

# How to lock iPhone 6 does not require updating

If you have ever overcome the two most urgent errors of an iPhone 6 lock, one cannot check \* 101 # and the other USSD codes lead to the inability to check the account and recharge, the two cannot be activated. FaceTime and iMessage lead to unfairly deducted money.

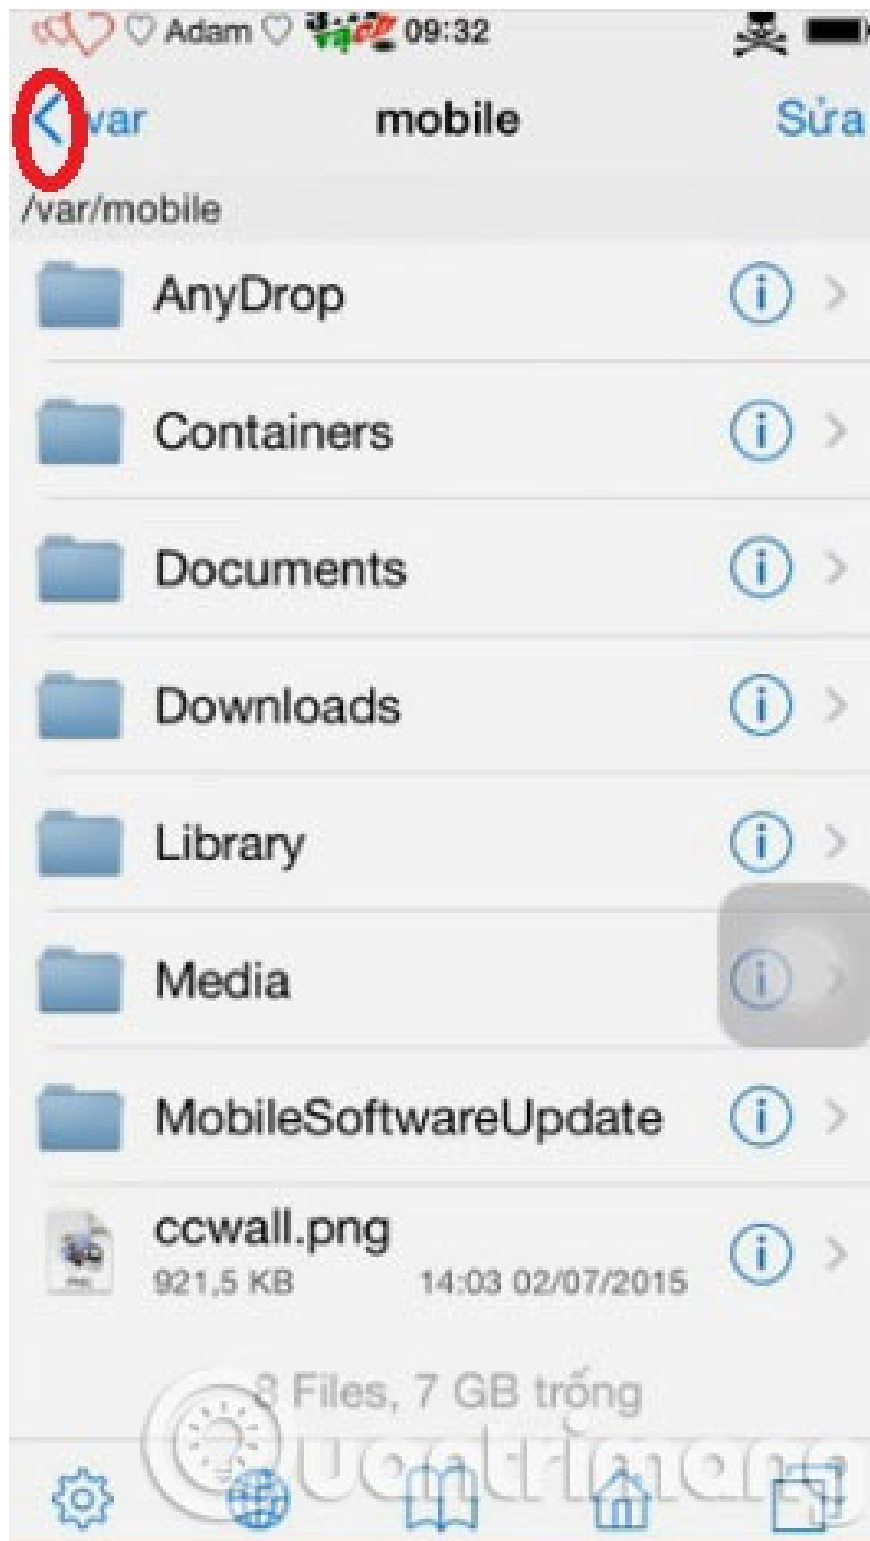

If you have ever overcome the two most urgent errors of an iPhone 6 lock, one cannot check \* 101 # and the other USSD codes lead to the inability to check the account and recharge, the two cannot be activated. FaceTime and iMessage lead to unfairly deducted money.

However, how much error correction on our iPhone 6 lock will be lost if we manually update the network update like a regular iPhone, while the iPhone always requires updating whenever there is a new one if we enter **Settings => General => About** .

