Step 3:

Switch to the main interface of the application, click **the plus icon** in the right corner of the screen to add linked devices. Then click on **fast network connection** .

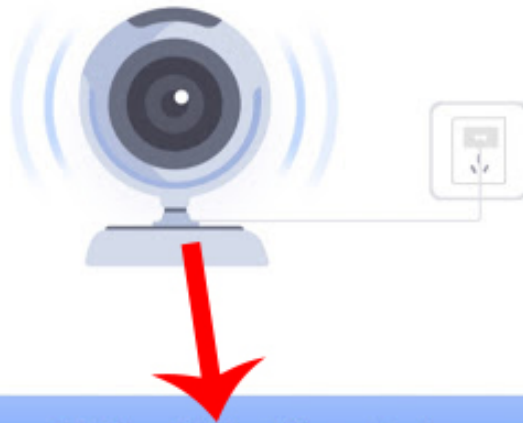

Step 4:

Now you need to bring your phone, or tablet, near the camera to wait for the connection. When you hear the dudu coming out, click **Hear dudu** . At this time, the application will ask users to **enable location on connected devices** to use.

When the screen displays the message `` **Successfully added** '' , your tablet, laptop, phone has successfully connected to the camera. We can click Share to our friends to send the link to other connected devices. At this time, the phone screen will display the location of the surveillance camera.

