

How to make clouds effect for still images

Cloudy effect, snow falling on still images has attracted many people who love image editing. You can create that effect by using Fused app for iOS device

The timelapse effect in photography can be understood as a fast-forward time technique, which helps the viewer to see very slow movements such as blooming flowers, floating clouds, falling snow, bringing a more attractive look to the image. image.

And if you love the timelapse effect, you can use the Fused app installed on iOS devices, which helps create still images with the effect of floating clouds, snow very beautiful. You will not need any professional photography device, just install the application and then merge the cloudy video that is uploaded on Youtube to a still image. Along with Network Administrator embark on creating still images with cloud effect with Fused application in the article below.

1. Prepare application to combine drifting cloud effect:

In order to be able to create static images of cloudy effect, you need to prepare the applications:

1. Download the Fused app for iOS.
2. Download Video Surfer application download video Youtube.
3. Download the image with a wide sky view to insert the cloudy effect.

2. How to create a cloud effect effect:

After downloading the applications and images needed to merge them, we proceed with the steps below.

Step 1:

First of all, download the cloudy video on Youtube to merge it into the photo using the Video Surfer application.

We open **the Video Surfer application** on the device and then click on **the Youtube item** as shown below. At the interface on Youtube, click on **the magnifying glass icon** , then type the **keyword cloud time lapse 4k** . Soon, we will see the clouds flying videos.

Maybe later, let's get started!

Step 5:

In the video editing interface on Fused. Users can customize the frame for video, set the default to Original mode or select **Square** square frame. Click **traces** to save.

