

How to install VBA in Excel

To use VBA on Excel, we need to reset the installation.

For those who use Microsoft office toolset and often use advanced features, they will probably use VBA. VBA (Visual Basic for Applications) is the name of the programming language in Excel. It is easy to understand VBA to write lines, or commands to perform functions or other content.

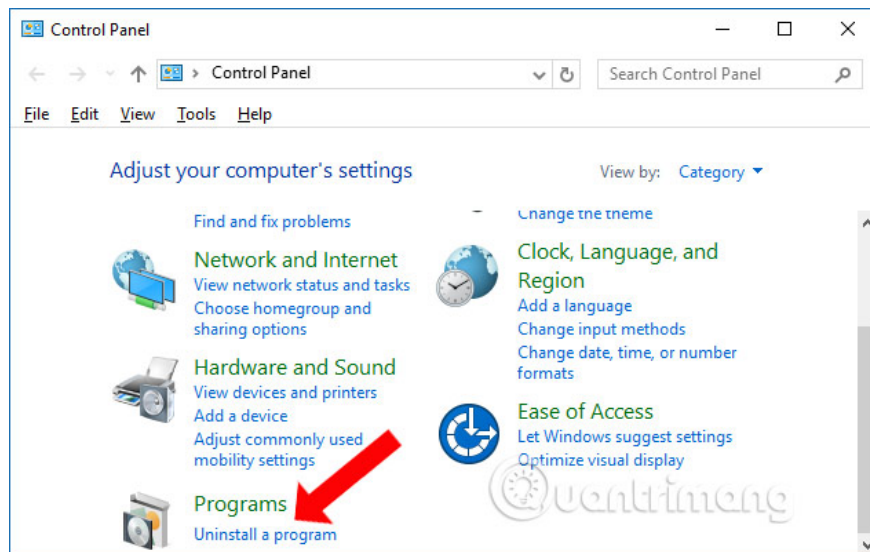

And by default when you install the full Office suite, VBA will be installed in Excel and Word applications. However, many people in the Office installation process will choose to install applications such as Word, Excel, etc., so VBA will be hidden. So how to install VBA on Excel?

Instructions for installing VBA on Excel

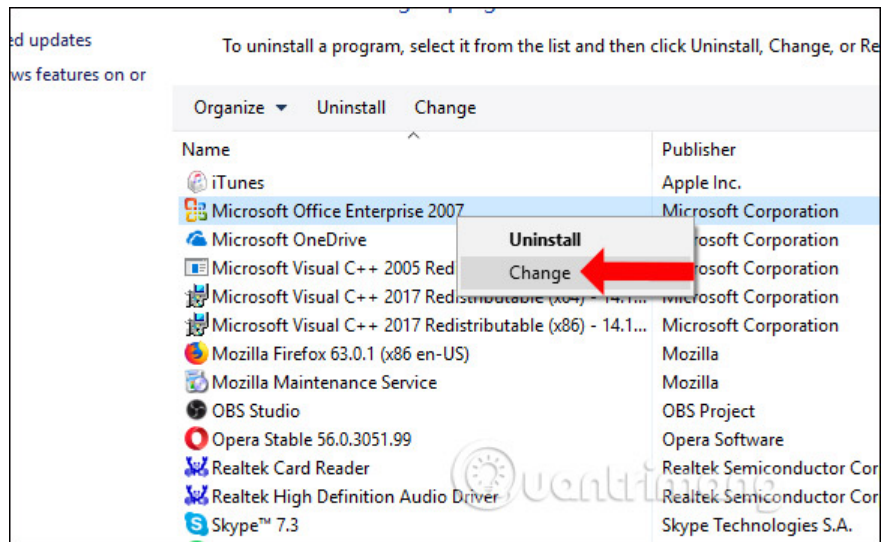

Step 1:

First go to **Control Panel** and then click on **Programs** .

Step 2:

In the list of installed software on your computer, go to **the Microsoft Office suite** installed. Right-click and select **Change** .

