For those of you living in Korea or working for a Korean company, you will probably need to install Korean keyboards to use for your work. On Windows, the Korean keyboard has been provided by Microsoft but to use it, you need to download and activate it to be able to use it. The following article TipsMake.com will guide you how to install Korean keyboard on windows 10 and windows 7, please follow along.

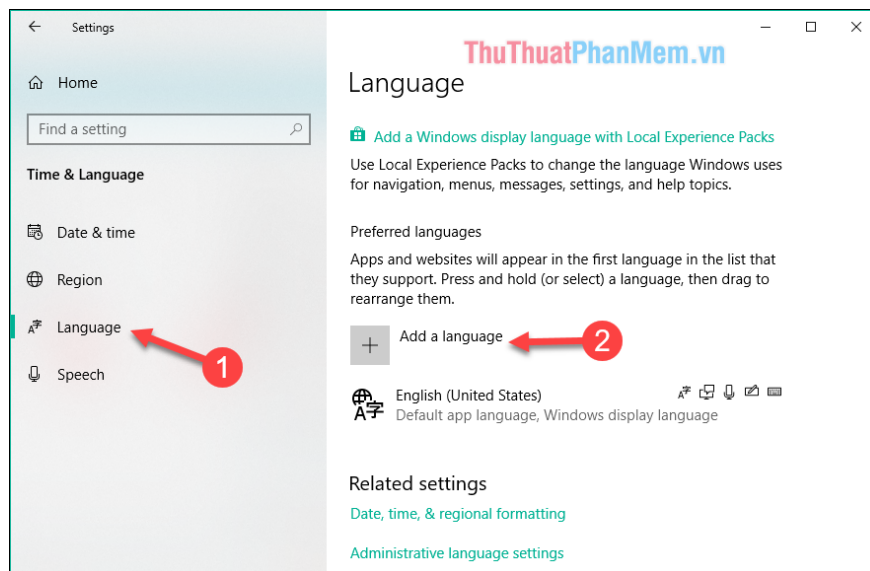

## 1. Installing Korean keyboard on windows 1

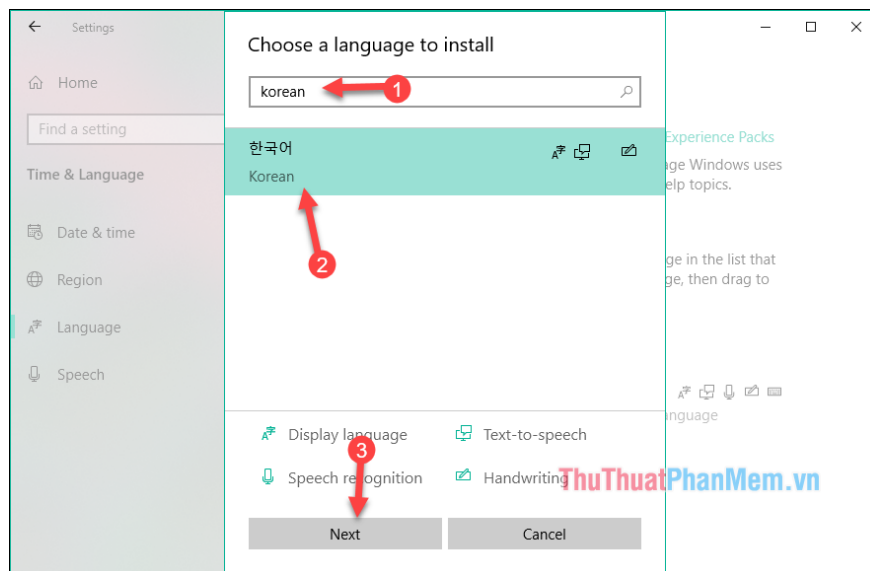

**Step 1 :** Open Settings on Windows 10 and select **Time & Language**

**Step 2 :** In the new window, select **Language** and then click **Add a language** to the right of the window.

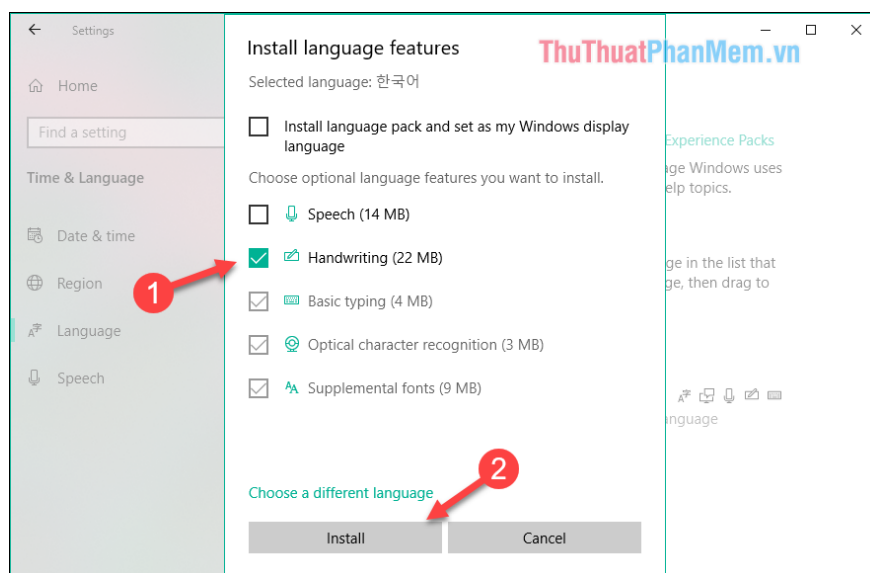

