

How to look around in the iPhone Map application

The iPhone Maps app has the option of viewing a city image with the help of 3D Touch.

The new iOS 13 Maps app adds the Look Around feature in the map, Create a map collection or Share time to ETA estimates. In which, the Look around map feature will provide more detailed and realistic information about the cities that users search, beaches, parks or buildings. Accordingly users will use binoculars to see around the area in the city. The detailed image for that location is displayed at the top of the interface with the most realistic image. The following article will guide you how to use the look-around feature in iPhone Map.

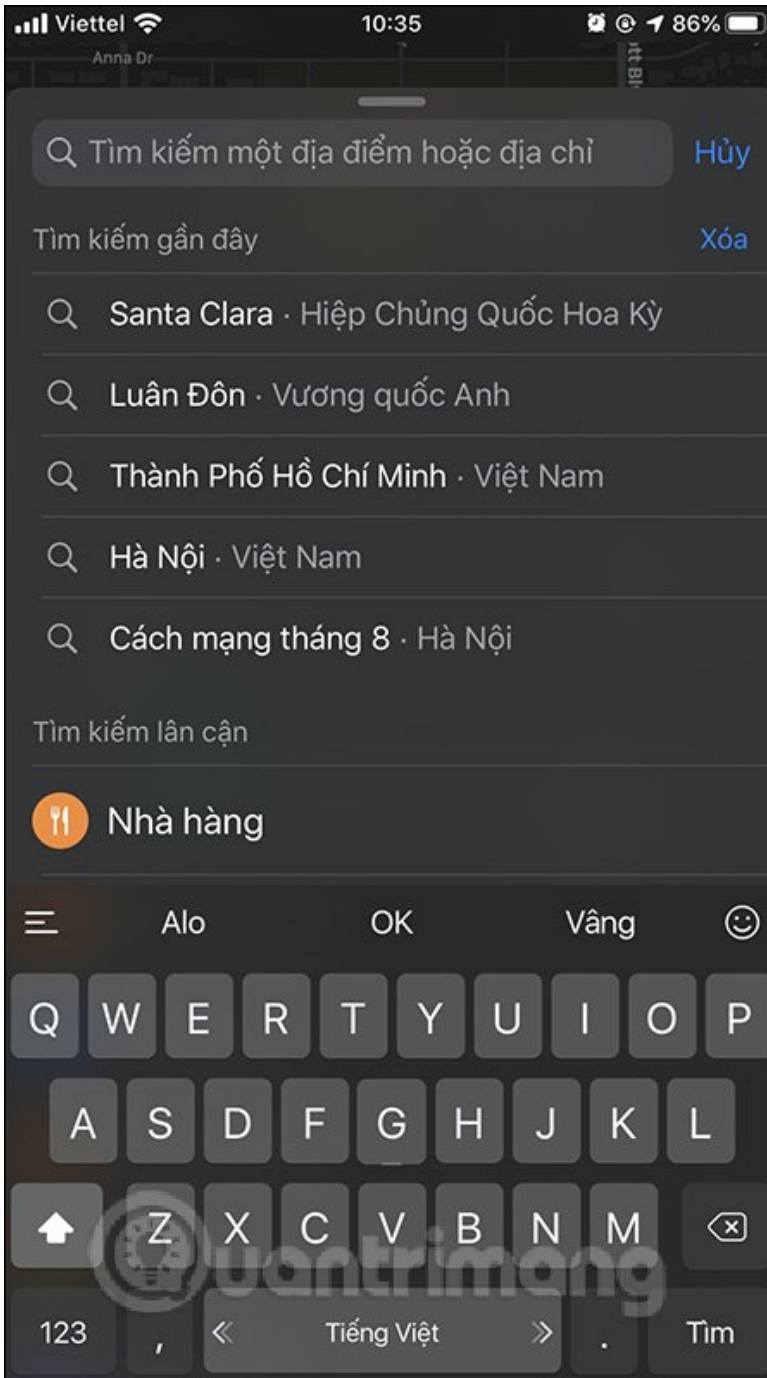

1. Great tips on iOS 13 you may not know
2. Common problems on iOS 13 and how to fix them
3. How to use Apple Maps right in the browser
4. How to use Voice Control in iOS 13

