

How to install Windows 7 from USB

We will guide you how to install Win 7 with USB from A to Z, start by creating a USB flash drive for installing Windows 7 and installing Windows 7 operating system from USB.

Windows 7 is like other operating systems, you can **install Windows 7 with USB**, hard drive or Win disk. But installing Win 7 using USB in particular or installing Windows from USB is generally the most economical, easy and chosen way. Moreover, after **creating a USB flash drive**, you can reuse it many times to install on multiple computers. And we will not need to use the DVD drive from the publisher on the computer and can still install Win quickly.

In this article, we will guide you to read how to install Win 7 with USB from A to Z, start by creating USB install Win 7 to install and set up Windows 7 operating system with a USB device.

PREPARING TO WIN WIN 7 BY USB

1. 1 USB minimum 4GB, NTFS format.**Note:** During the process, USB will be reformatted so you need to store all data in the USB to another device.
2. File .ISO Windows 7
3. USB creation tool installs Windows 7

STEPS TO WIN WIN 7 BY USB

Step 1:

First of all, you need to download the file. ISO of Windows 7 Professional (x86) or (x64). Next, install Windows 7 USB software DVD Download tool supports Windows 7 installer on USB according to the link below.

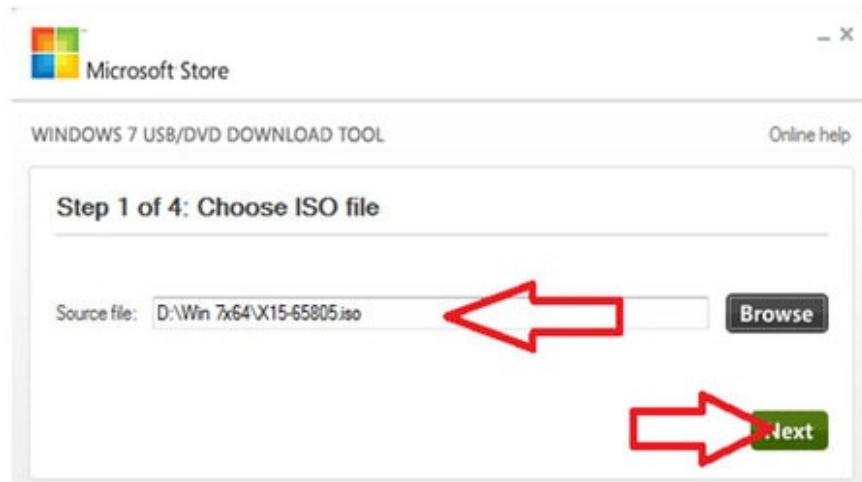

1. Download Windows 7 USB / DVD Download Tool

Requires computer to install NET Framework 2.0 or higher. Download the latest version of NET Framework according to the link below.

1. Download the .NET Framework for free

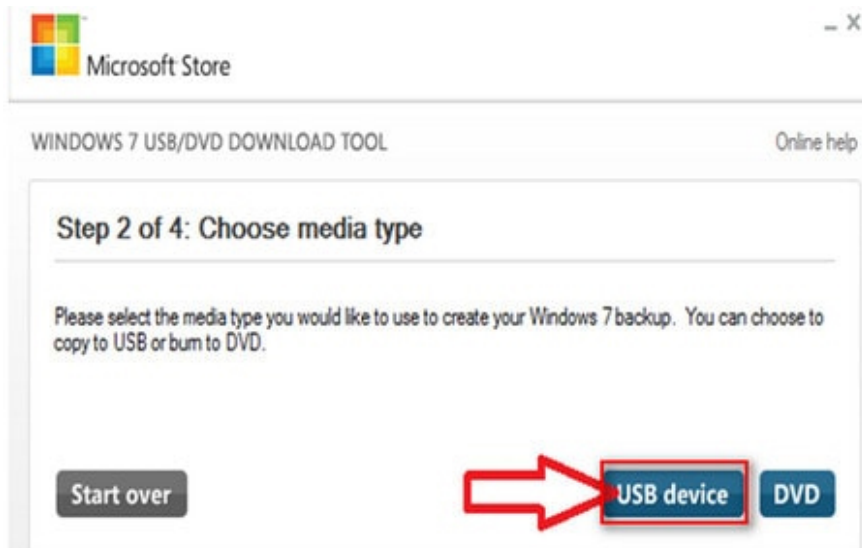

Step 2:

Launch the Windows 7 USB / DVD Download Tool software. At the first interface click on the **Browse** button and then locate the folder containing the .ISO file. Then click **Next**.