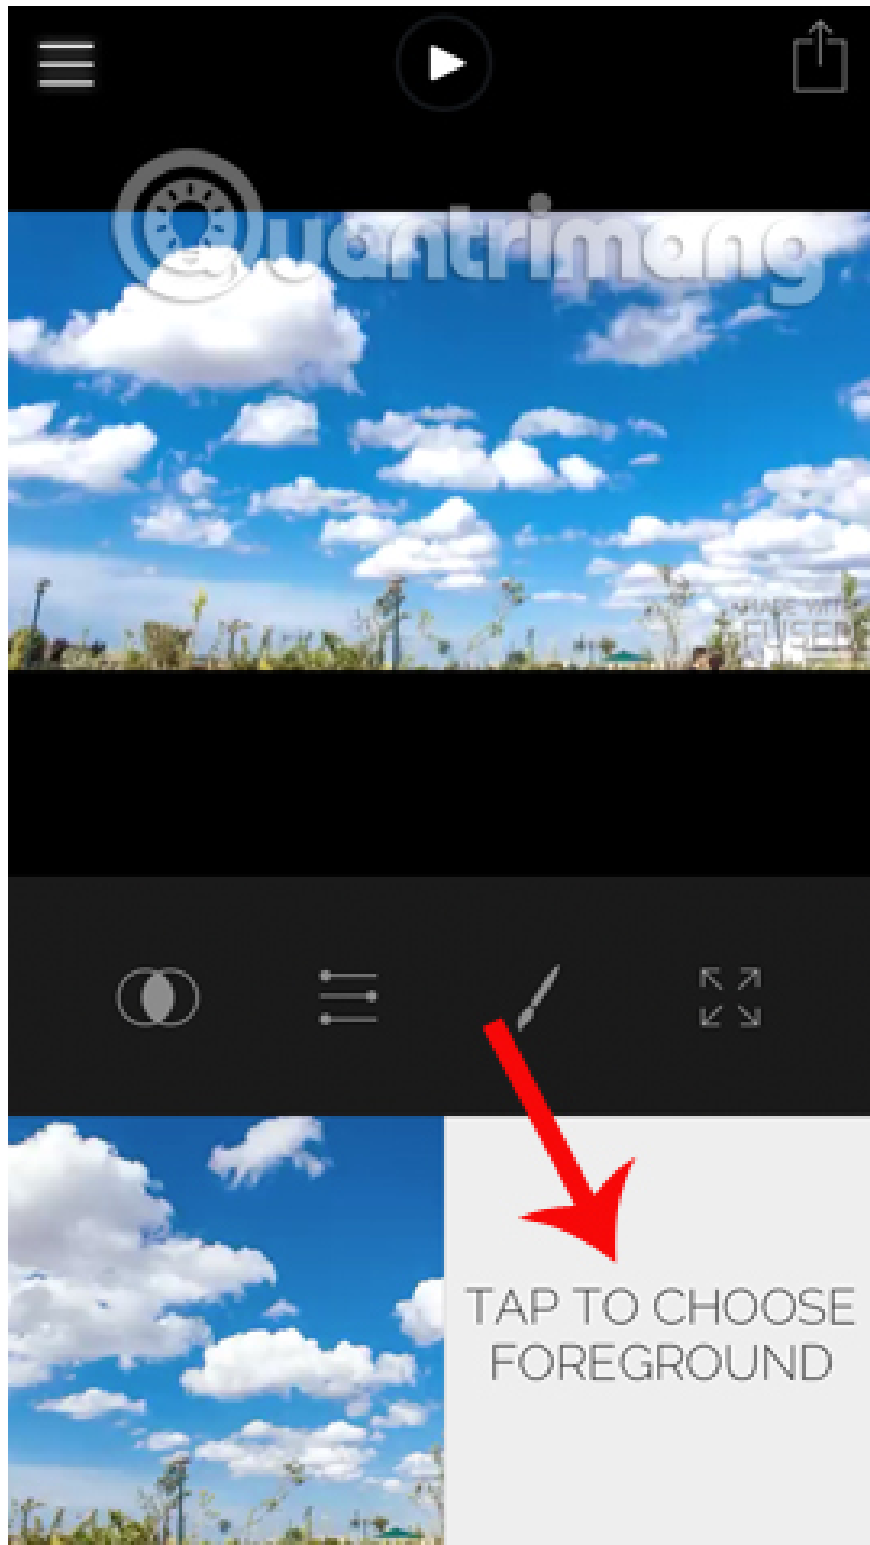

A little tip to you , if the image you use is about the same size as the frame, we switch the video frame to Square mode. Conversely, if the image is horizontal, then select the **Original** mode for the video.