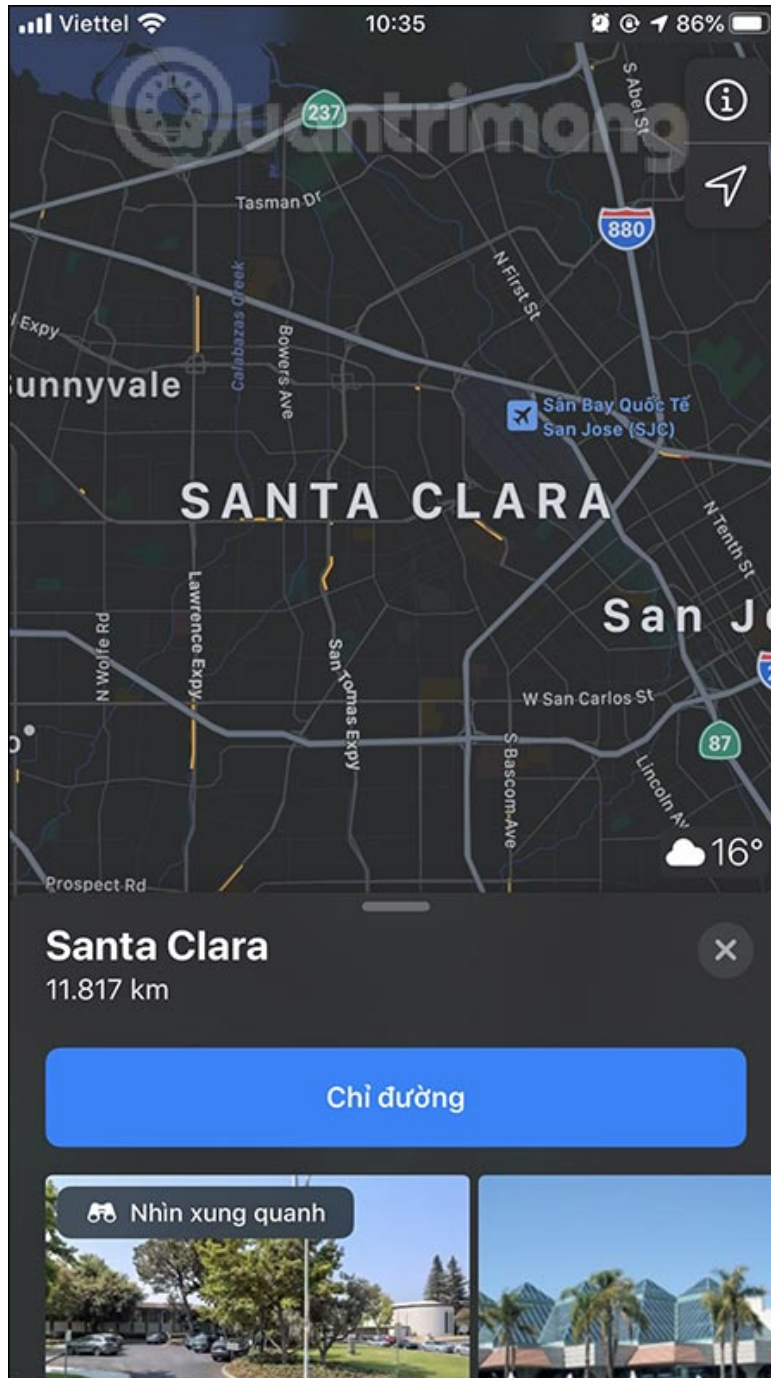

How to look around the map in iPhone

Video tutorial looking around the iPhone map

Step 1:

We access the Maps application on the iPhone and **enter the search city** . Currently, the new look-around feature only applies to US cities. Out city results to search, click to access. We will then see the Look Around feature below.