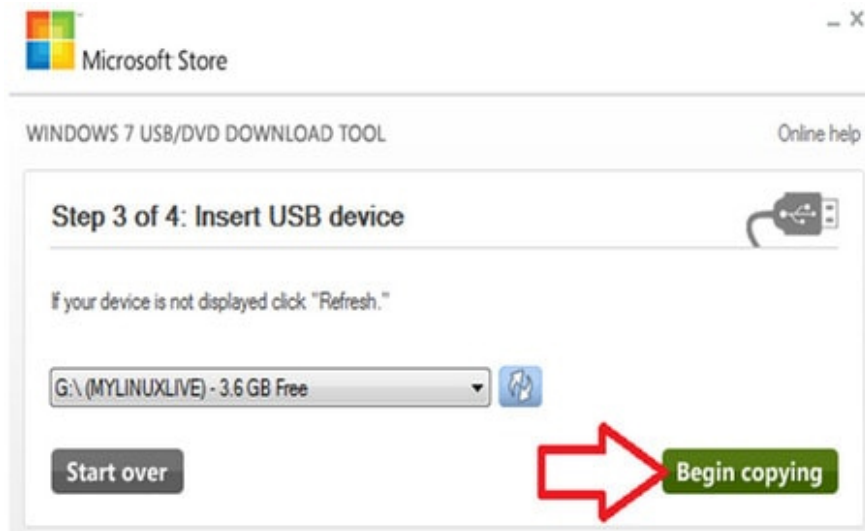

Step 3:

Here, users will select the installation tool Win 7 is **USB device** .

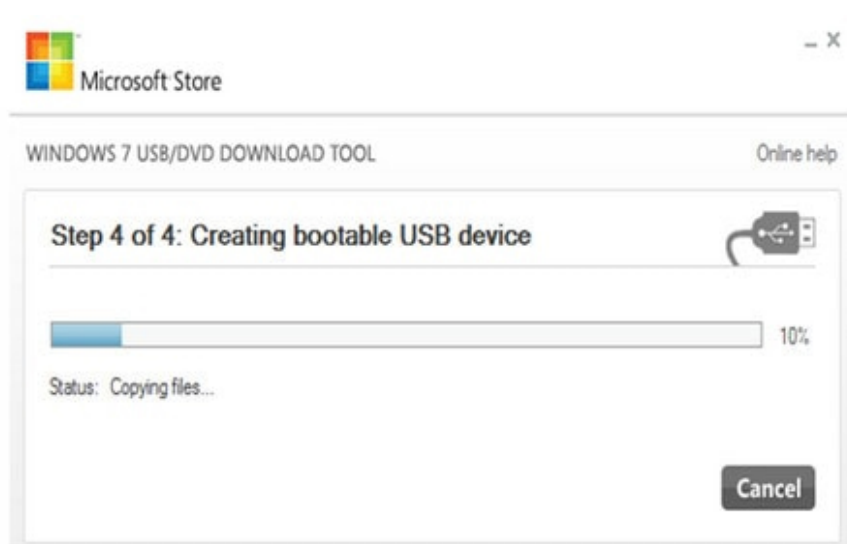

Step 4:

Next, you need to select the USB device in progress of installing Windows 7, in case the computer is using multiple USB devices. Click **Begin copying** .

We wait for the complete Windows 7 USB boot process to create USB Windows 7 installation.