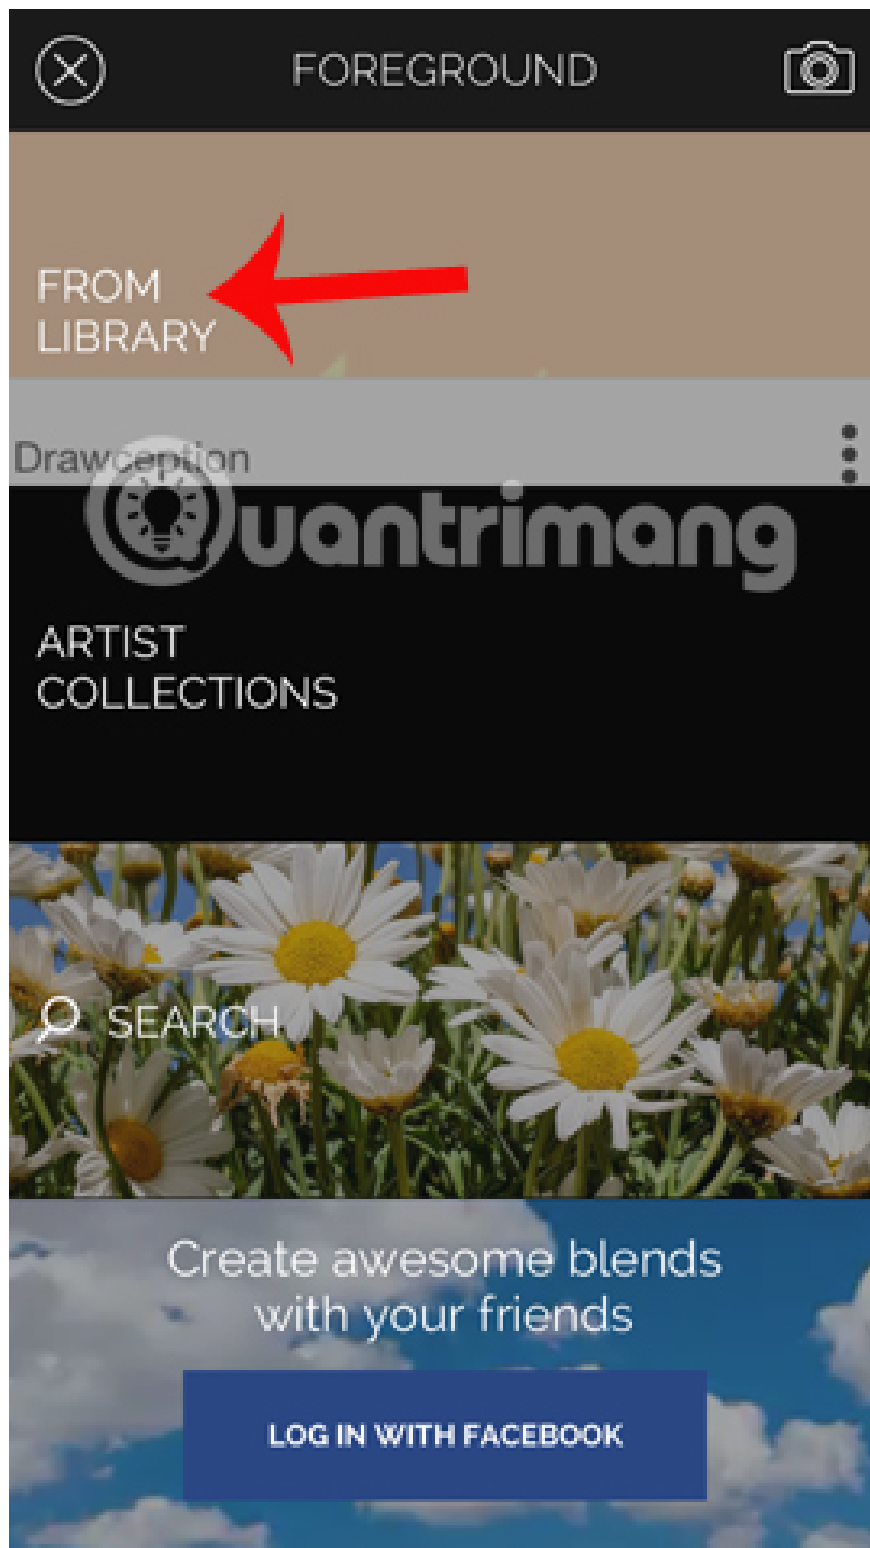

Step 6:

Then, click on the **Tab to choose foreground line** and then click **From Library** . Select the image you want to use in the gallery on the device.

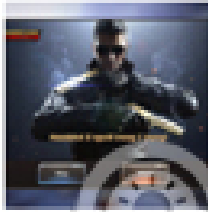

TAP TO CHOOSE

Step 7:

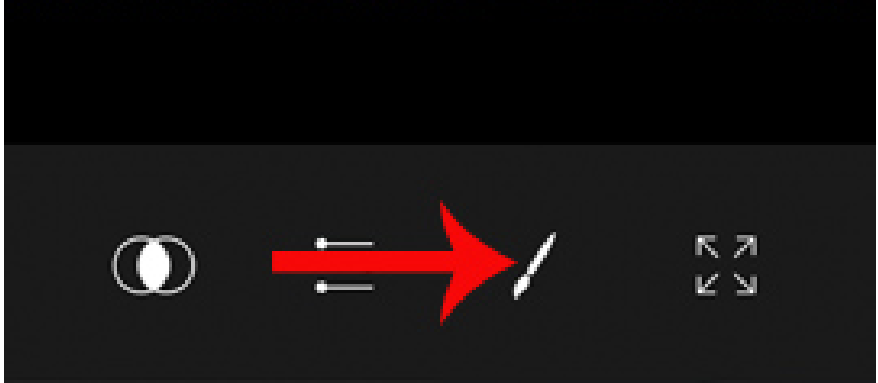

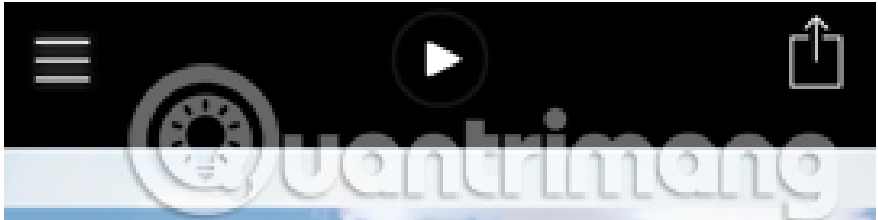

Now we will **reverse the position of the background image and the cloud video by dragging from right to left** , and the interface is shown below.