**Step 3:** In this window, enter Korean in the search box to find the Korean keyboard, then select the results and click **Next** .

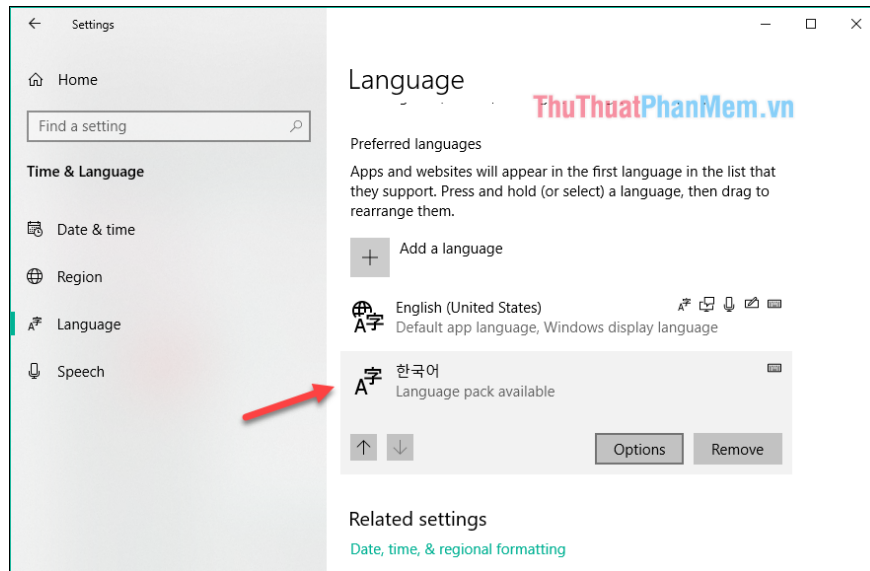

**Step 4 :** Here if you only want to install Korean percussion, then tick Handwriting check is enough, if you want to use Korean voice, then select Speech.

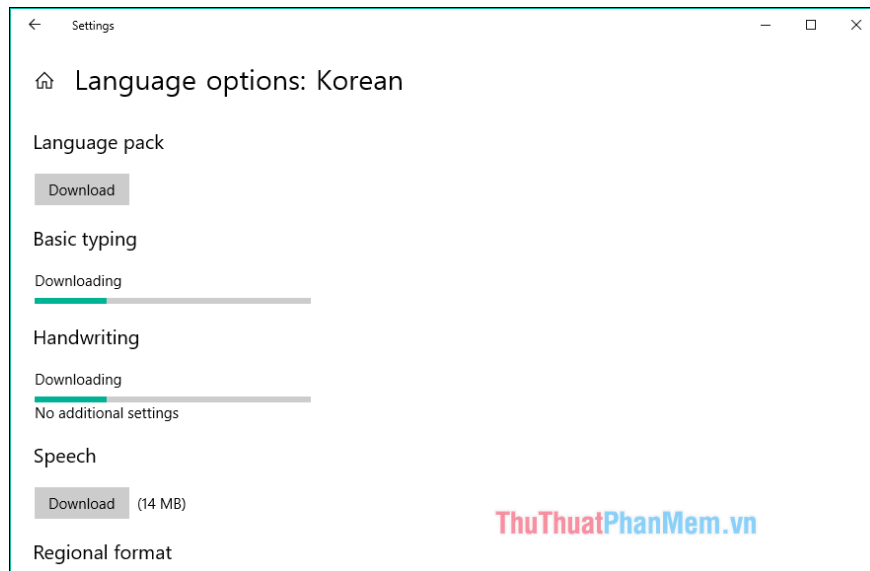

Also if you check the first line **Install language pack and set as my Windows display language** , the entire interface of windows will also change to Korean. If you still want to interface English, you should uncheck, finally click **Install** .