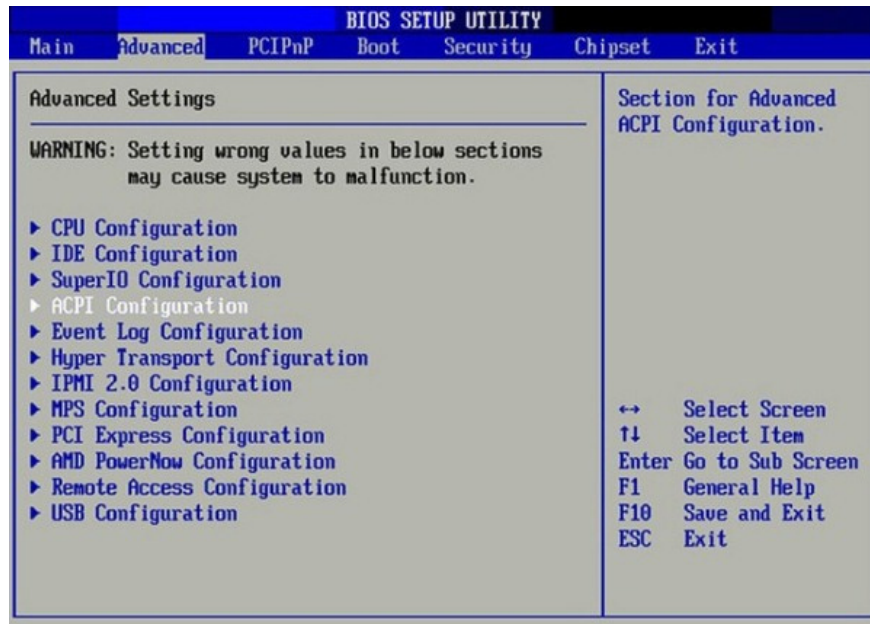

In addition, readers can also choose a number of other tools such as Rufus, Easy2Boot, USB Hiren's boot to create USB boot if desired.

Step 5:

First of all, we will need access to the BIOS on each device. The key combination on each device to enter the BIOS will vary, depending on the model. Readers refer to the article [Guide to BIOS on different computers](#).

In the BIOS interface, go to the section to select the operating system boot order from USB. Read the article [How to set up BIOS to boot from USB / CD / DVD, external hard drive](#).

Step 6:

Soon you will get to the system installation interface. First, we will **select the language and format the keyboard** as shown below, then click **Next** to continue.

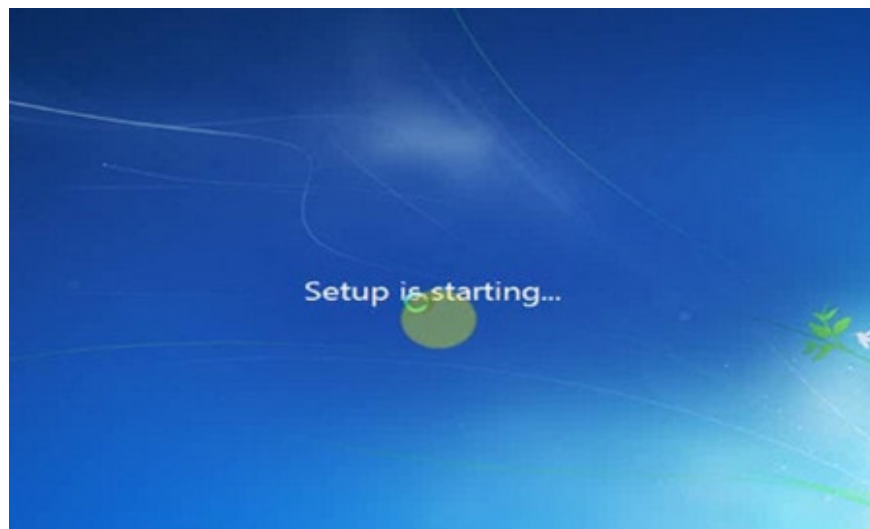

Step 7:

Next, you need to click **Install now** to install the program on the system.

