

How to install Light mode and Dark mode for apps on iPhone

Tweaking the Translucency Infinity on iPhone will change the default interface of the application installed on the device.

In order to help reduce the harmful effects of screen light on the user's eyes, many applications have a dark background, but the number is relatively small. If the user wants to change the default interface on the iPhone, change to a dark background, then use the tweak Translucency Infinity.

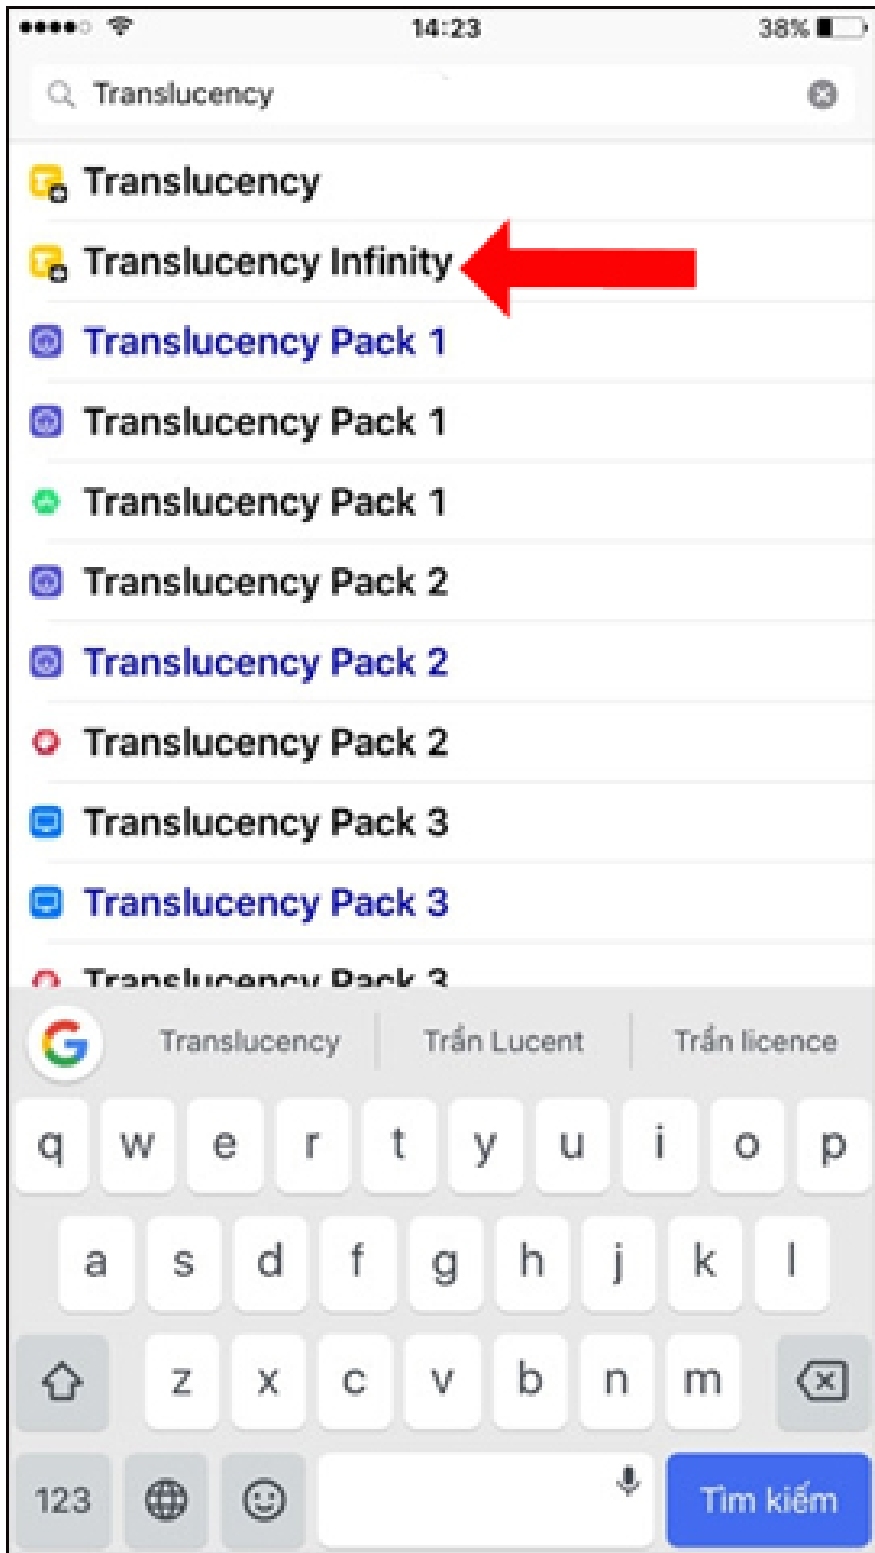

This tweak will install on devices that have iOS 10 or later jailbroken. Translucency Infinity will customize between 2 modes Light mode and Dark mode in any application on iPhone, including default applications in the system such as Settings, App Store, Contacts, Calendar, Safari, . The following article will show you how to install Tweaking Translucency Infinity on iPhone.

