Step 2. Enter the following command to get the latest update to the Raspberry Pi package list:

```
sudo apt-get update
```

Step 3. Enter the following command to install OpenVPN on your device:

```
sudo apt-get install openvpn
```

Step 4. Once OpenVPN is installed, you need to navigate to the OpenVPN folder. You can do this by typing:

```
cd /etc/openvpn/
```

Step 5. After that, you will need to download the NordVPN .ovpn configuration files. You can do this by typing:

```
sudo wget https://nordvpn.com/api/files/zip
```

Step 6. Once the file has been downloaded, you will need to extract the zip file. You can do this by typing:

```
sudo unzip zip
```

Step 7. Once the file is extracted, you need to connect to the NordVPN service. To do this, you need to enter the following command:

```
sudo openvpn file_name
```

For example:

```
sudo openvpn de75.nordvpn.com.udp1194.ovpn
```

Step 8. Once connected, OpenVPN will ask for your NordVPN account details. If you haven't done so yet, you will now need to register for a NordVPN account on its website:

```
https://nordvpn.com/special/
```

Once you have done this, enter your NordVPN username and password.

Step 9. Once done, you will be connected to the NordVPN server, after which all your online activities will be secure and private.

Step 10. If you want to disconnect from the NordVPN server, just press **Ctrl + C** on your keyboard. But if you want to disconnect while using a terminal window, you'll need to enter the command:

```
sudo killall openvpn
```

For those familiar with the Raspberry Pi's operation, the process should be quite simple. Even first-time users don't have too many problems.

Good luck !