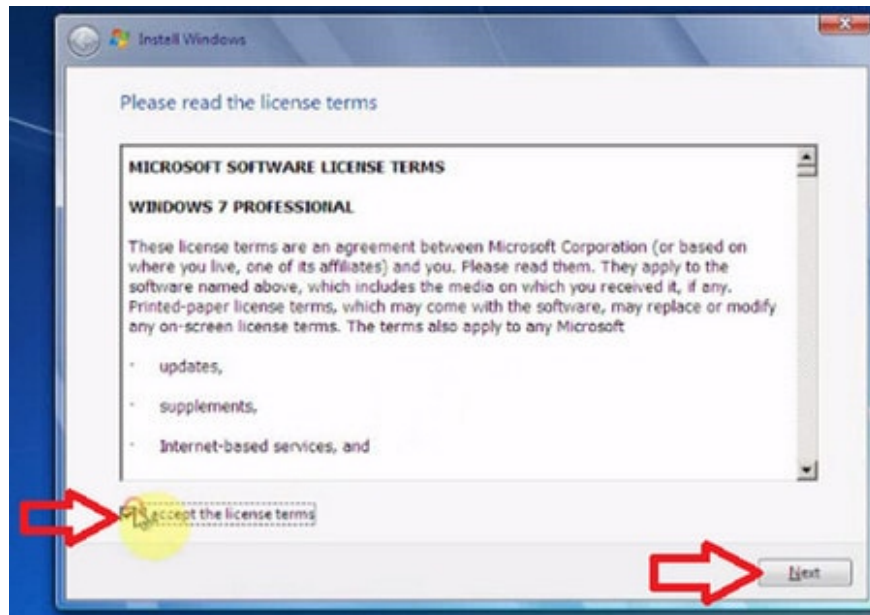

We need to wait for the setup process to be done.

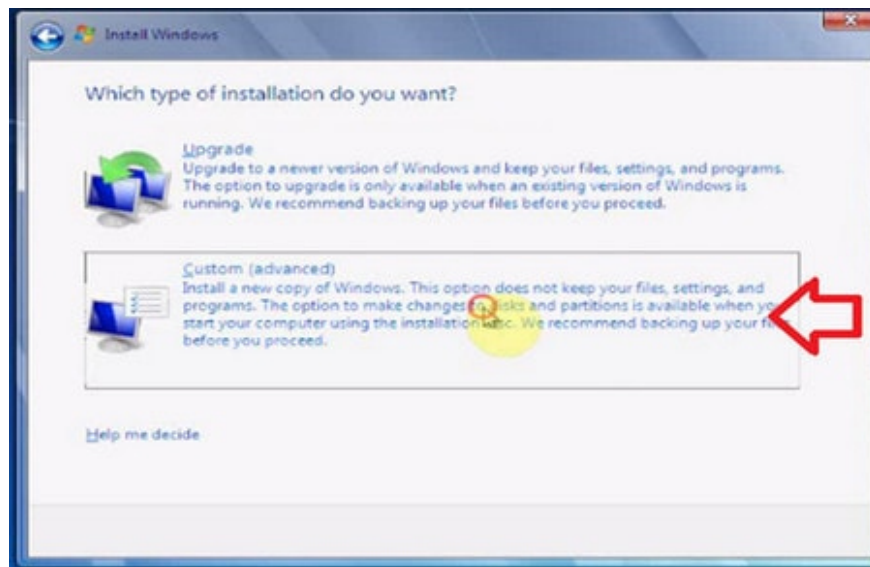

Step 8:

The Microsoft terms of use interface appears, click **I accept the license terms** , then click **Next** .

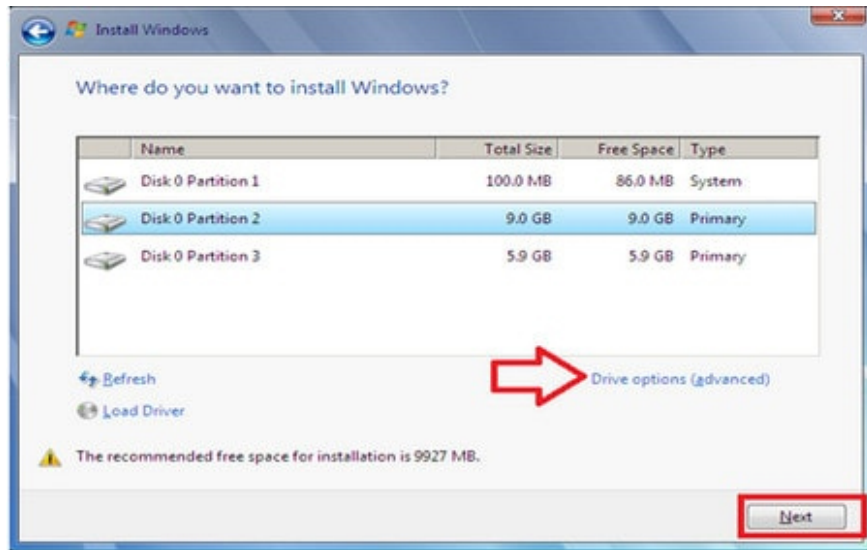

Step 9:

In the next interface, you need to select the operating system partition. Click **Next** to continue if the hard drive has not been installed before.