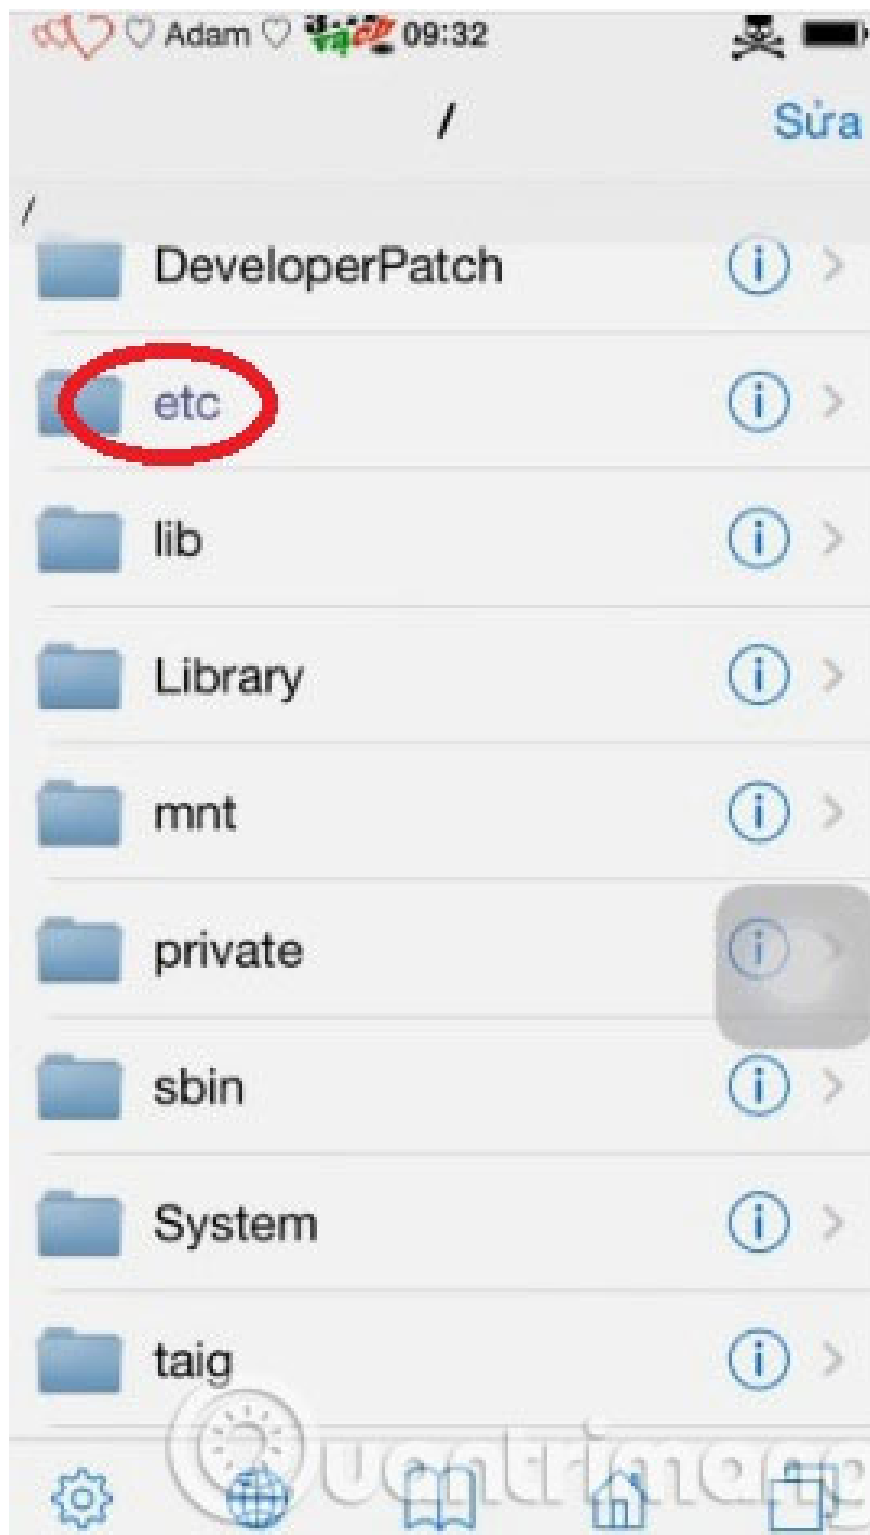

So, the best way after fixing iPhone 6 lock error is to prevent the update request, this action also uses iFile.

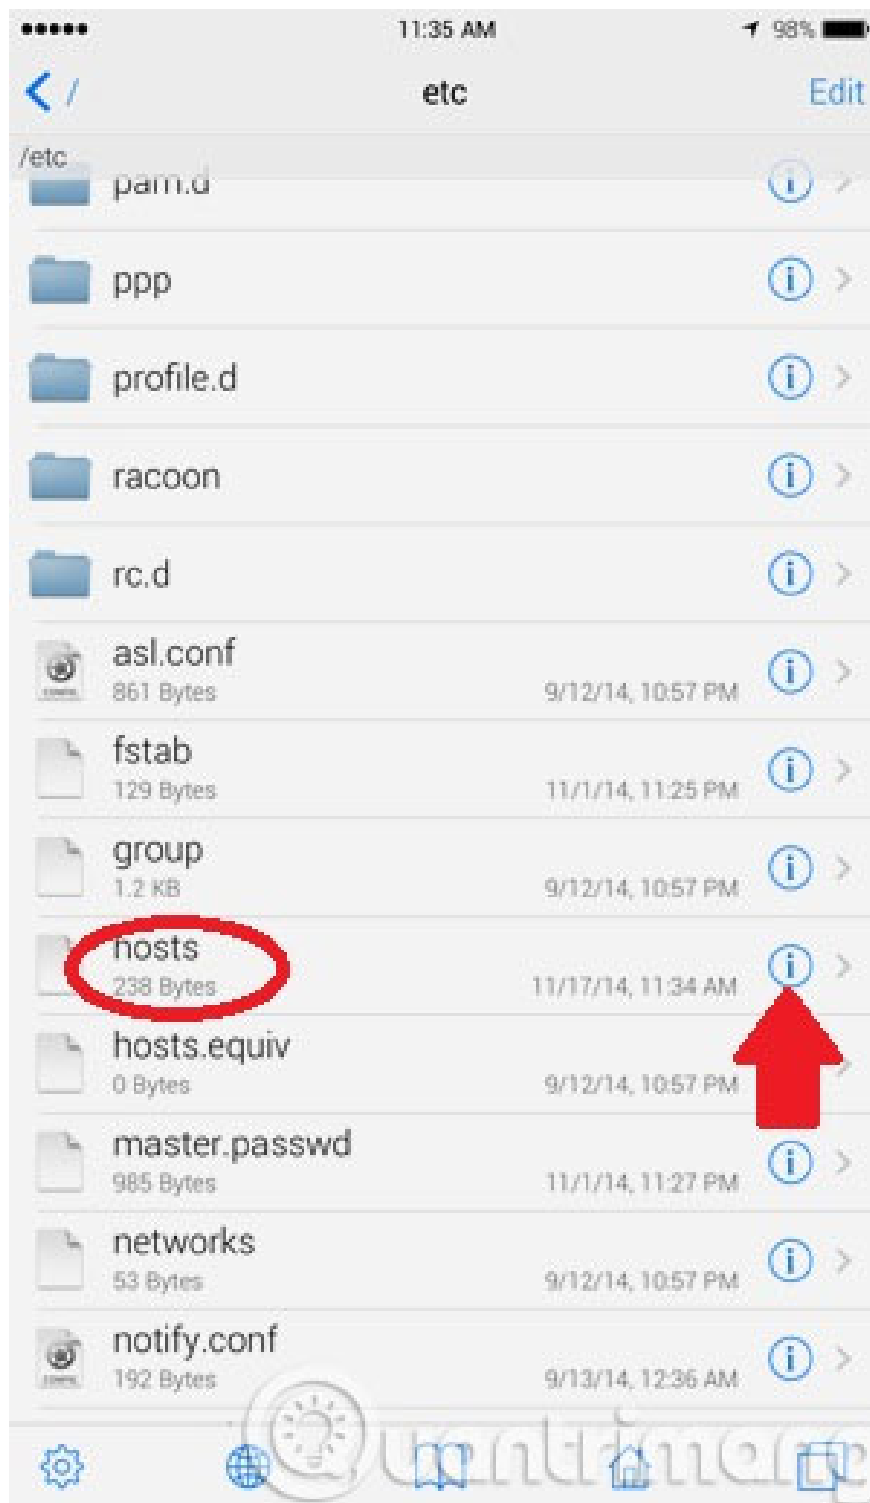

**Step 1** : Open iFile and press the back icon until the root folder.

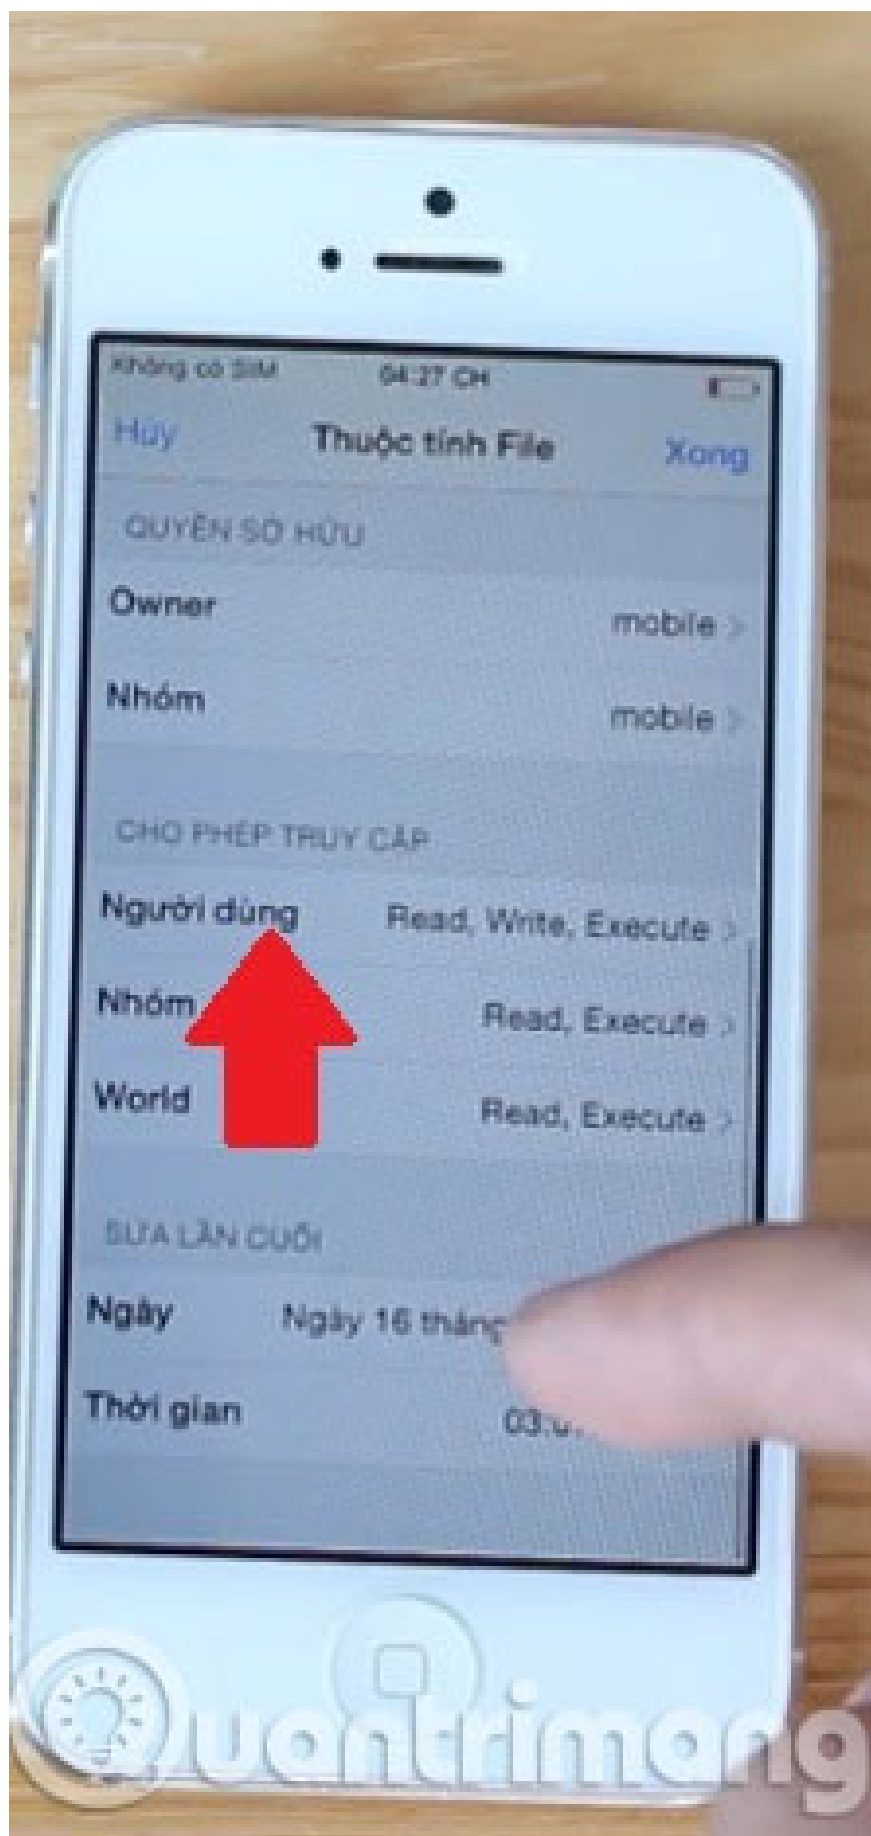

**Step 2 :** Go to etc.

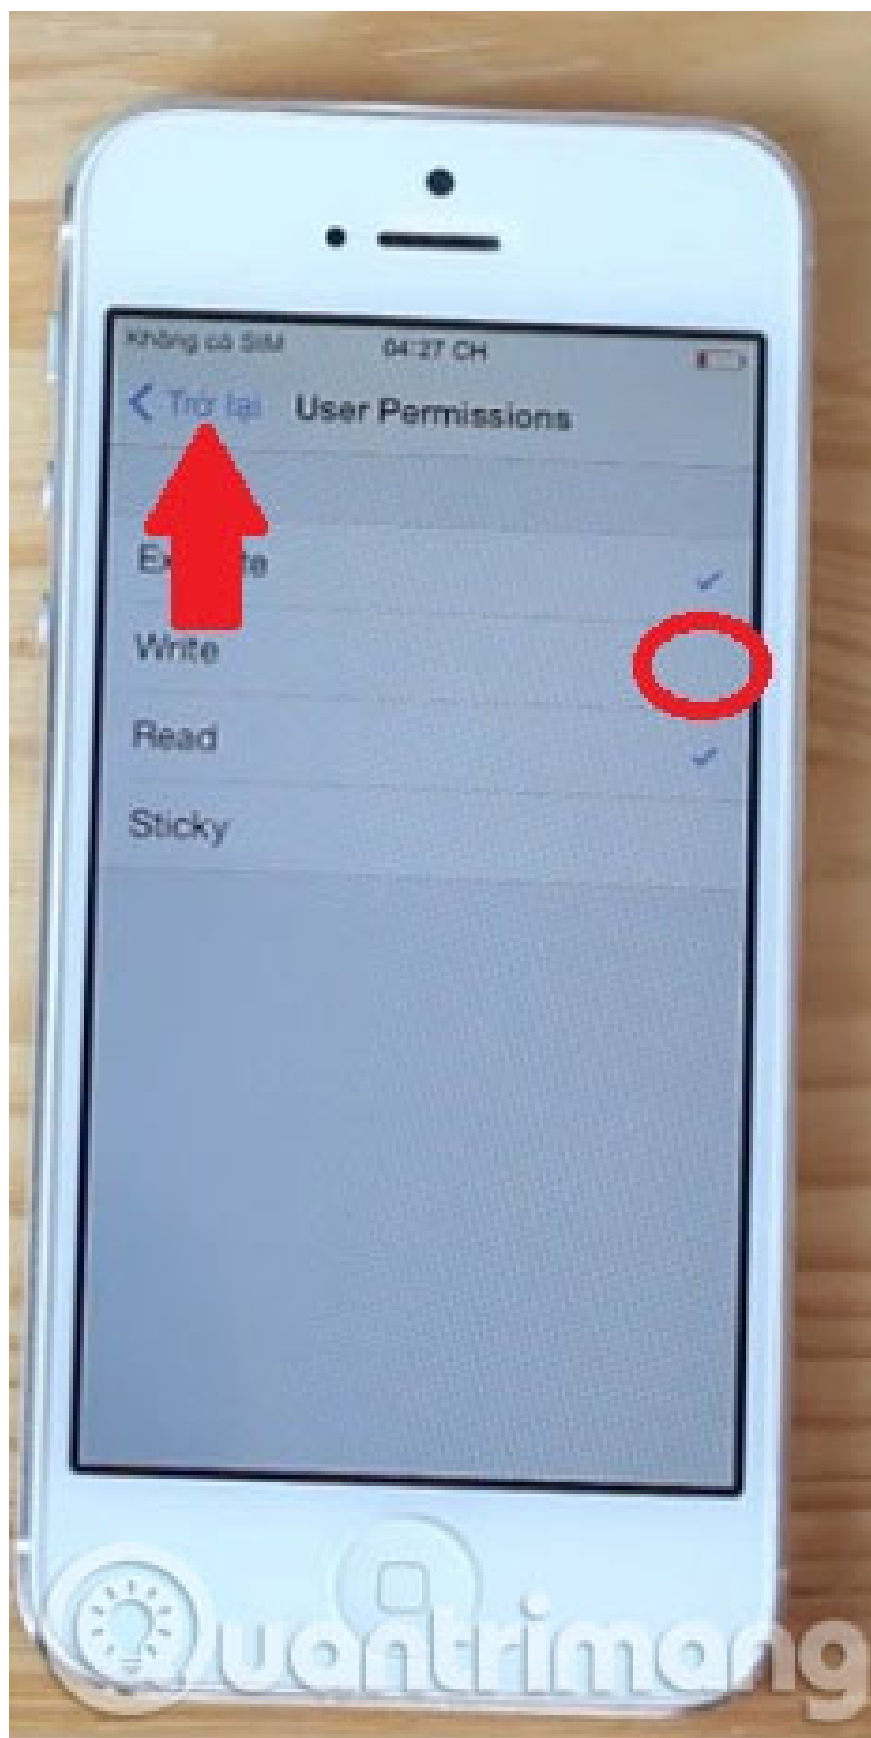

**Step 3** : In the etc section, delete the old hosts file ( *you can save a copy to another location if you want* ). Then copy the **hosts file** to replace it. Next, click the "i" next to it.