Step 3:

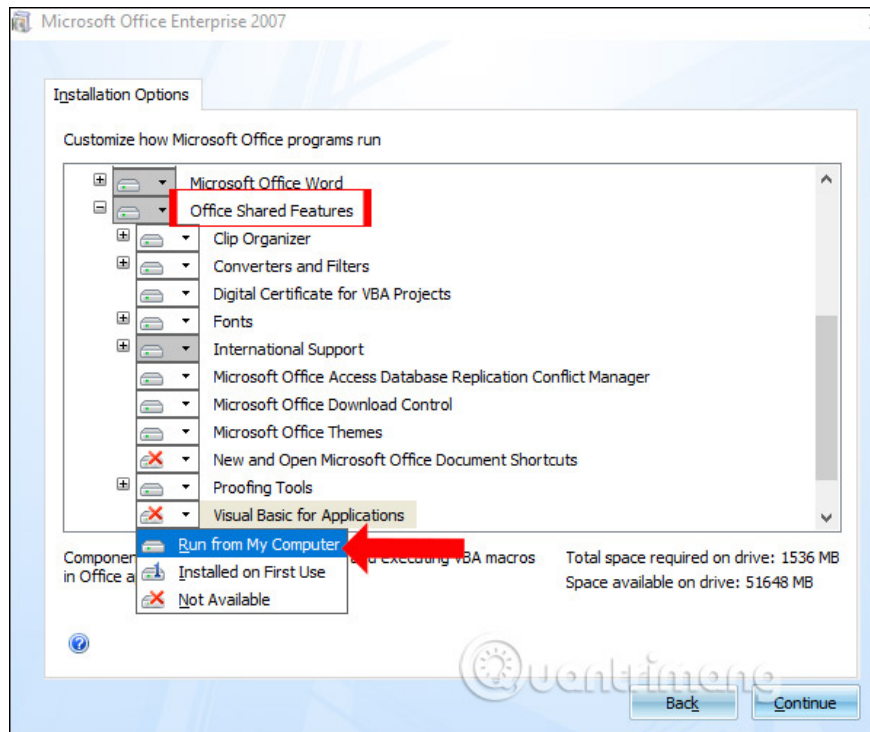

Switch to the new interface and select **Add or Remove Features** then click **Continue** to continue.

Step 4:

In the next interface, users will see the full range of Office applications. Find the **Office Shared Features** section , click **the plus icon** to expand the list.

Find the **Visual Basic for Applications** tool below. If VBA is not installed it will show a red X slash. Click on the tool and select **Run from My Computer** .

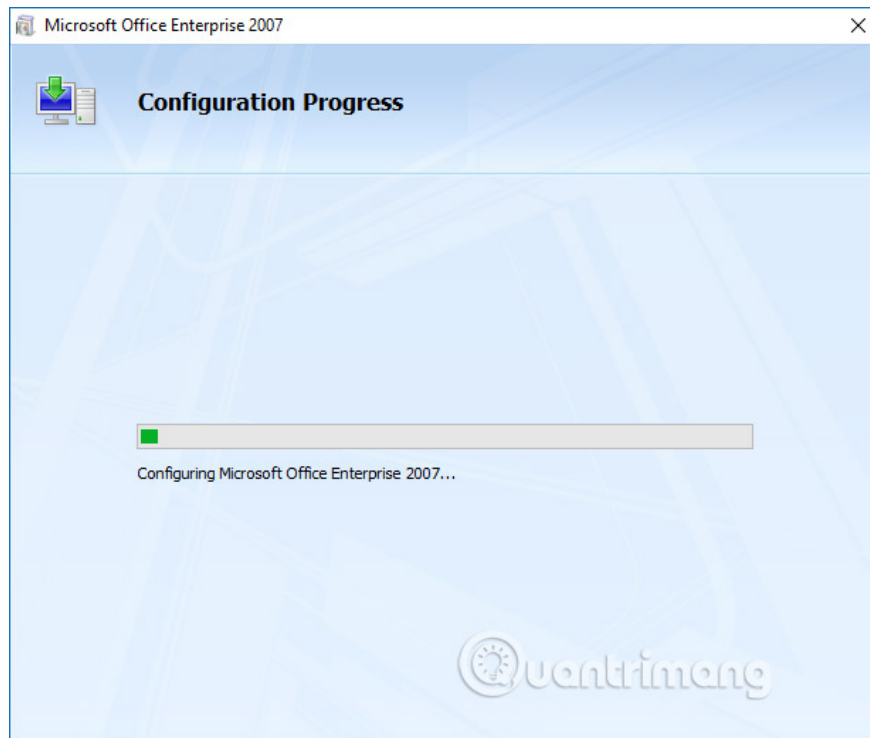

When the red mark disappears at the VBA tool, click the **Next button** to continue.