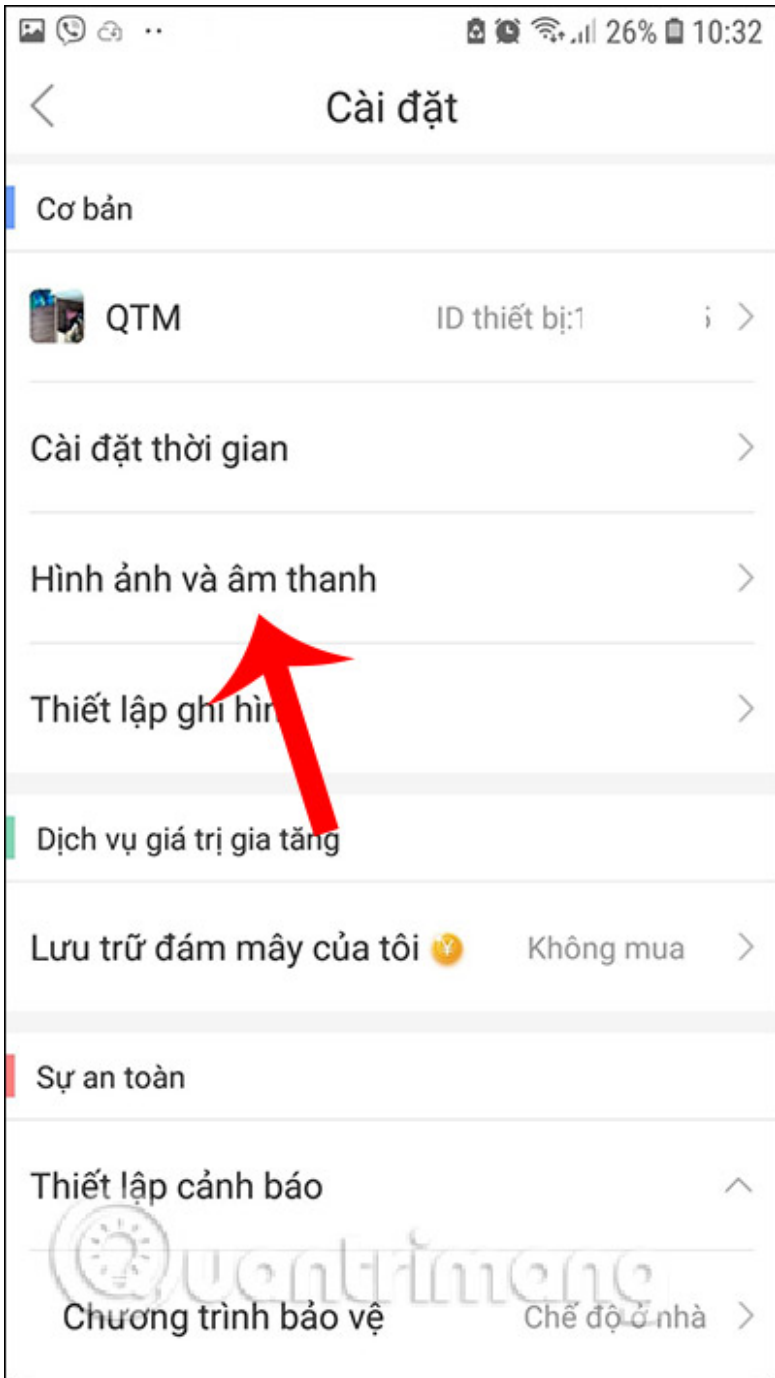

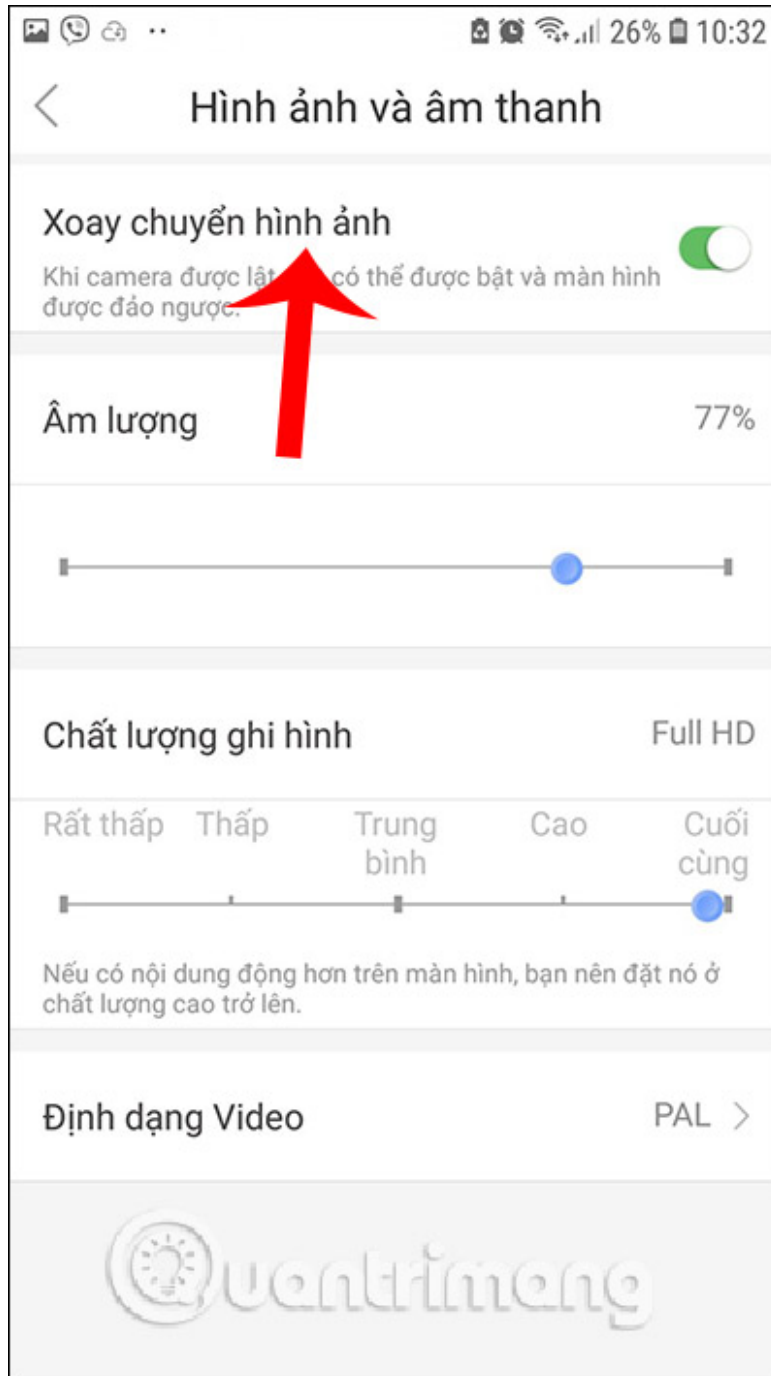

Step 7:

When first entering the monitor, the image may be flipped upside down. If so, we click on **the gear icon** to enter **Settings** . Display the Settings interface, click **Picture and sound** . Then activate **the Rotate image mode** .

