

How to integrate images into text on Photoshop

Integrating images for text, or creating text backgrounds in Photoshop will make the text more interesting and unique.

When writing text on photos in Photoshop, for those with basic Photoshop skills, just choose colors for the text. However there are many ways we can change the font, create different typefaces, in addition to using fonts such as integrating images into words.

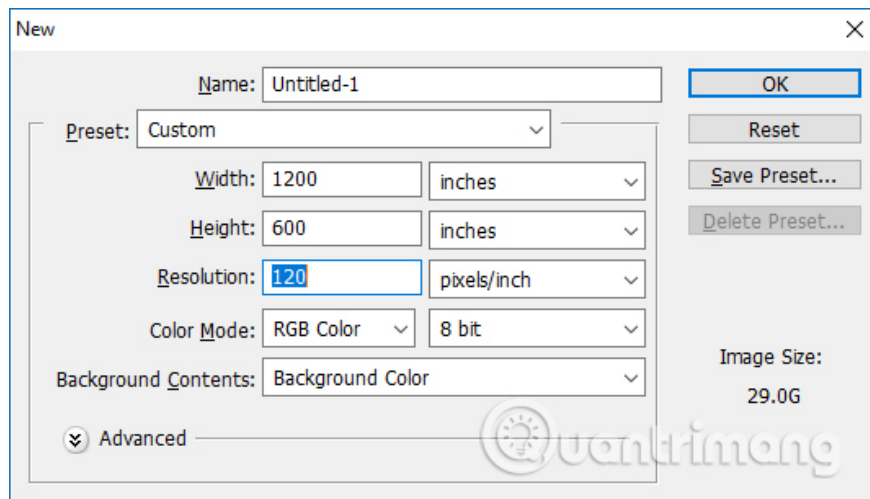

Text-to-text style can be used to create text backgrounds using different images. Then the word will not only have simple colors but will be replaced with colors on the image. The following article will guide you how to integrate photos into text in Photoshop.

Instructions for dubbing images into words on Photoshop

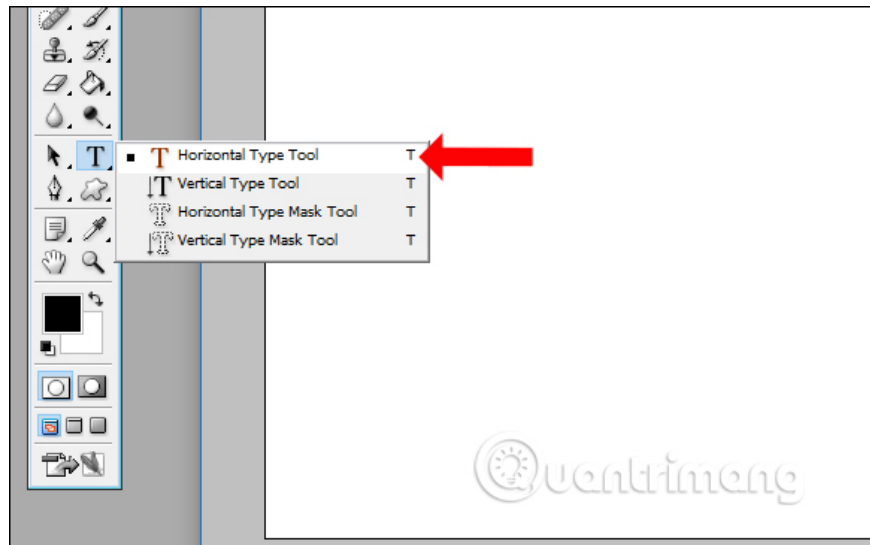

Step 1:

First you need to press **Ctrl + N to open a new layer** . The resolution part is about 150-300 pexels / inch.