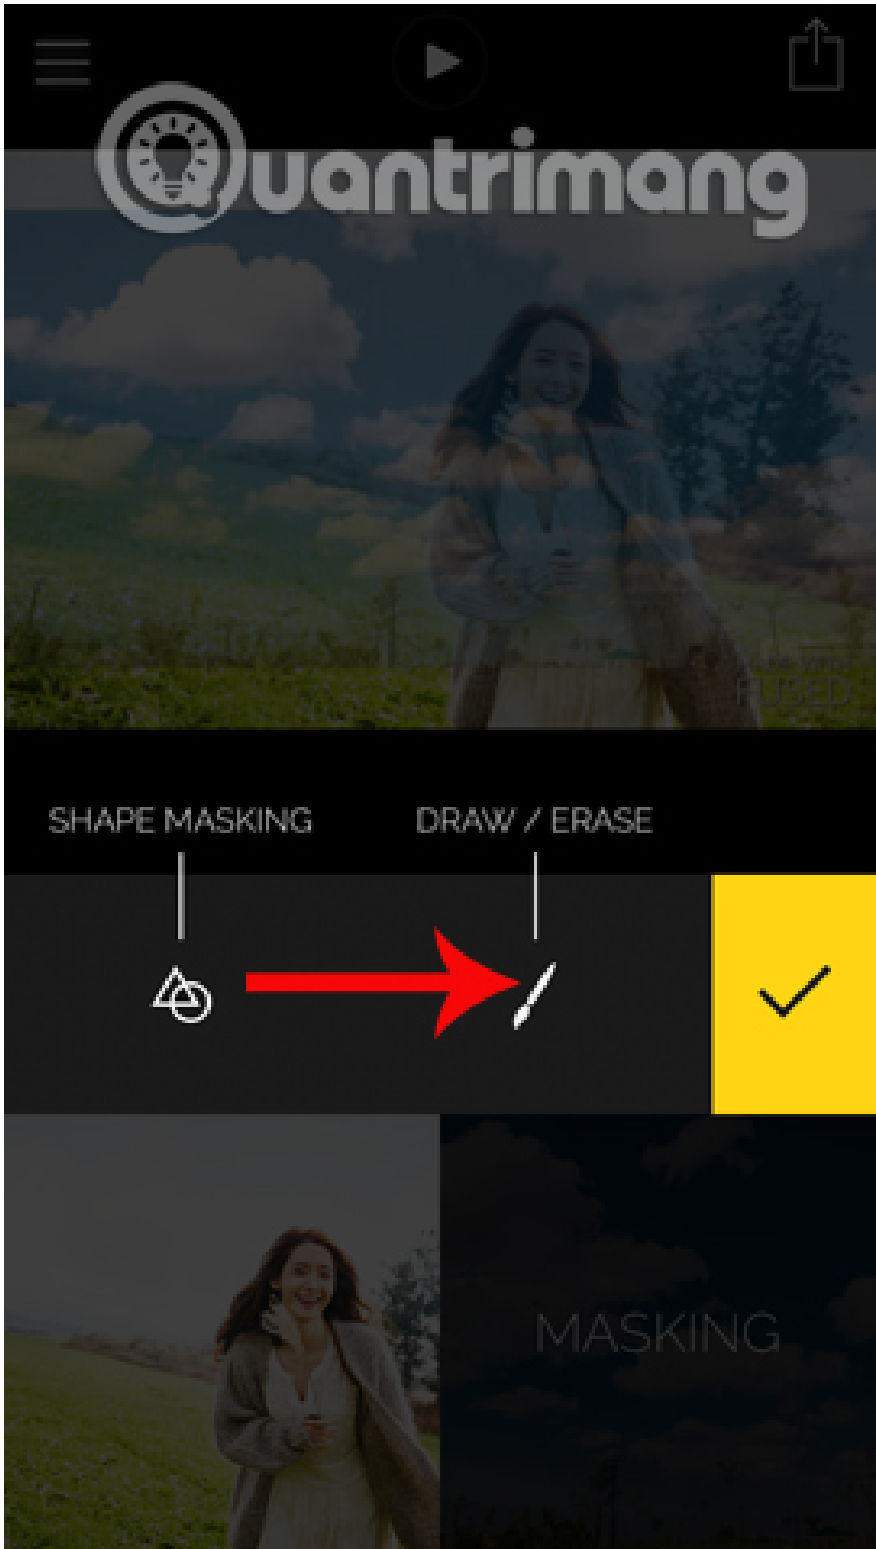

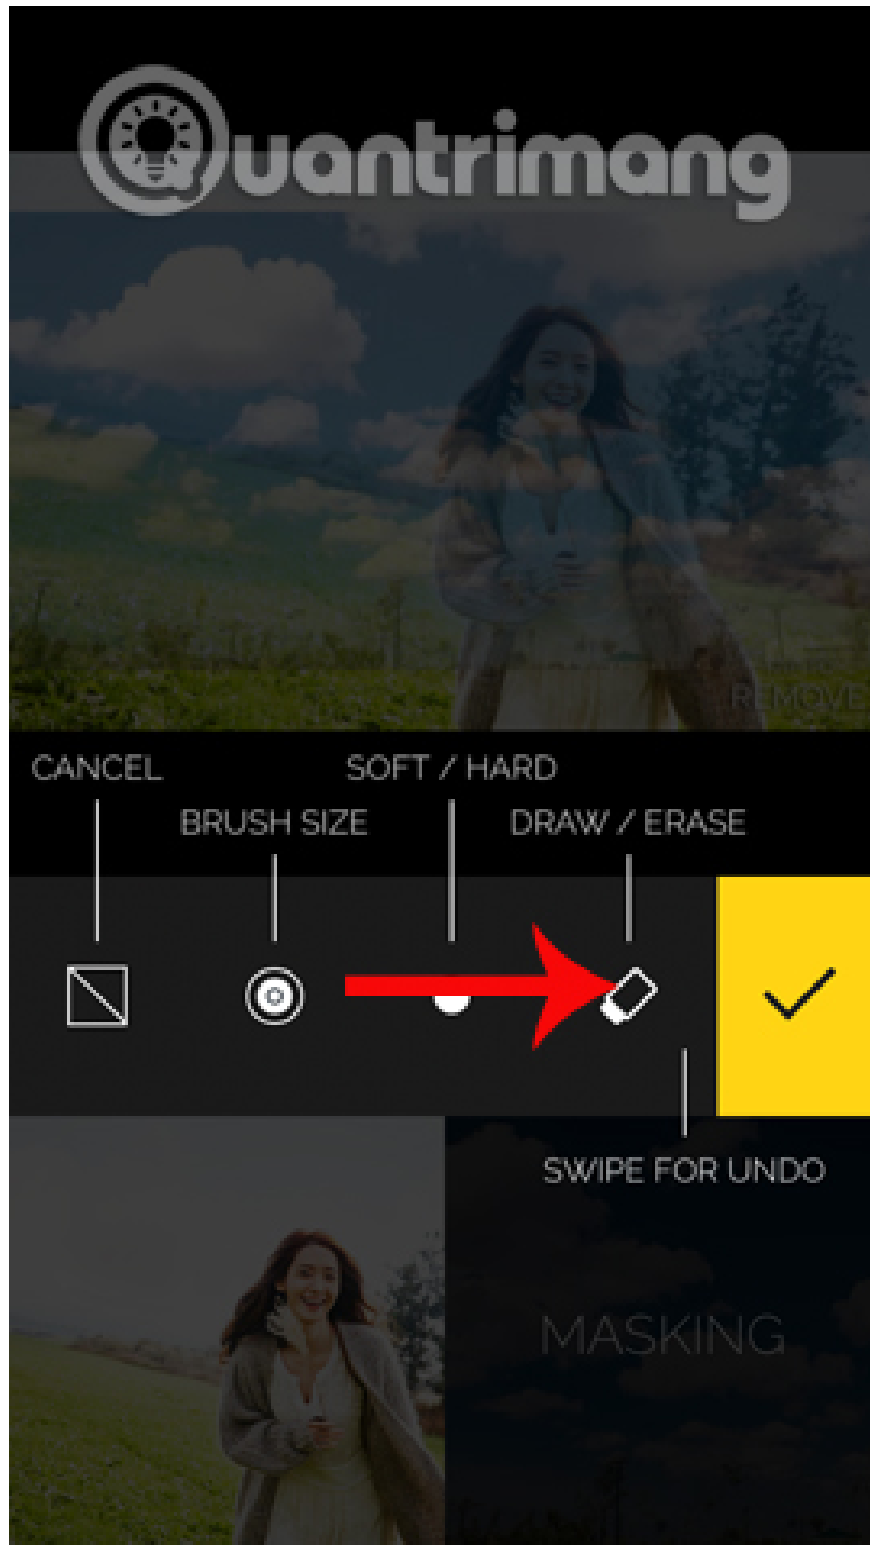

Step 8:

Next, to edit the image, users click on **the pen icon** . Select **the pen shape** and select **the eraser image** .