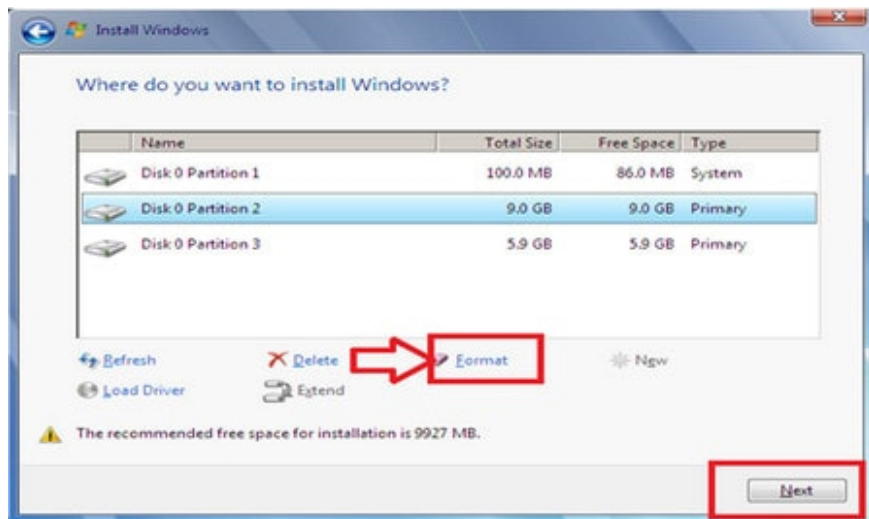

If the computer is pre-installed with the operating system, we need to reformat the installation drive. You select **Driver options (advanced)** and then click **Next**.

Step 10:

Next, select the partition and click **Format** below. Click **Next** to proceed.

Step 11:

Finally the Windows 7 installation interface appears. Users need to wait for this installation to be completed.

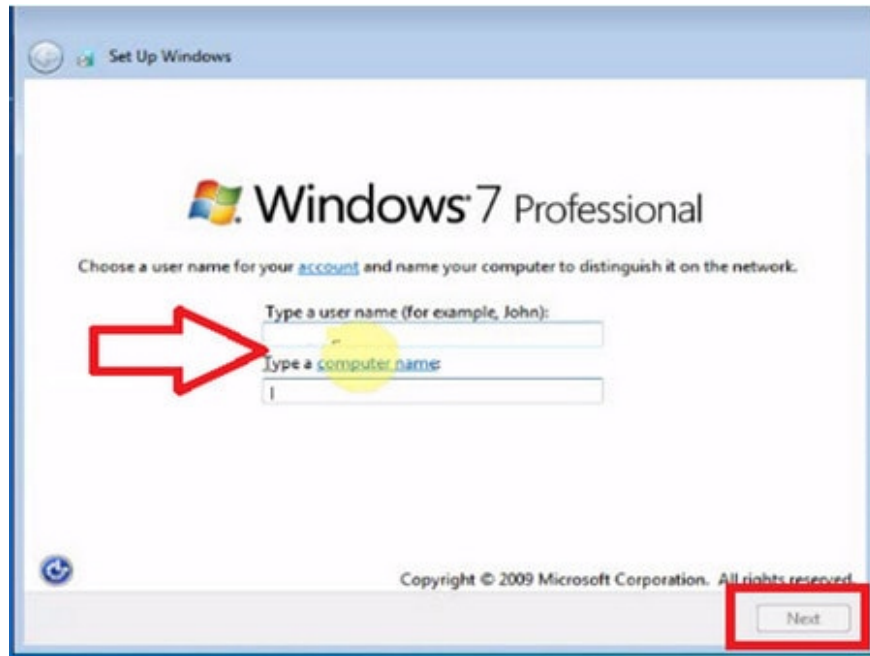

During the installation process, the computer will automatically reboot and then continue the setup work.