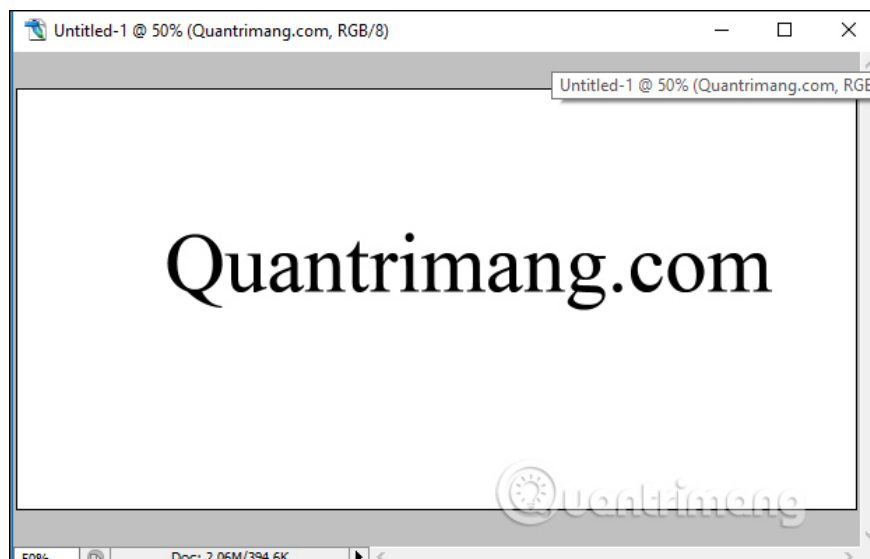

Step 2:

Right-click on **the T text box** and select the **Horizontal Type Tool** to write the letter.

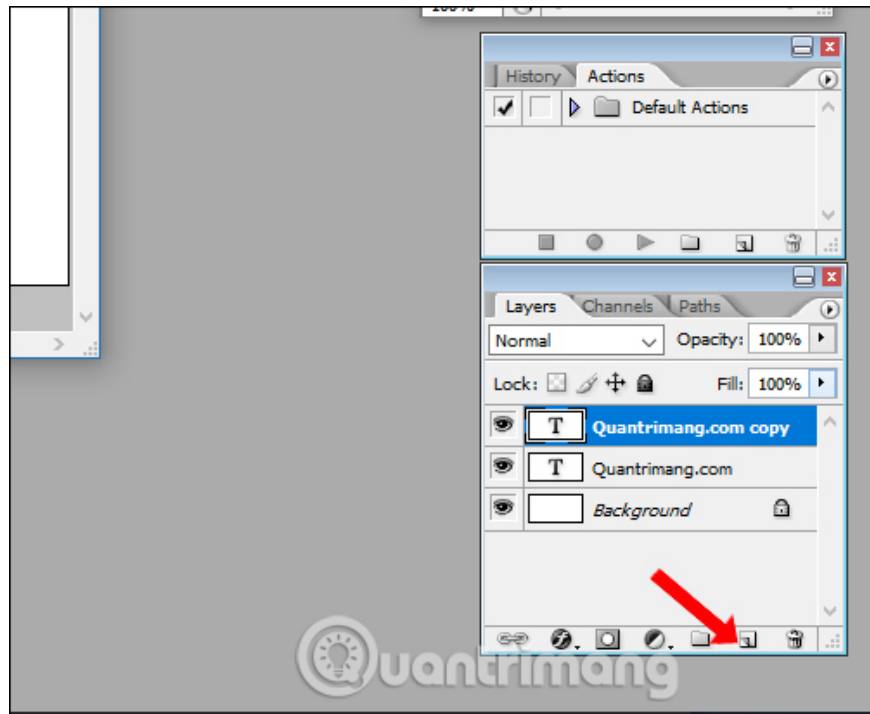

Step 3:

Write the text on the new layer created on the interface. We choose the font, font size depending on the needs of use.

Step 4:

Continue **dragging the text layer down to the Create a new Layer icon** to duplicate the text field. You will then be added a new text layer.

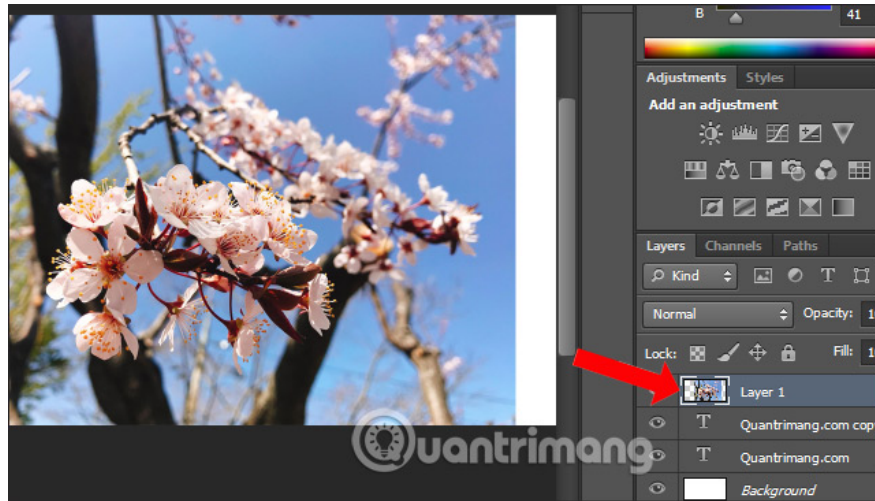

Click on the newly created text layer, then press Ctrl + T again and hold down Ctrl to **create it as a shadow and** press Enter as shown below.