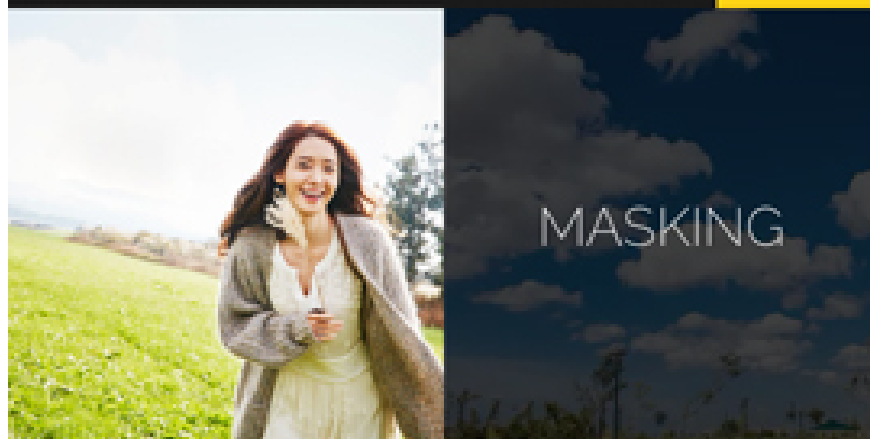

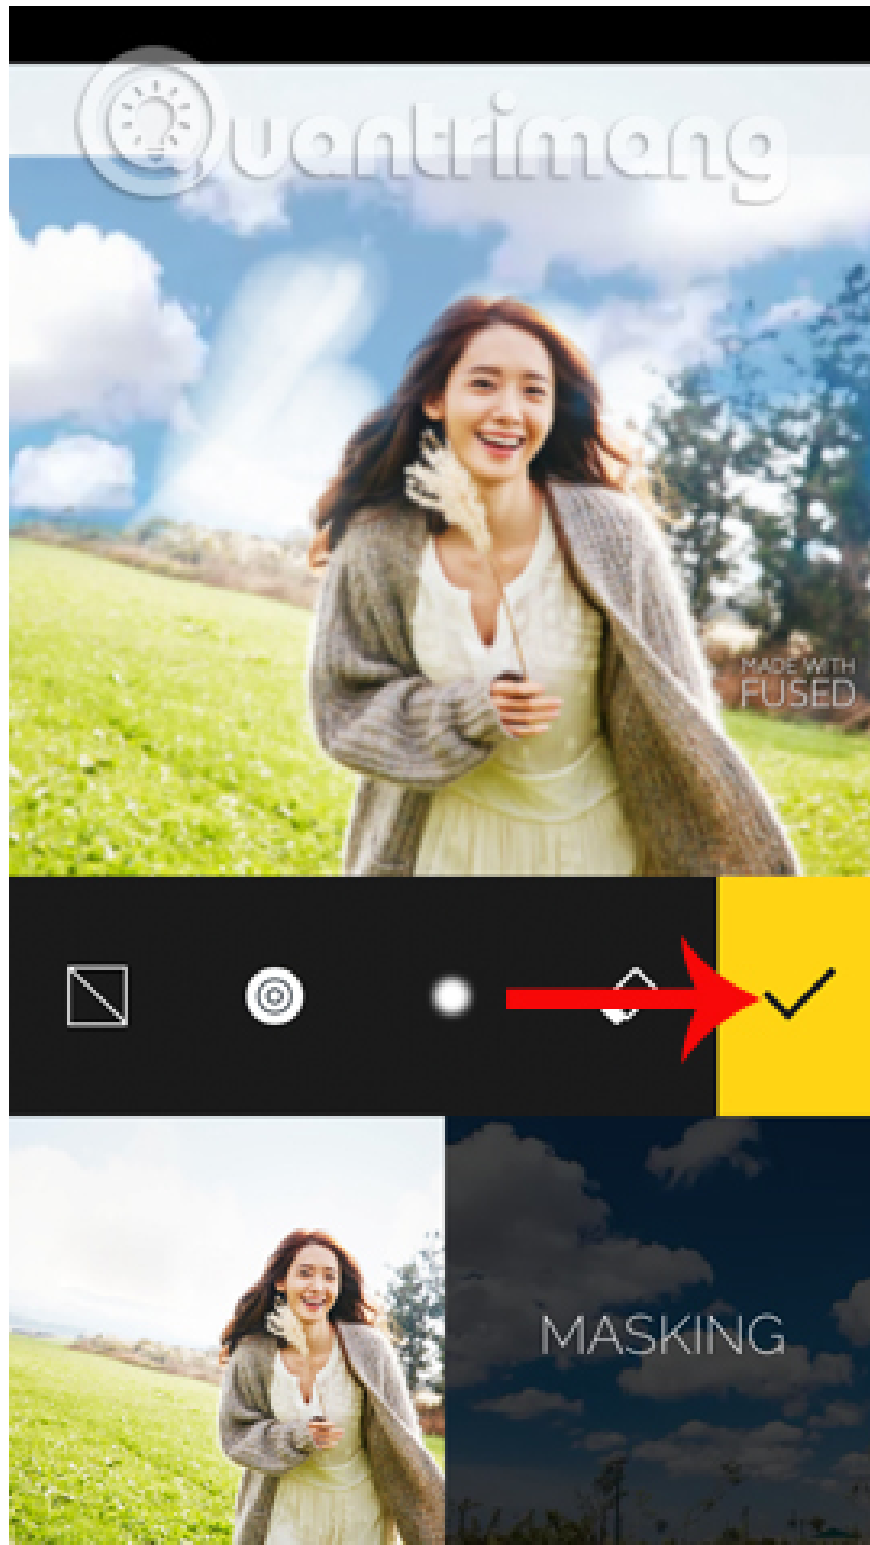

Step 9:

In this step, users will **delete unnecessary scenes** for images. Thoroughly scrutinize the parts that obscure the image and subtract the gaps to show the moving cloud. After deleting, press the **tick** to save the edit.
