

How to link notes together on iPhone

The Notes app on iOS 17 has added the ability to link notes together. We can link to notes that you recently created or link to notes that have been created a long time ago.

The Notes app on iOS 17 has added the ability to link notes together. We can link to notes that you recently created or link to notes that have been created a long time ago. Users can then easily switch from one note to another, whether there is the same folder where the notes are stored on the iPhone or not. The following article will guide you to link notes together on iPhone.

How to link recent notes on iPhone

At the Notes app on iPhone, you open the note and write the content as usual. Next, to insert a note, enter **the >> symbol** where you need to insert a note.

Now **display the 6 most recent notes** you have created on the application. You just need to click on the note that we want to insert in the content of the note we are creating.
