How to log out of Zalo account remotely

The remote logout feature allows you to view a list of all devices that have logged into your Zalo account, from phones, tablets to laptops. This helps you easily identify and control the devices that are accessing your account, thereby promptly detecting and preventing unusual access.

For example, if you accidentally log in to Zalo on a friend's computer and forget to log out, or lose your phone, you can completely use the remote logout feature to log out of your account from that device, ensuring that personal information is not disclosed.

First, update the Zalo application on your phone to the latest version via Google Play or App Store. Next, users just need to open the application, go to Personal - Account and security.