**Step 5 :** After clicking Install, you return to the previous window to see the Korean language has been added to the list, but you need to wait a while for the language pack to be fully downloaded.

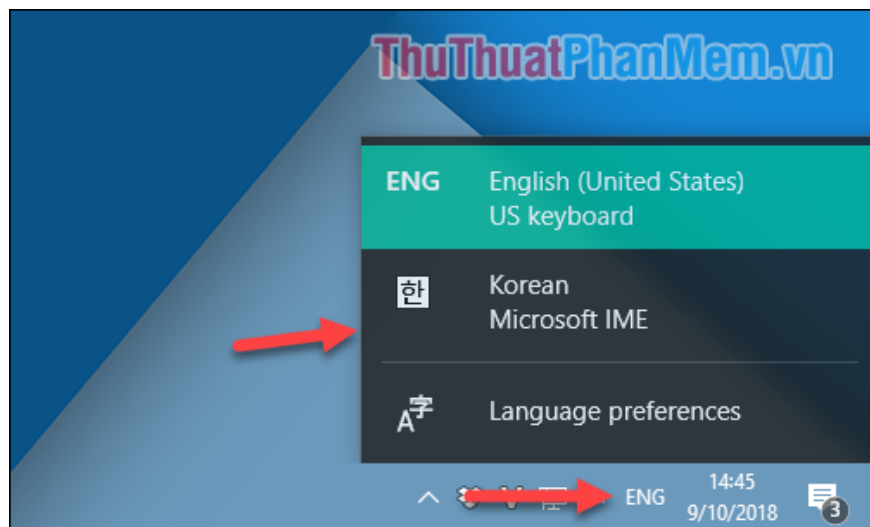

You can click **Options** to see where the download progress is.

**Step 6:** After the download is complete, look down on the Taskbar and click on the **ENG** icon , then select the Korean keyboard.