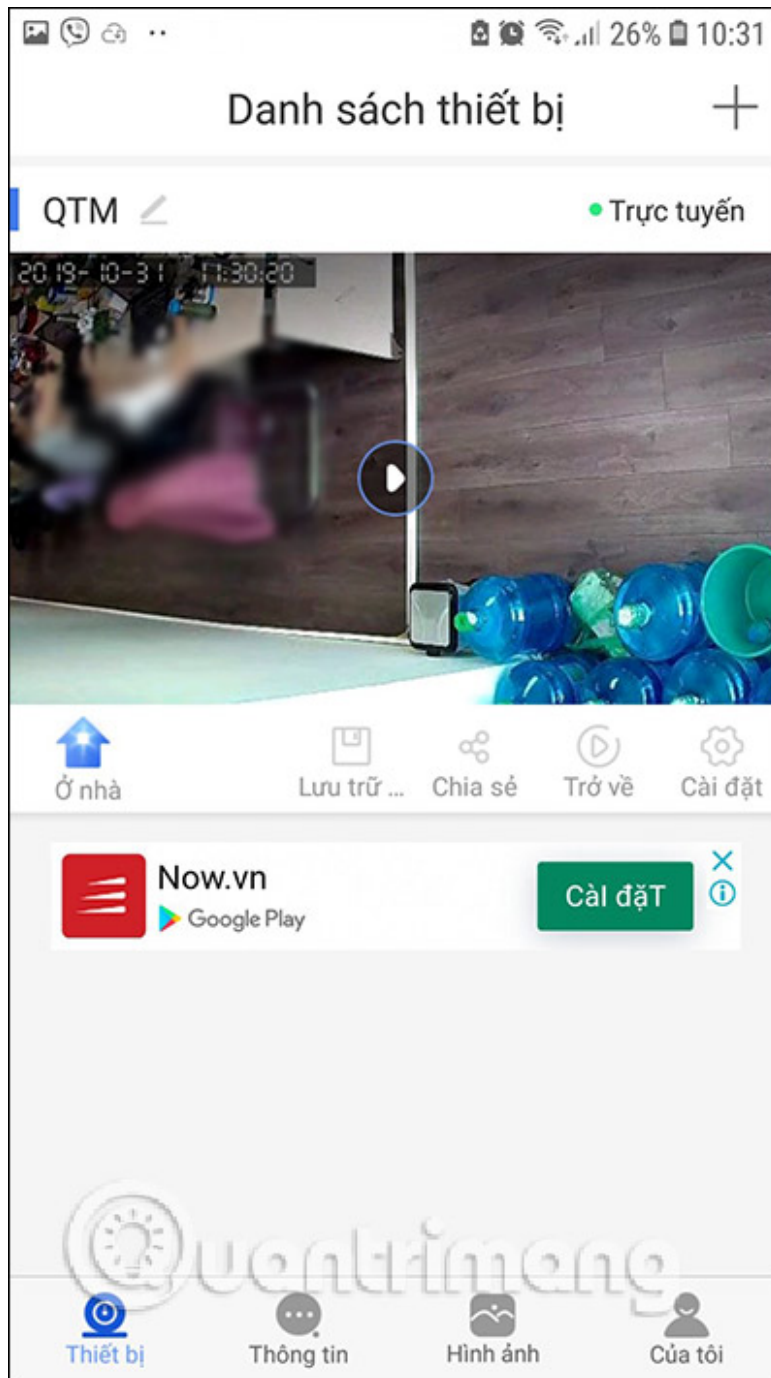

The resulting image was flipped in the right direction. To move to other locations we just need to move on the screen. Back to the Device interface on the application will see the device name that we have set to Online status.

So you know how to connect your phone, tablet to YooSee camera via WiFi connection. A camera can connect to multiple phones and tablets and without any restrictions.

I wish you successful implementation!