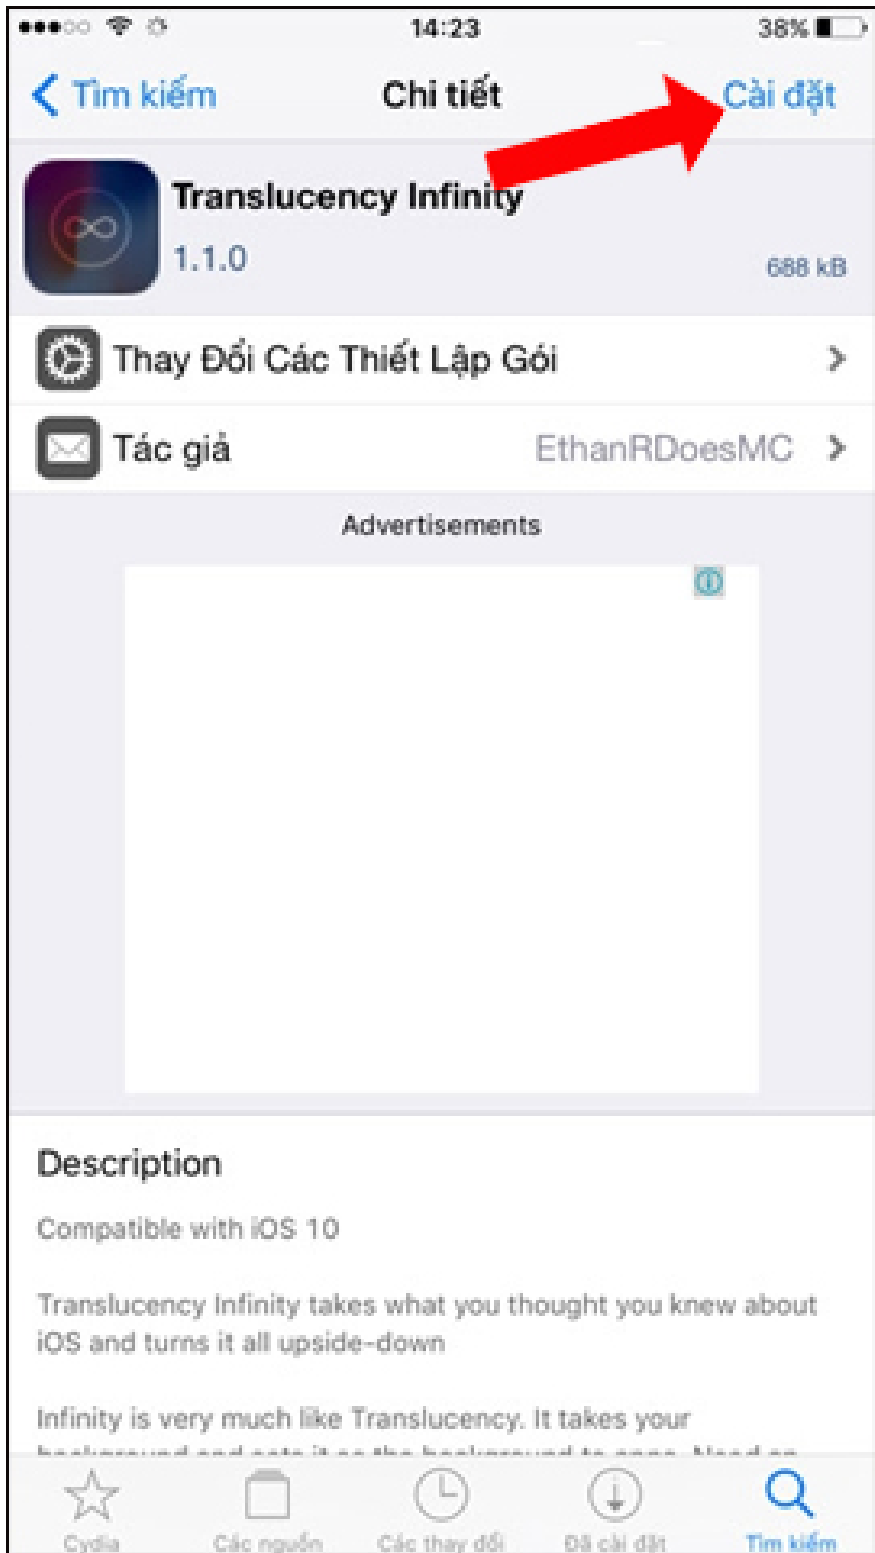

1. How to activate Dark Mode on iPhone
2. How to turn on the dark background interface on iPhone applications
3. How to adjust the iPhone system background color