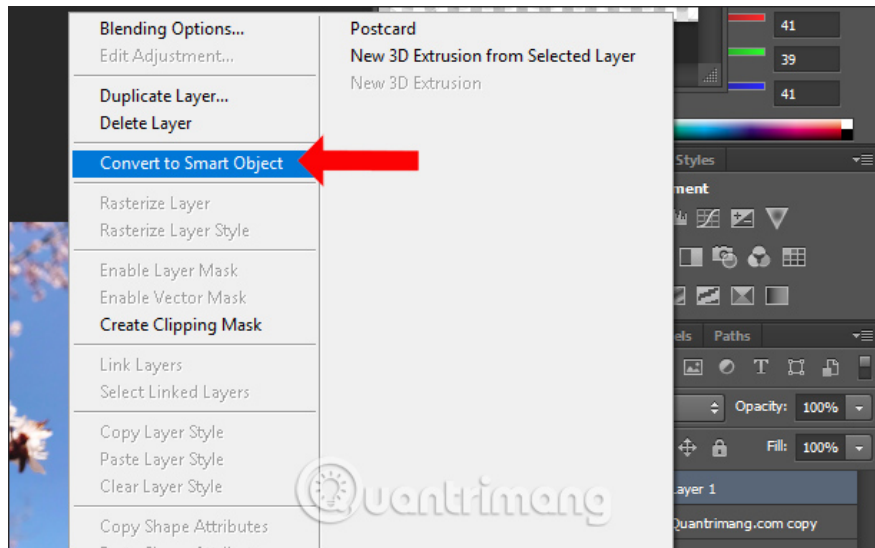

Step 5:

Open the image to select the text on the computer and drag and drop into the interface of the text on Photoshop. The image will overwrite the text on Photoshop.

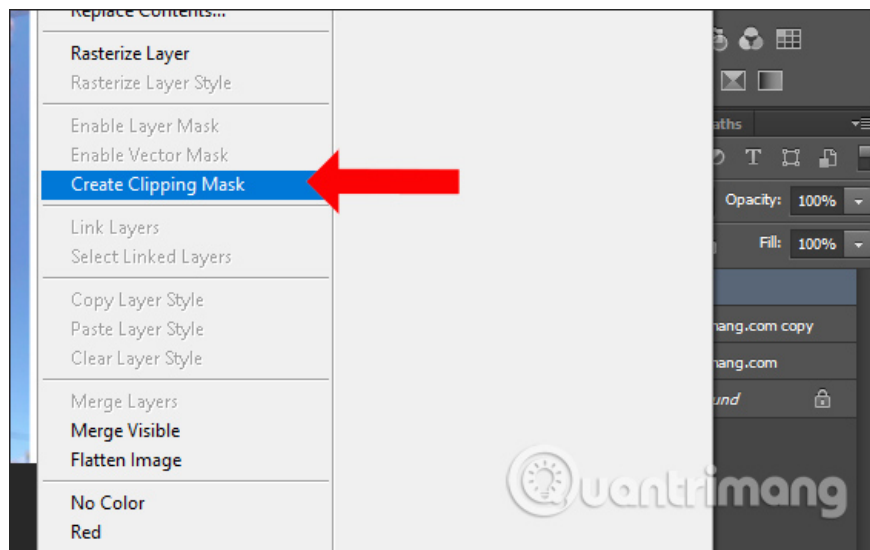

Step 6:

Right-click on the **image layer** and select **Convert to Smart Object** .