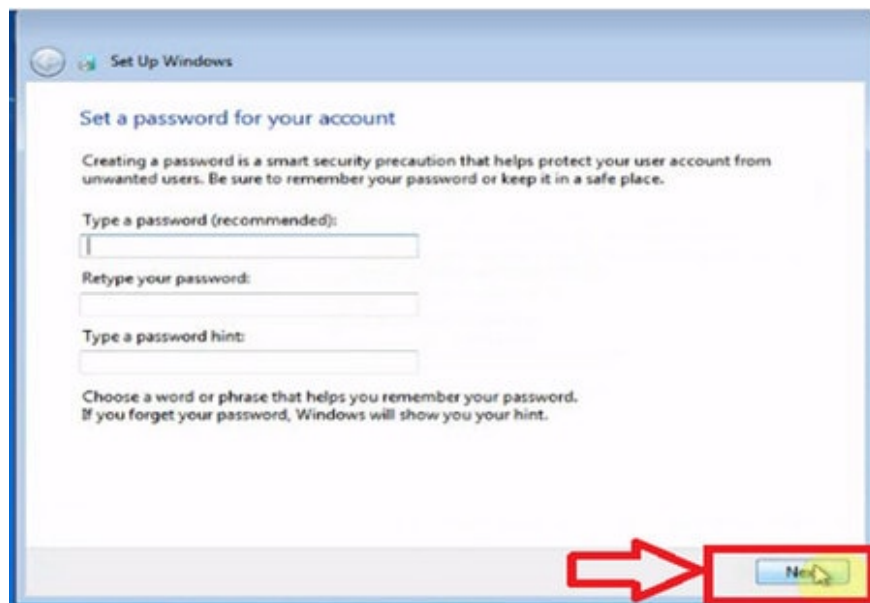

Step 12:

After that, the user will enter the user information as shown below and click Next. First of all, the **username** is **Username** . Click **Next** .

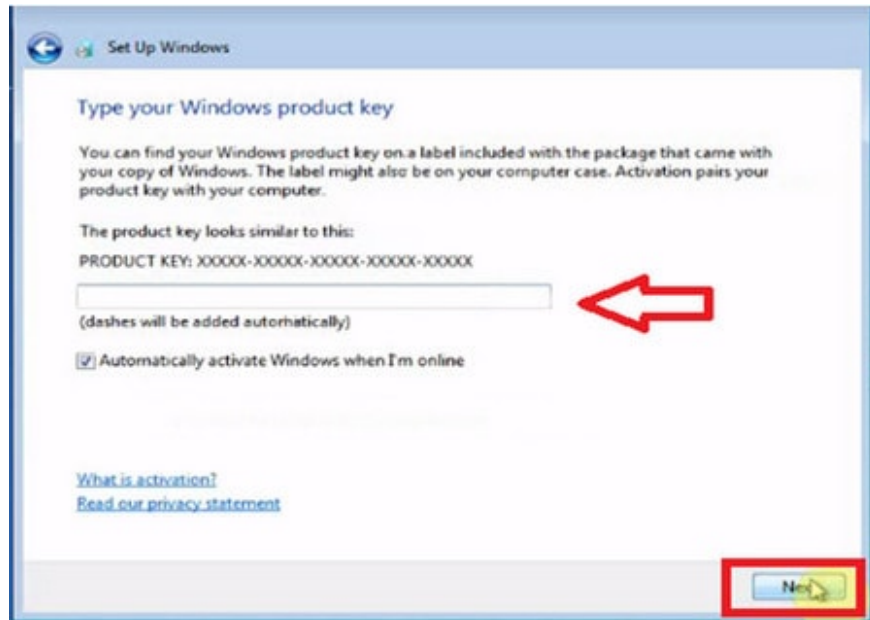

Then **enter the password** depending on the user chooses or not. Click **Next** to continue.