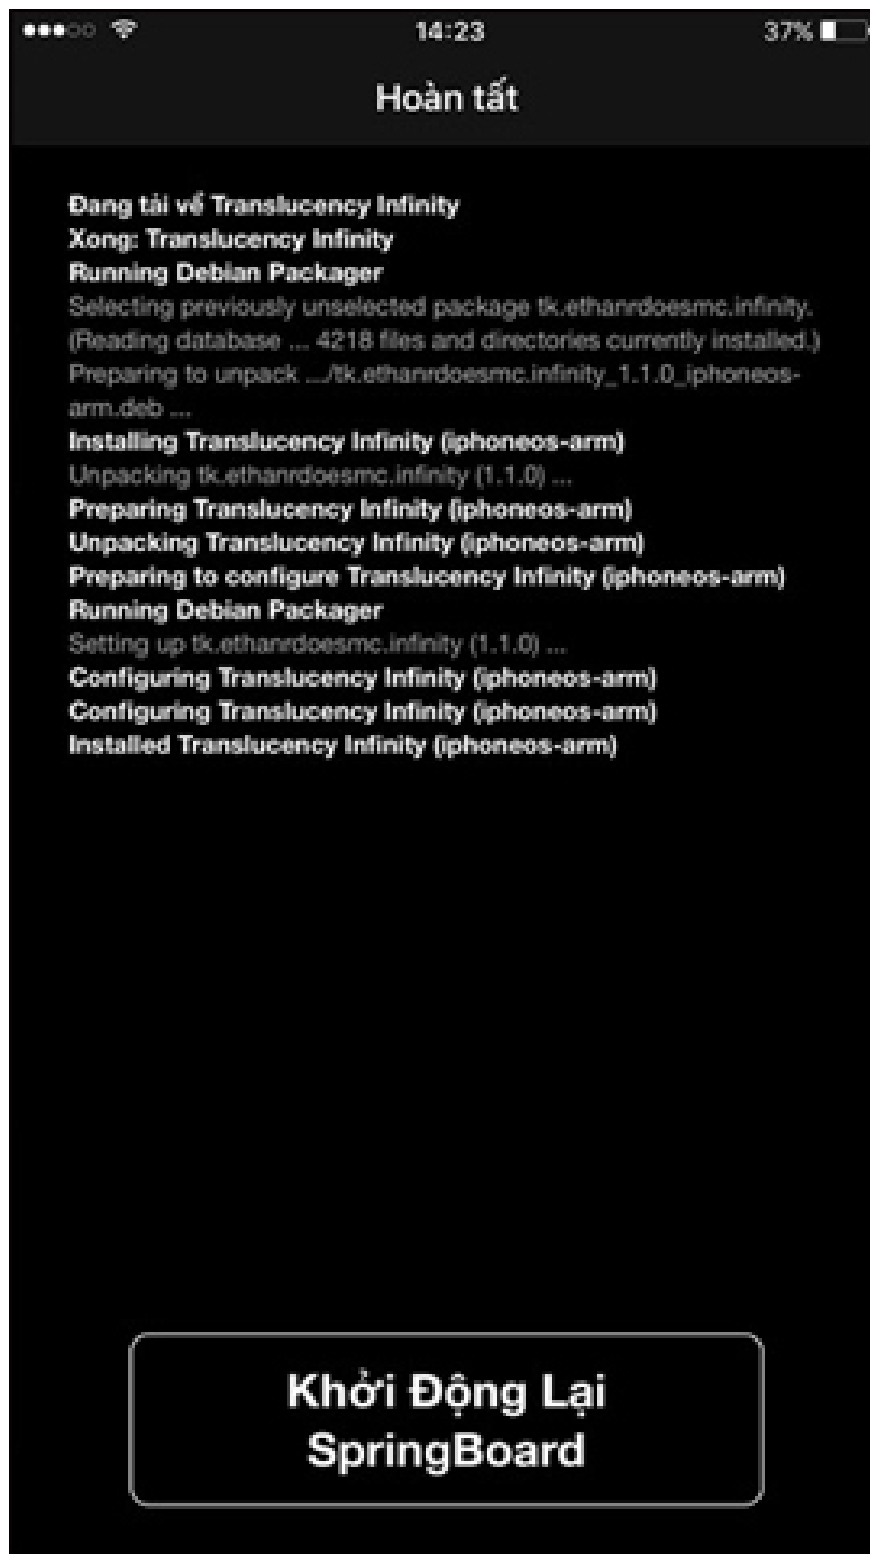

Instructions for adjusting application interface on iPhone

Step 1 :

The current tweak is installed for free on Cydia. Go to the search field and then press the keyword Translucency Infinity and download the device. Restart Springboard to use tweaking.

Step 2:

Continue to access the **Settings** and then click on **the Customize Translucency Infinity** . In the tweak interface, click on the **General** section.

 Gboard >

In General section, users will see that there are 2 modes: Light mode and Dark mode. In each interface mode we will see a list of applications that are allowed to change the background color accordingly. You just need to push the horizontal bar to the right to activate that interface mode for the application.