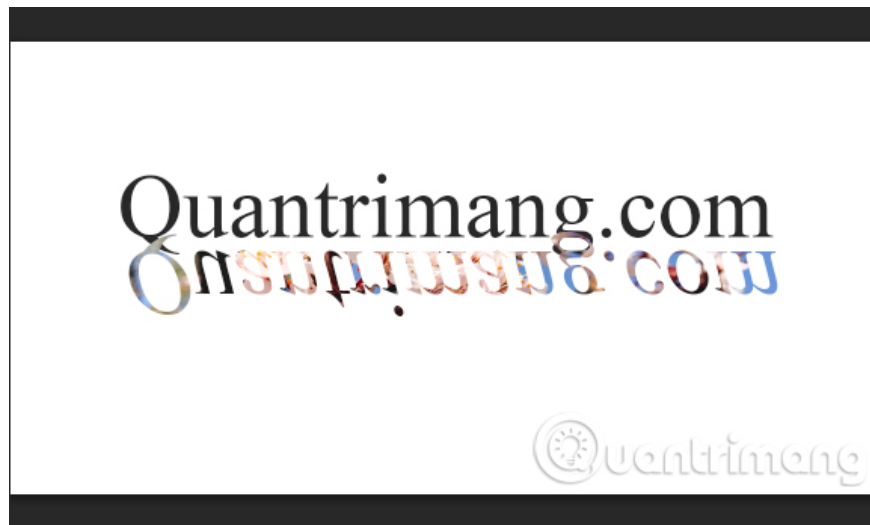

Right-click and choose **Create Clipping Mask** to hide the image in the text.

Step 7:

The result of inserting the image into the text is as follows.

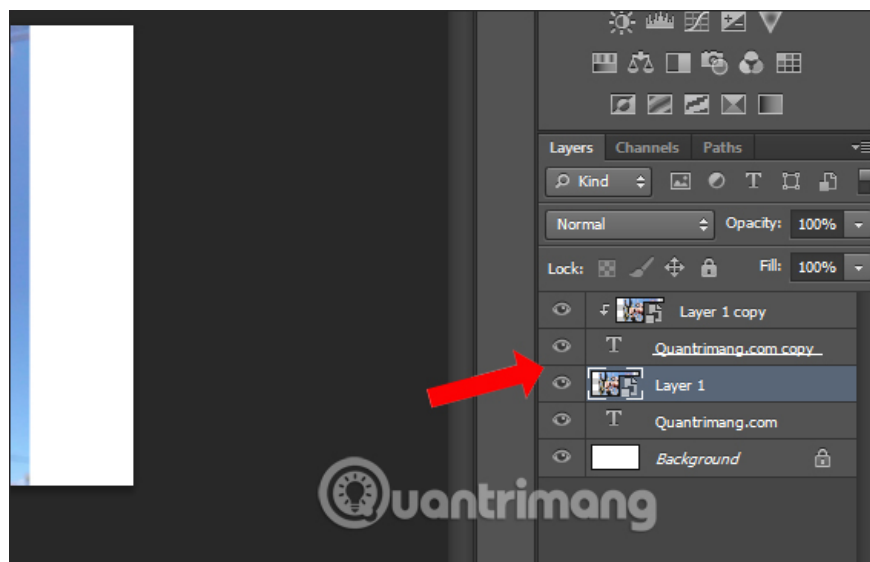

Continue to **select the Image layer and** then press **Ctrl + J**. Or you can drag and drop the image to the Create a new Layer icon to duplicate the image layer.

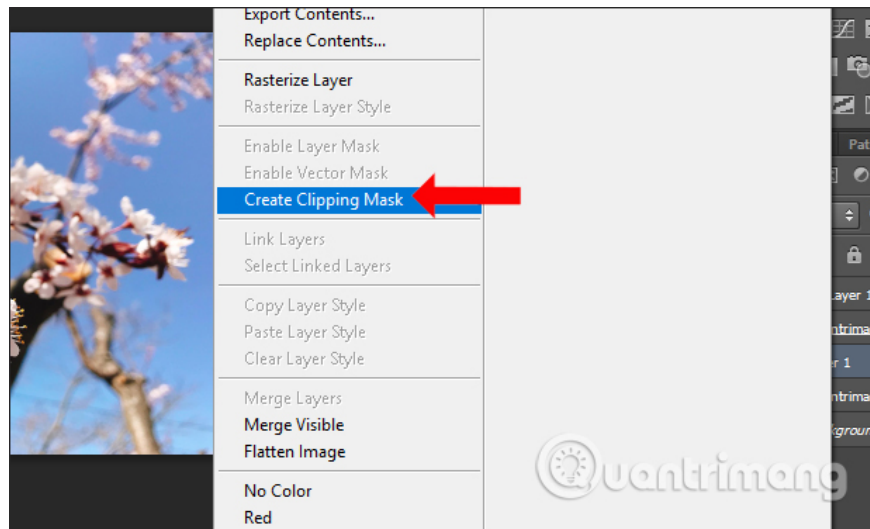

Step 8:

You **drag the original image layer between the two text layers** , and you will see the selection of the text layer obscured by the image.