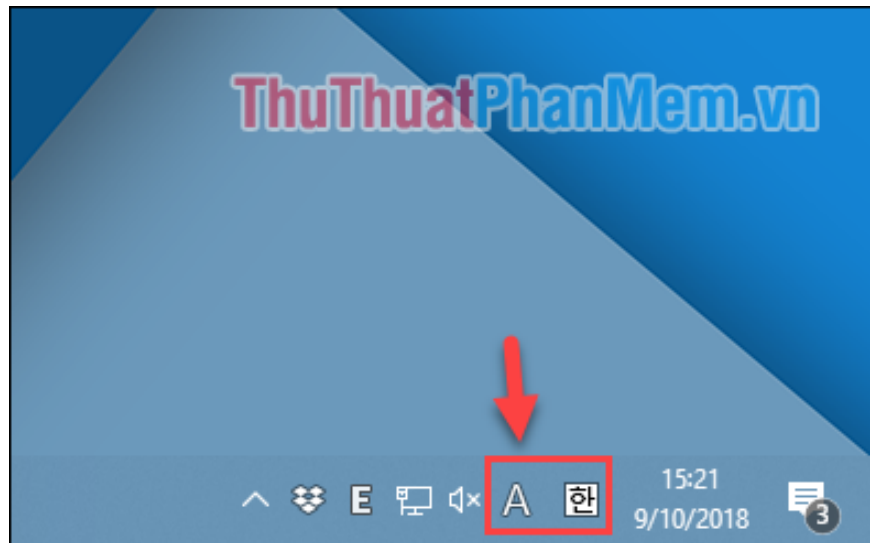

**Note :** to type without error, you should turn off Unikey or Vietnamese typing software.

When there is an icon like the image below, you can type in Korean already

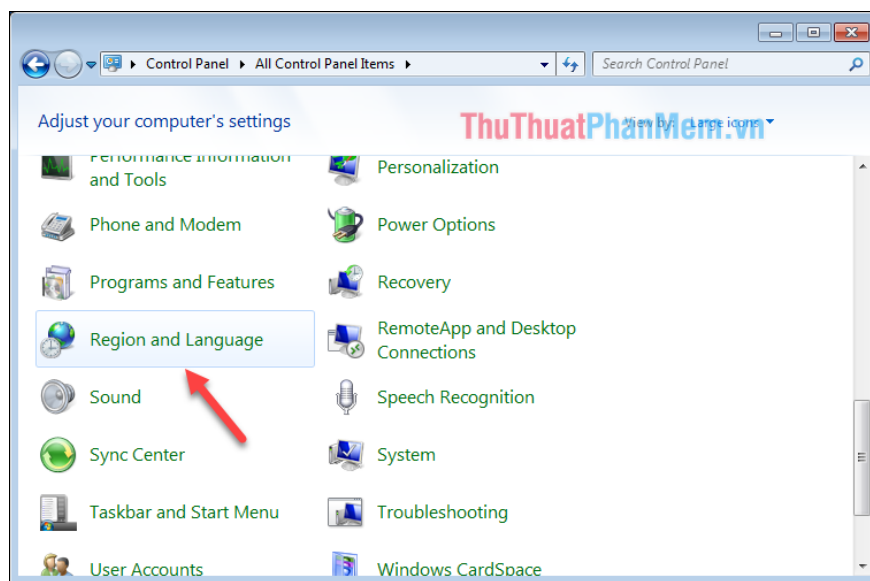

To return to Vietnamese percussion, press the letter ? then it will change to letter A.