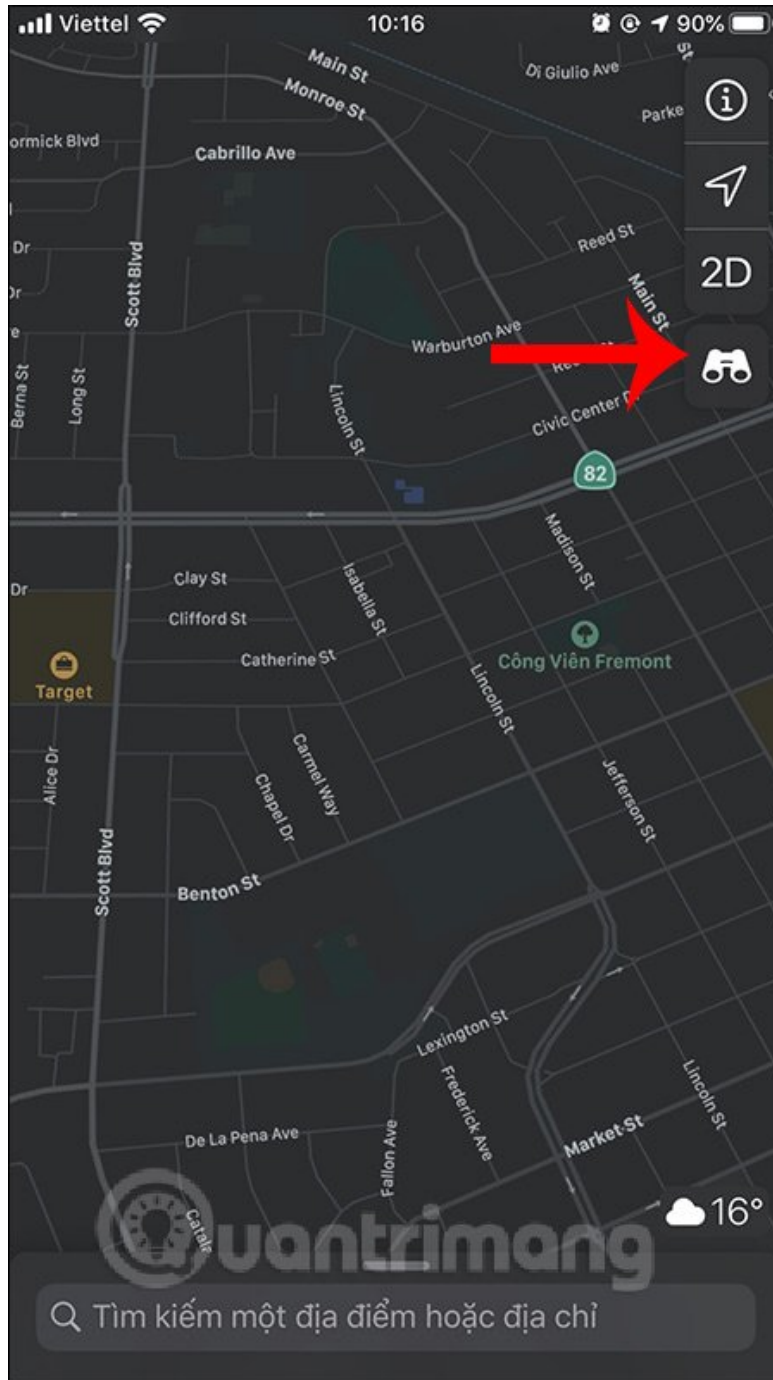

Step 2:

The user **enlarges the map** and displays the adjustment toolbar on the right side of the screen. Click **the binoculars icon** to look around the map. Then in the center of the map will display a group tube icon for you to move and see places in the city. We move left or right to move

Go to any location at the top will show the real image of that location. Very detailed images from the road to the house.

