To enhance the Minecraft experience, you can install custom shaders. Here's how you can install shader in Windows 10 Minecraft Bedrock Edition.

To enhance the Minecraft experience, you can install custom shaders. Here's how you can install shader in Windows 10 Minecraft Bedrock Edition.

## Windows 10 Version Minecraft Bedrock Edition

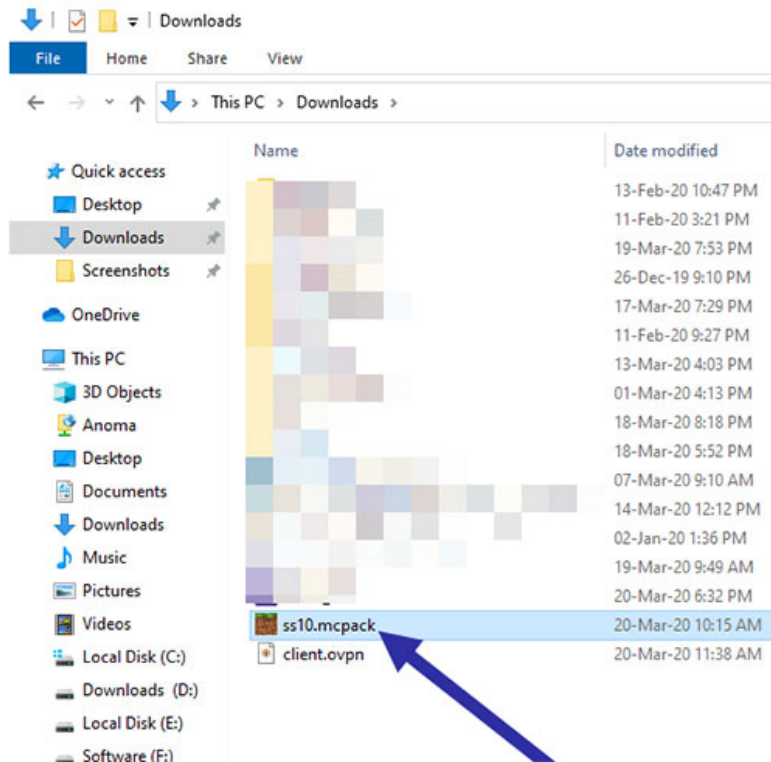

Compared to Minecraft Java Edition, the version of Minecraft Windows 10 or Bedrock is quite light and uses less resources. Of course, the Bedrock version does not have some features that appear in the Java version, mainly the F3 debug screen. However, you can still enhance your Minecraft experience by installing shader packages. Depending on the shader package, you can easily improve the look and feel of your Minecraft world with just a few clicks.

So in this post, let **TipsMake.com** show you how to install the shader package in Minecraft Bedrock version on Windows 10.

## Install shader in Minecraft Bedrock Edition

Before continuing, the article assumes that you already have the shader package you want to install. If you haven't already and want to try something new, use websites like **mcpedl.com**. This site has some of the best shader packages and more.

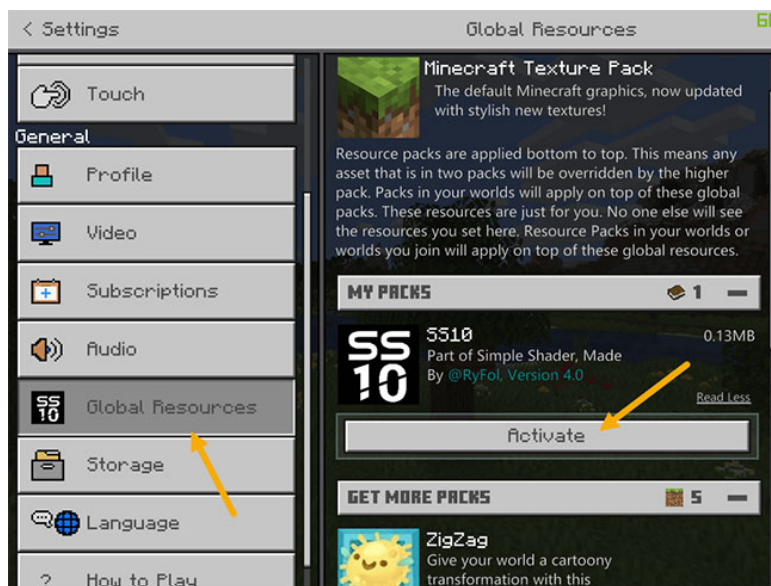

1. First, make sure you have downloaded your favorite shader package for Minecraft Bedrock Edition. Bedrock shader package will be in **.mcpack** file format . In the example case, the article downloaded the awesome **SimpleShader** shader package.
2. After downloading your favorite shader package, open **File Explorer** and find the downloaded file. Normally, it will be in the default **Downloads** folder.

Open File Explorer and find the downloaded file

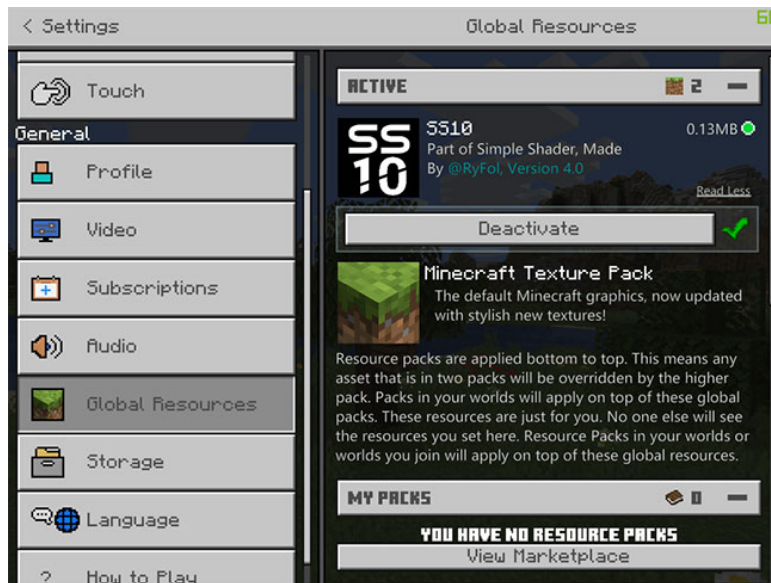

3. Now, double click on the shader package. As soon as you do that, Minecraft will open and enter the target shader itself. While the package is importing, you may see the message "**Import Started**". When done, you will see the success message.

4. After installation, the shader package will automatically be activated. If not, open the Minecraft settings page and go to the "**Global Resources**" tab . Expand the "**My Packs**" section and click the "**Activate**" button below the shader package.

Expand the "My Packs" section and click the "Activate" button

5. Performing the above action will activate the shader package and move it to the top.

The shader package is enabled

You have successfully installed and activated the shader package in Minecraft Bedrock Edition!

You have successfully installed and activated the shader package
