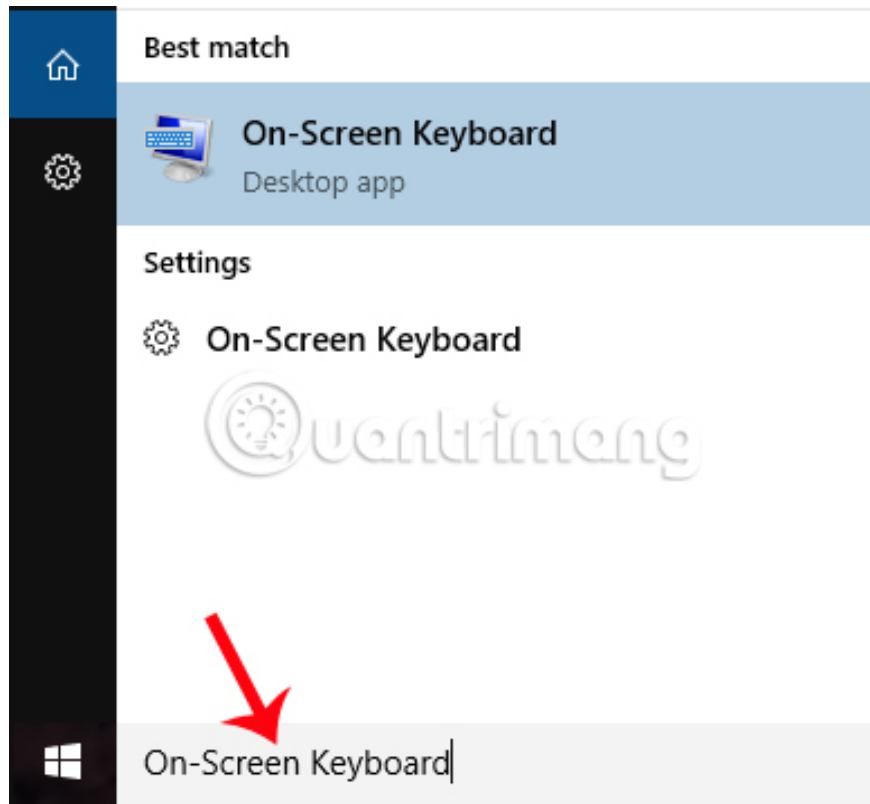

Step 4:

Now go back to the interface on the screen and click on **the Language bar icon** under the Taskbar to change the keyboard language to **Korean Microsoft IME** .

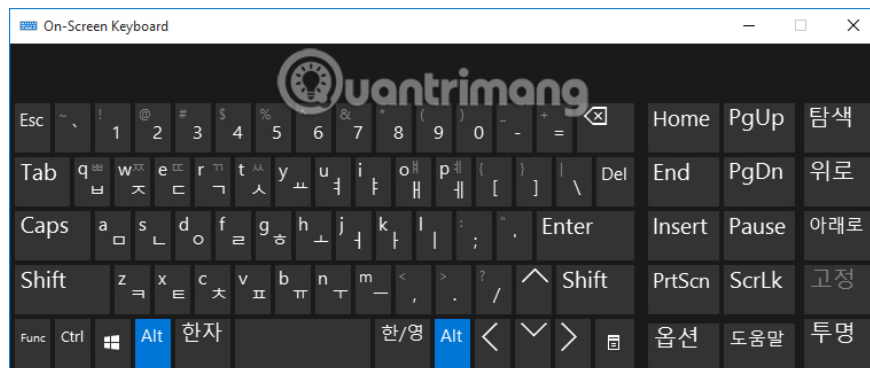

Step 5:

To become familiar with the Korean keyboard layout on Windows, let's take a look at the virtual keyboard **On-Screen Keyboard** . Enter the On-Screen Keyboard keyword in the search bar to open it.

Users can rely on this to easily type Korean keyboard on computer.

Step 6:

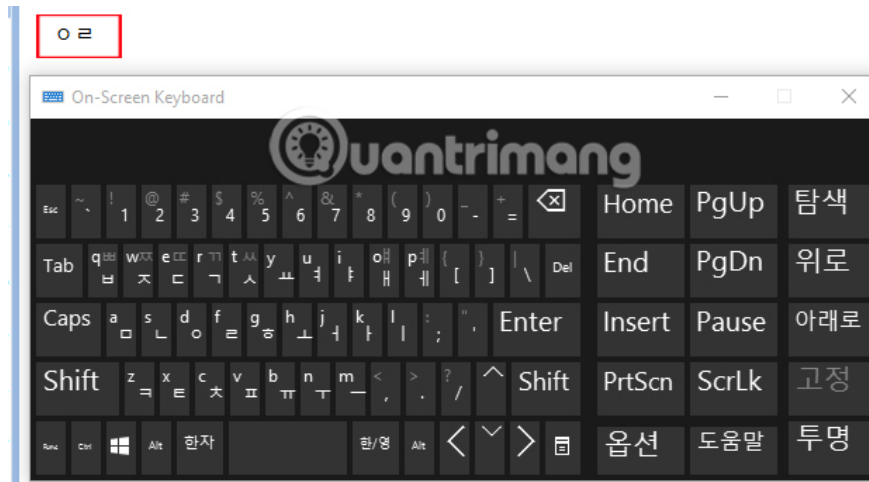

Now open the editing tool on your computer, then look down at the Taskbar to switch to **Korean typing** mode. Click on EN> select Korean, continue to right-click on the letter A to select **Hanja Convert** .

After selecting the letter A, it will become an icon as shown below.

Please enter the Korean content that we want to type. It is best to turn on parallel with the virtual keyboard On-Screen Keyboard to gradually become familiar with typing Korean keyboard on the computer.

In case the user wants to switch back to **the English language** , we just need to tick the Korean icon in the Taskbar to switch to **the A letter icon** .

Above is how to set up Korean keyboard for Windows 10 computer. Installing Korean virtual keyboard is also very simple and you can switch between keyboard languages ??on the computer, through the expression. The language icon in the Taskbar is fine.