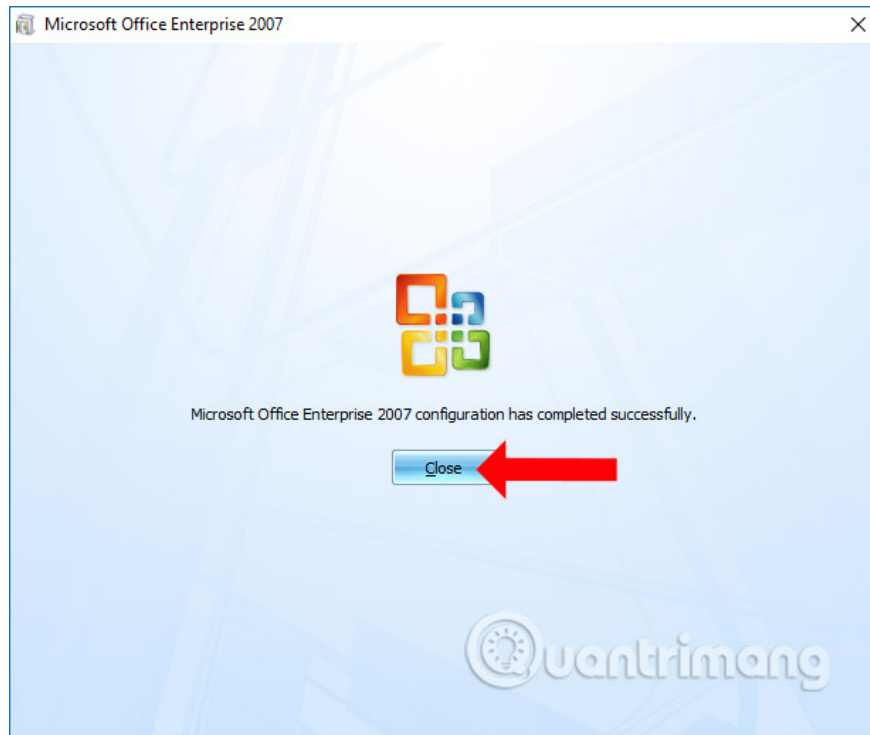

Step 5:

Soon the VBA tool will be installed on Office. Let's wait for this installation process to complete.

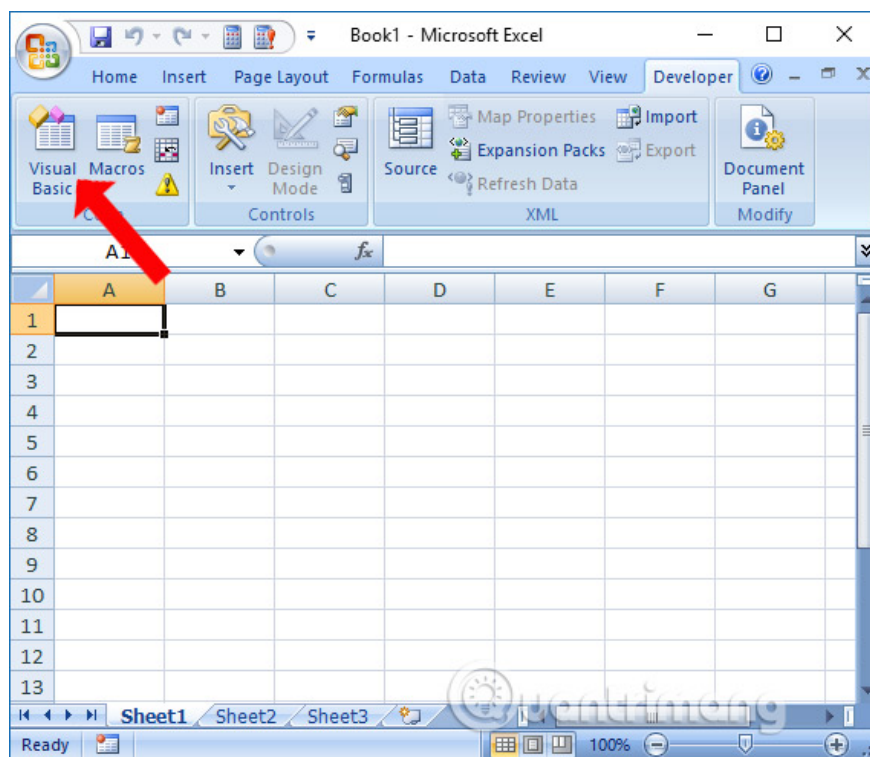

At the end of this interface, click **the Close button** to close.

Step 6:

You restart Excel and click the **Developer** tab on the ribbon bar to see the Visual Basic tool displayed on the left side of the same interface.

Above is how to install and open VBA in Excel. VBA will also be installed in Word, PowerPoint, Outlook, . in the Office suite, so you can follow the above method if you can't find VBA.