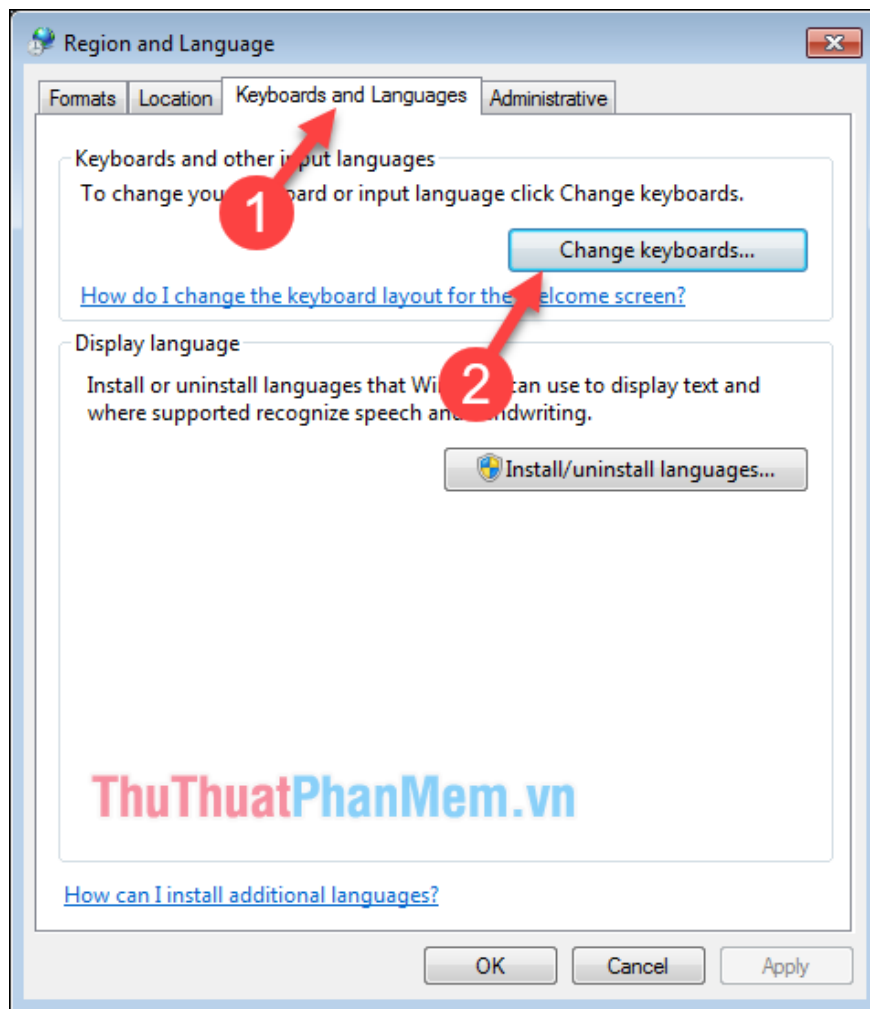

## 2. How to install Korean keyboard on Windows 7

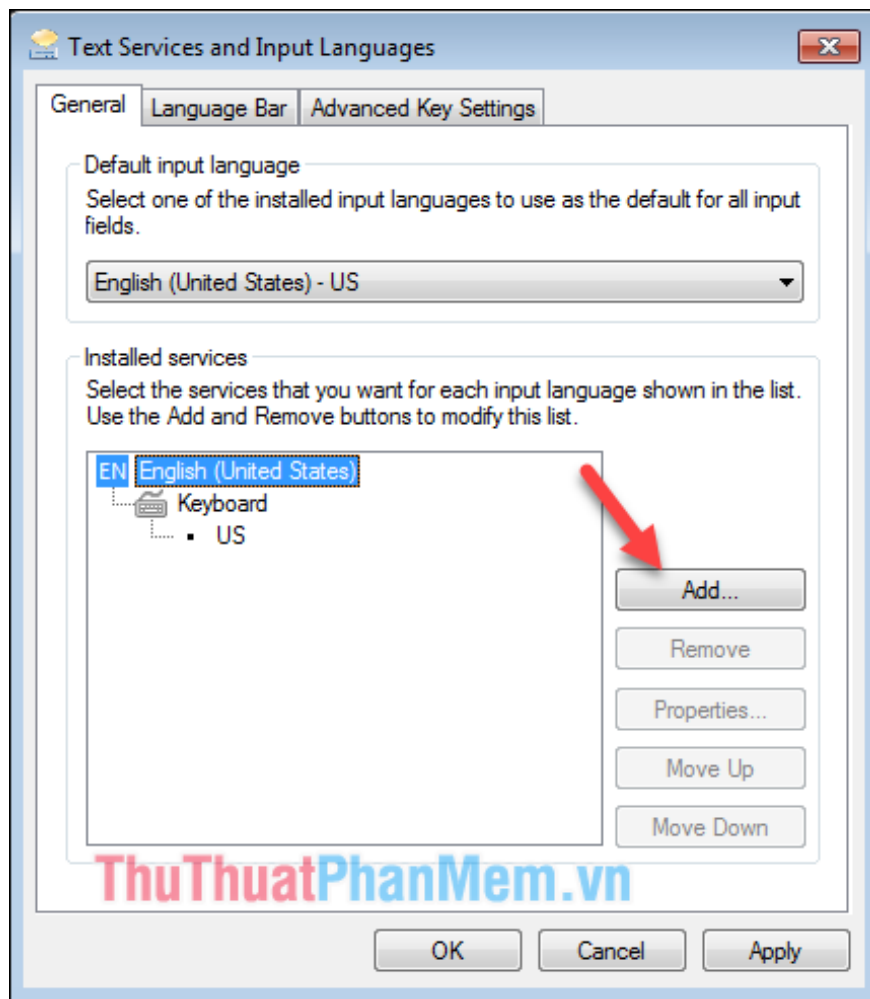

**Step 1 :** Open the Control Panel and select **Region and Language**

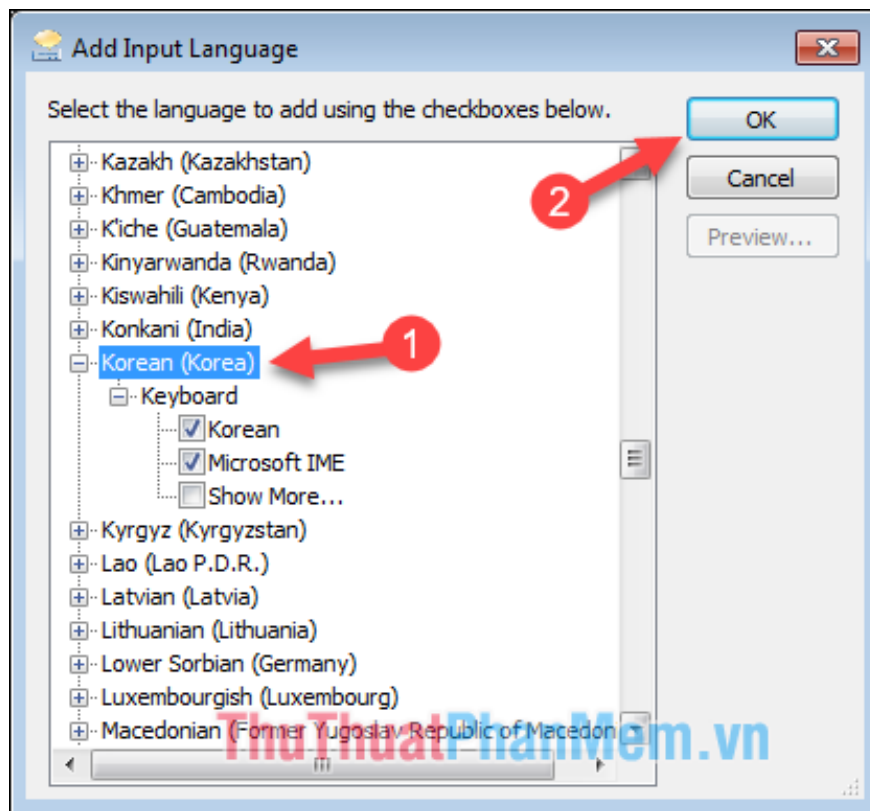

**Step 2 :** In the new window, select the **Keyboard and Languages** tab, then select **Change keyboards** .

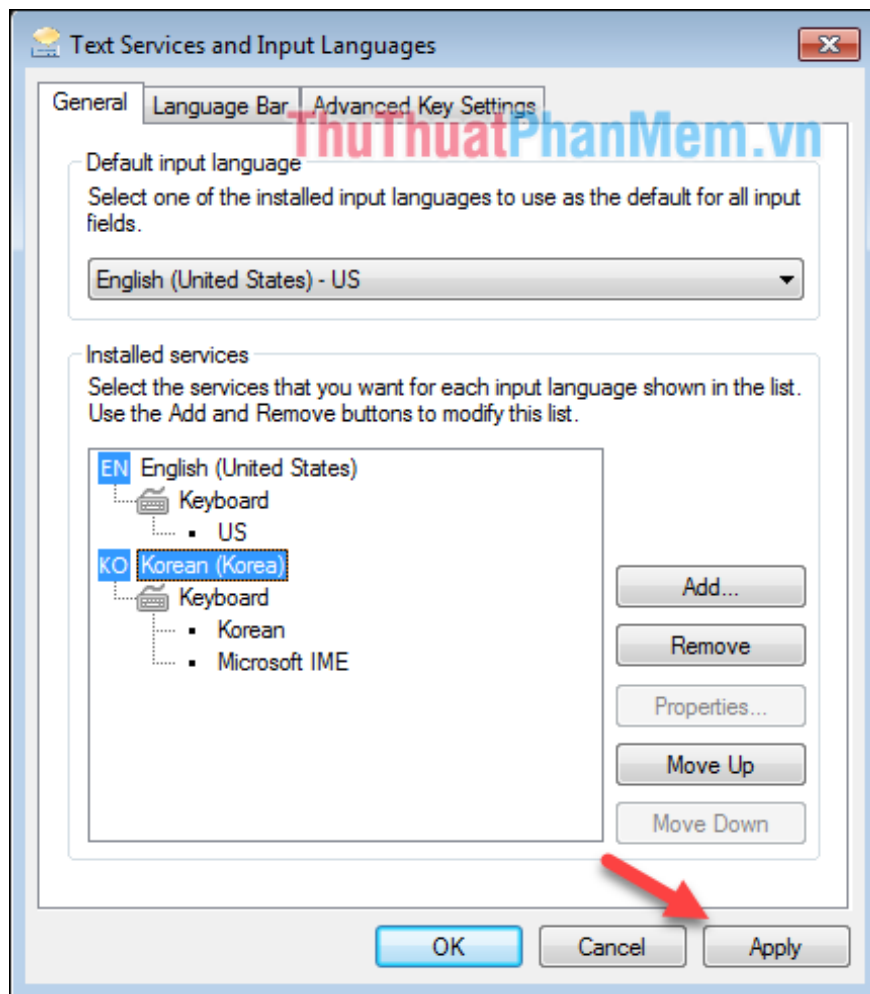

**Step 3** : In this window, click the **Add** button to add the keyboard

**Step 4** : Navigate to the Korean keyboard, then select the image below and click OK.

**Step 5** : Back to the previous window you will see the Korean keyboard has been added below the English keyboard. Click Apply to save changes and click OK to exit.

**Step 6:** Look down the Taskbar, click the EN icon and select **Korean** keyboard

When there is an icon like the image below, you can type in Korean already, but turn off Unikey to avoid cores when typing.

To return to Vietnamese percussion, press the letter ? then it will change to letter A is:
