

How to Log Into the Microsoft Store

The Microsoft Store is an online marketplace where you can buy everything Microsoft and more. If you have Windows 10, you have the Microsoft Store app that you can use to get other apps. You can also use a web browser on any computer to...

Method 1 of 2:

Using the Microsoft Store App

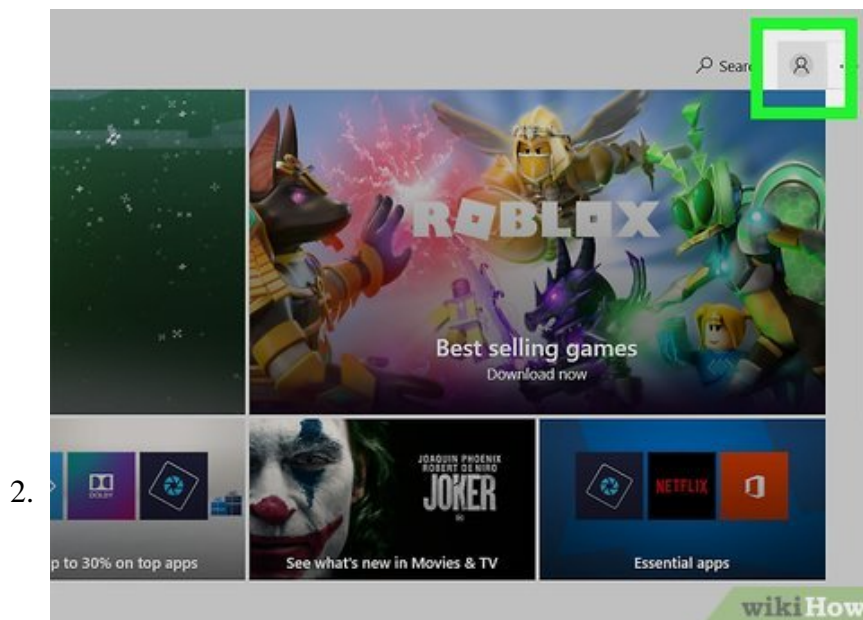

1.

Open the Microsoft Store

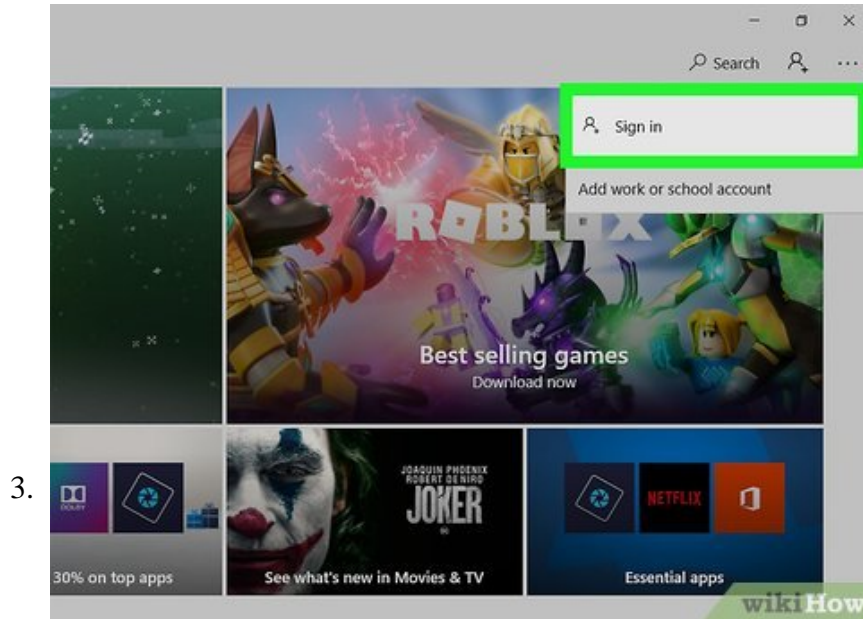

. You'll find this in your Taskbar or Start Menu tiles.

1. You'll only have the Microsoft Store desktop application if you're using Windows 10 or the Enterprise version of Windows 8.
2. You should also be automatically logged in since you entered your Microsoft password when you started your computer. However, if you're using a guest account or aren't logged into the correct profile, continue with this method.

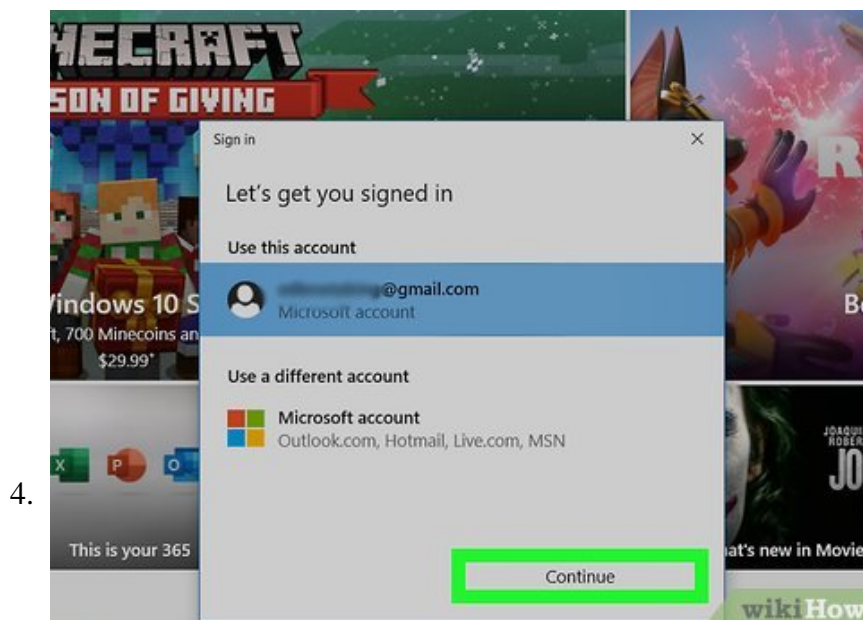

Click the profile icon at the top-right corner. The profile you're currently using, if any, should appear in a drop-down menu. If you're not logged in, you'll see an icon that looks like the outline of a person.

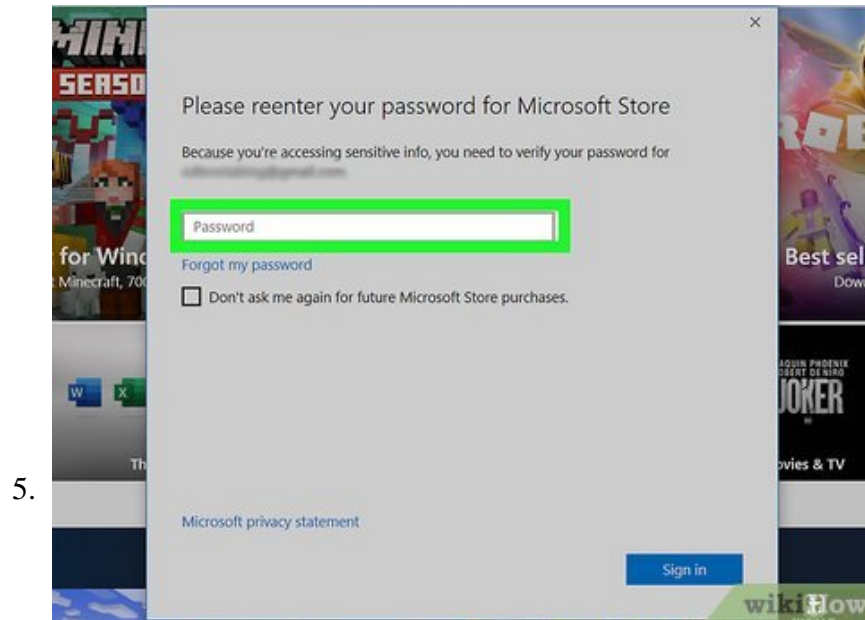

Click **Sign in** or the profile name. A sign-in window will pop-up if you're not currently signed into an account. If you click on a profile that's already signed in, you'll get a window pop-up with that account info and a **Sign out** button.

1. If you're signed into an account you don't want to use, click **Sign Out** from this window.

Select an account and click **Continue**. You'll be able to sign in with a different account other than the ones associated with the PC you're using by clicking **Microsoft account** under the header, "Use a different account."

1. Click **Continue** to proceed.

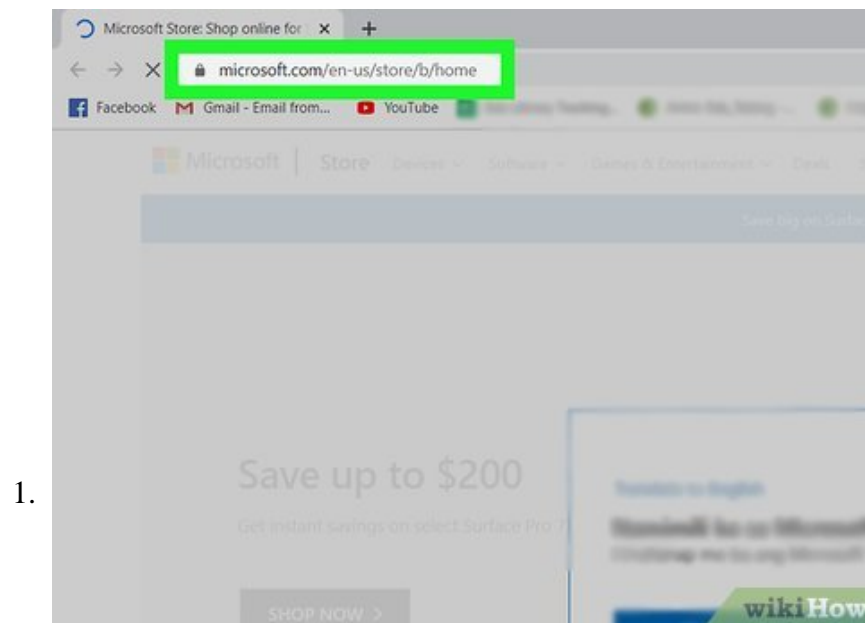

Enter the account information. If you picked an account that's associated with the computer, you only need to enter the password. If you choose to use a different Microsoft account, you'll need to enter the email, phone, or Skype information and then enter the password.

1. Once you enter that information successfully, you'll be redirected to the homepage of the Microsoft Store.

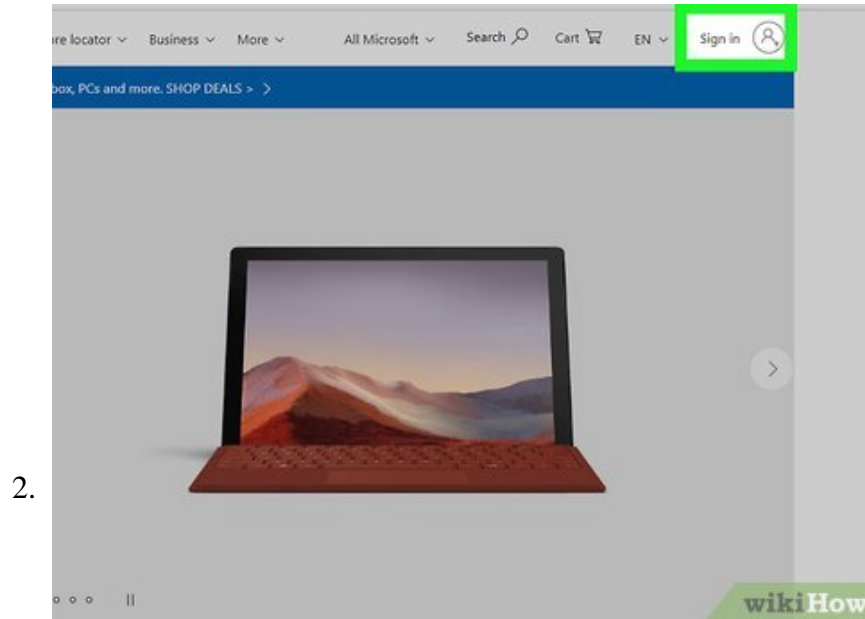

Method 2 of 2:

Using a Browser

Go to <https://www.microsoft.com/en-us/store/>. You can access this site from a Mac, but you won't be able to download and install anything unless you're using Windows.

1. You can also use a mobile web browser to log in to the Microsoft Store, but you will run into errors when you try to download anything.

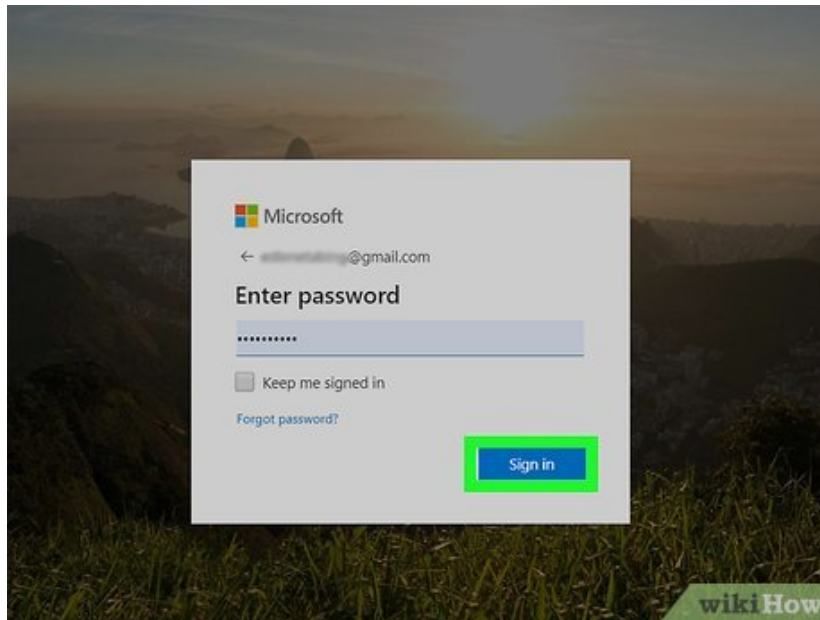

Click the profile icon in the top right corner of the page. This looks like an outline of a person inside a circle. You'll be redirected to a login page.

Enter your email, phone, or Skype to sign in with Microsoft. You can also click **Create one** to create a free Microsoft account if you don't have one.

1. If you forgot your login info, you can click **Sign-in options** to change how you can sign in or request your username. You can also sign in with Windows Hello or a security key if you click the second option in blue that says "Sign in with a security key", which requires previous set up.^[1]
2. Click **Next** to continue.

4.

Enter your account password and click [Sign In](#). If you can't remember this, you can click **Forgot password** to reset it. Again, you can use Windows Hello or a security key if you have it set up.^[2]