Right-click on **the image layer** and choose **Create Clipping Mask** to create a selection of the text and also hide the image.

The resulting image will be inserted into both text areas as shown below.

Step 9:

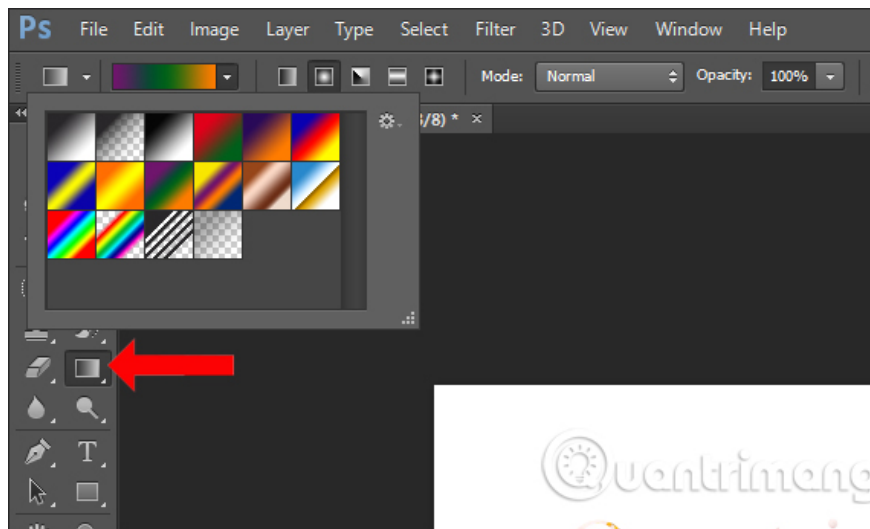

Next, the user can click on **the image layer** and press **Ctrl + T** to **adjust** it accordingly. This will display the following frame for alignment. We can drag or shrink the frame to select the details of the image into the text.

The user makes turns on both text layers.

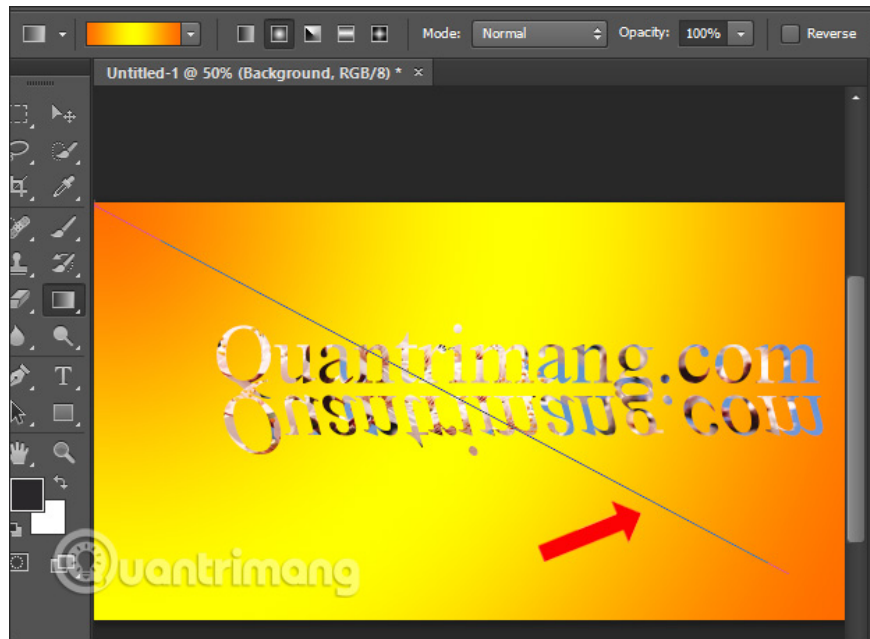

Step 10:

Finally, users can **replace** other **background** for text. Or use the current background, then click on the Gradient tool to select a color style for the Background.

Select a color style and then click on the image and drag a diagonal line down the image. Finally we will get the colored wallpaper as below. If you want to reverse the color range, drag the line as well.

So you have to insert the image into the text in Photoshop, plus the effect of italic, shadow. If you are more technical, creating effects for text, as well as adding colors to the background will be more beautiful, artistic than the picture you painted in the article.