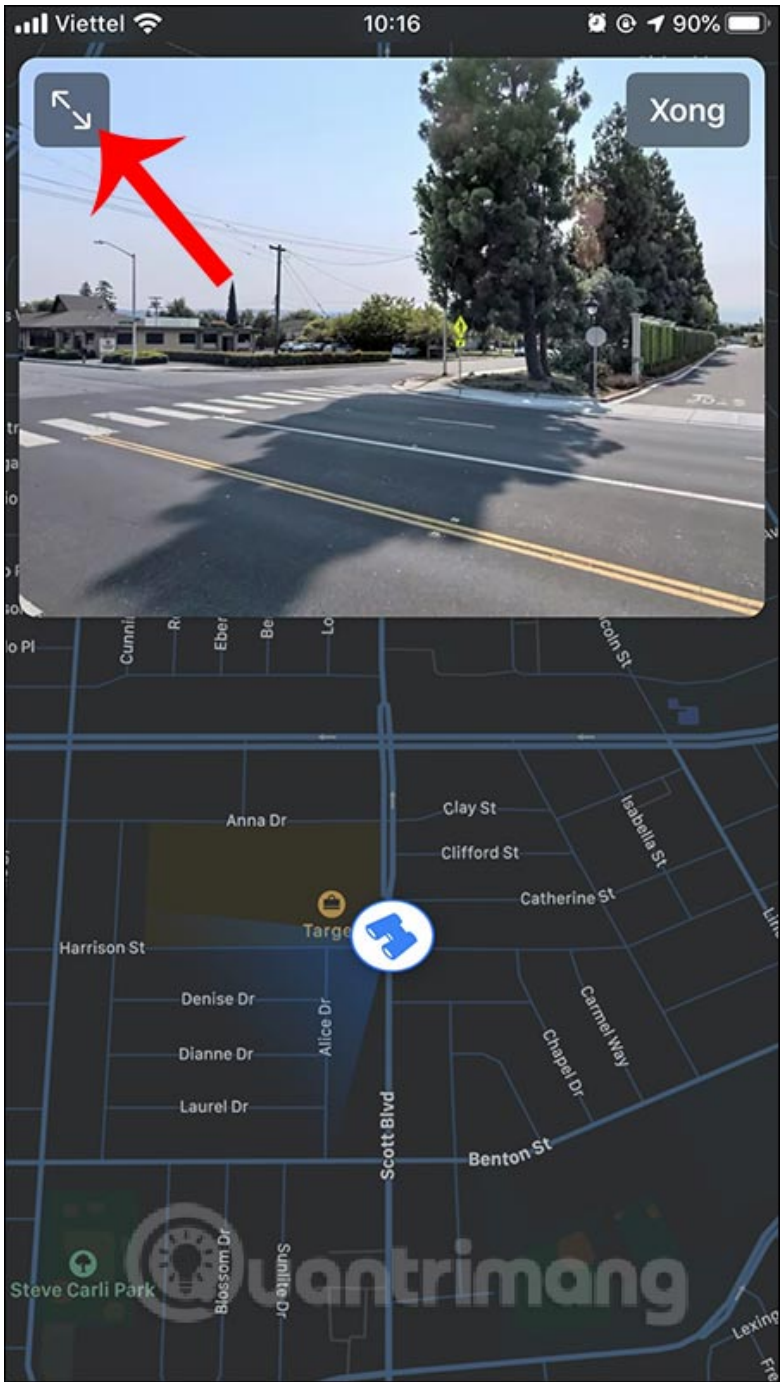

Step 3:

When **clicking on the image shown above** , we will be moved to the front of that location. If you want to **zoom in or out**, then open or pinch 2 fingers. There are also **icons to enlarge or reduce** the image to switch the full screen view.

In full screen view there is also a compass to move the direction. To return to the main screen, press the word Done in the right corner.

With the new Look Around feature on the Maps application of iOS 13, users can view details of any location in the city you are looking for. The images are most realistic shots, can be moved around thanks to 3D Touch.

I wish you successful implementation!