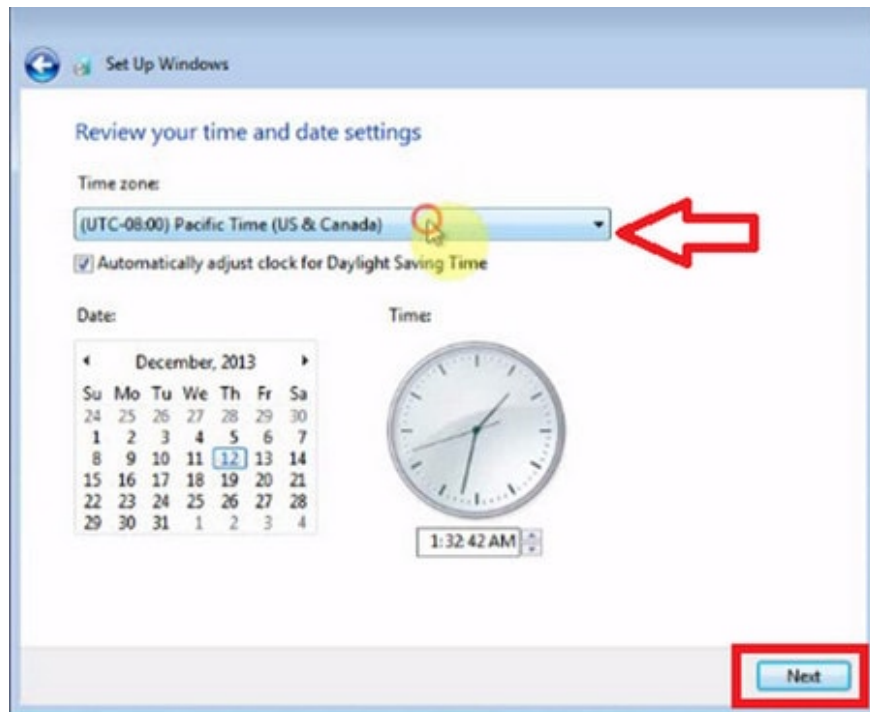

Step 13:

In the next interface, you will enter the license code if available in the **Product Key** box. In case there is no code, leave the check box in Automatic . Next click **Next** .

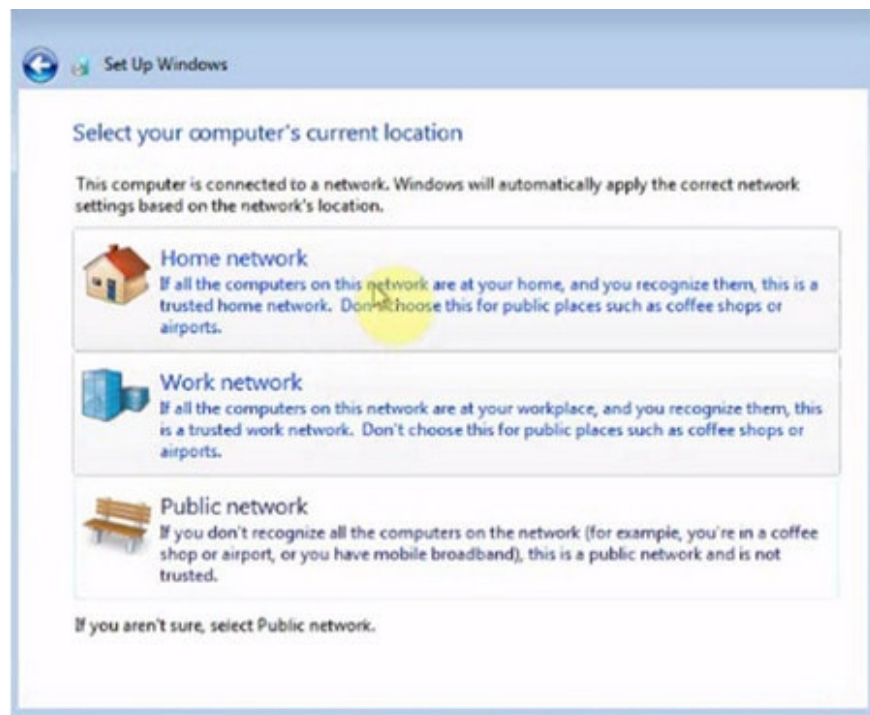

Step 14:

Then the user sets the time, the standard time zone for the computer. Click **Next** to proceed to the next step.

Step 15:

The next step is to select the network connection you are using on your computer and click **Next**.

Step 16:

Thus, the process of setting up Windows 7 is complete. The last step is to wait for the computer to reboot.

Above is a tutorial on how to install Windows 7 operating system from a USB device. In case you do not have a DVD installation disc or a disc with problems, you can use a USB device to boot Windows 7 installation as the above method.

I wish you all success!