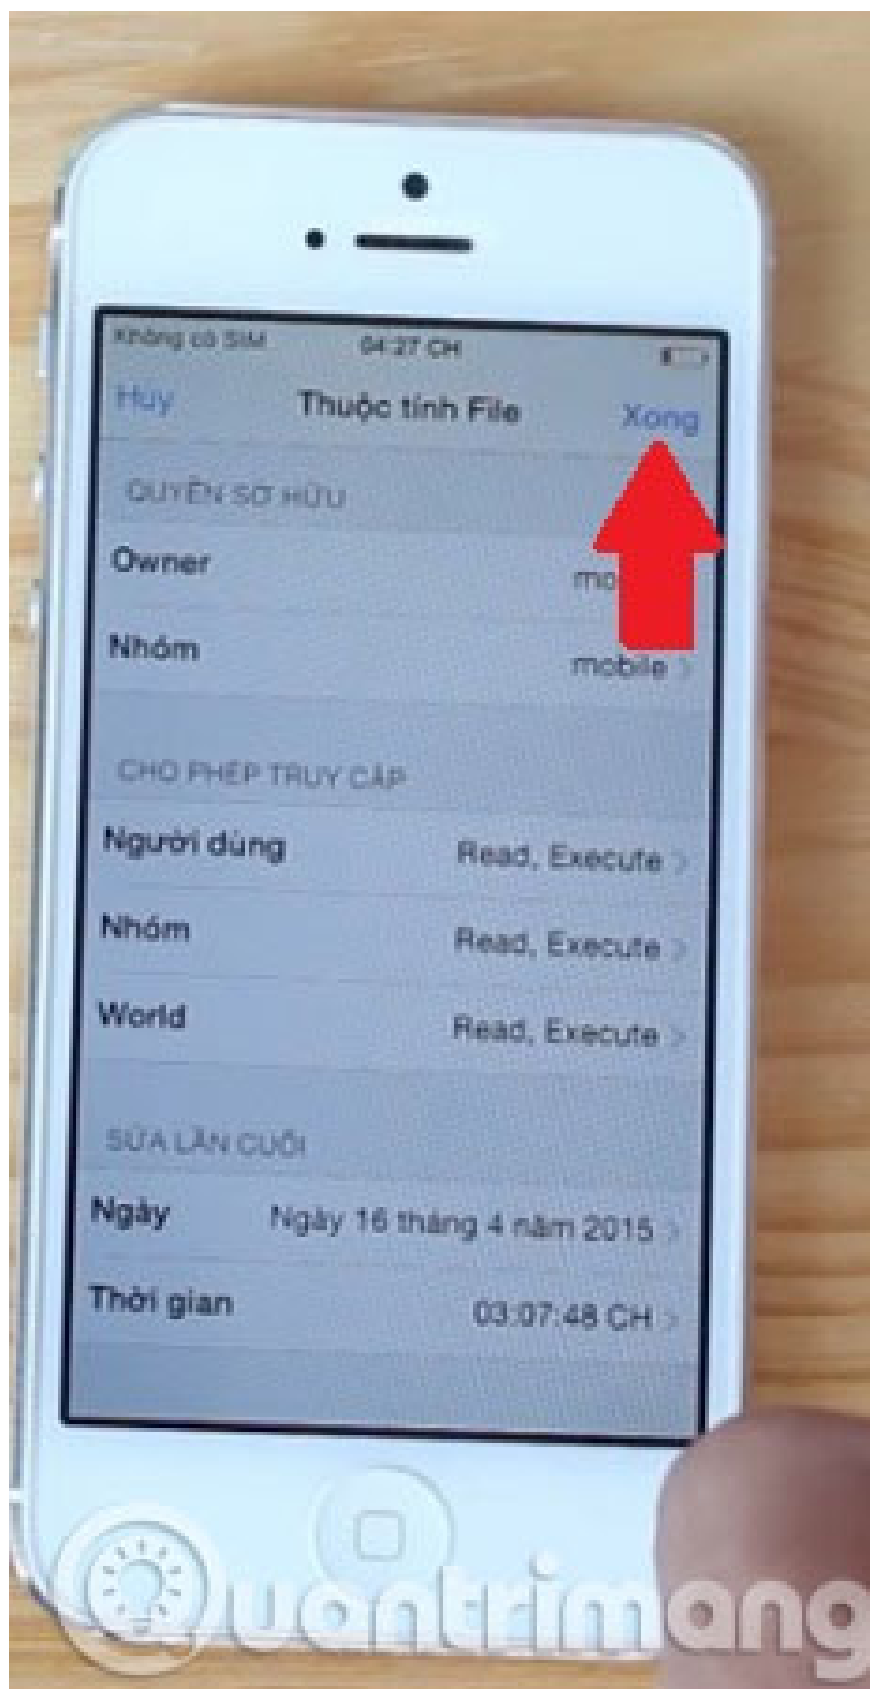

**Step 4 :** Go to **User** ( *English interface is User* ).

**Step 5** : Unmark the **Write** and then click **Back** , finally click **Done** .

### Having fun!
