PhotoScape is a software that integrates various photo editing features to meet basic needs such as adjusting contrast brightness, viewing photos, cropping images, resizing, creating animations . In content The following article, we will guide you how to make animated photos on PhotoScape.

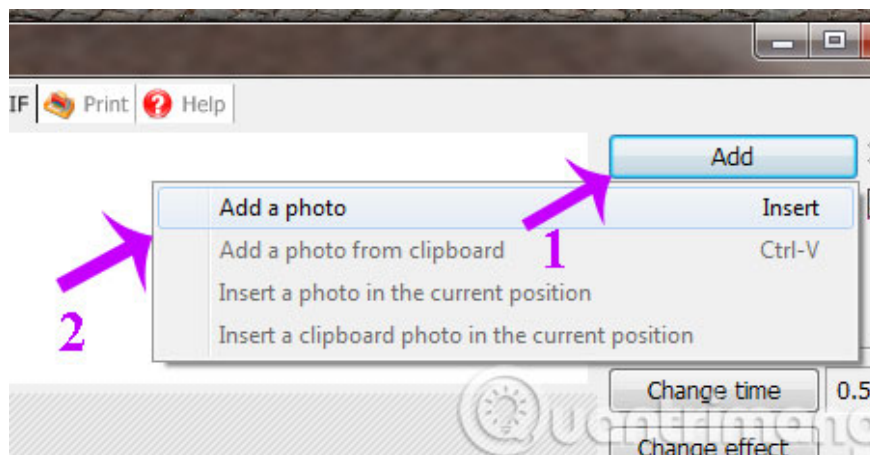

1. Basic steps for making GIF images from video files
2. Tutorial for creating animations in Photoshop CS6

Note : You should use square images to make animations

Step 1 : At the main interface of PhotoScape, select the **Animation Gif** tab

Step 2 : You import photos into PhotoScape (from 2 photos or more)

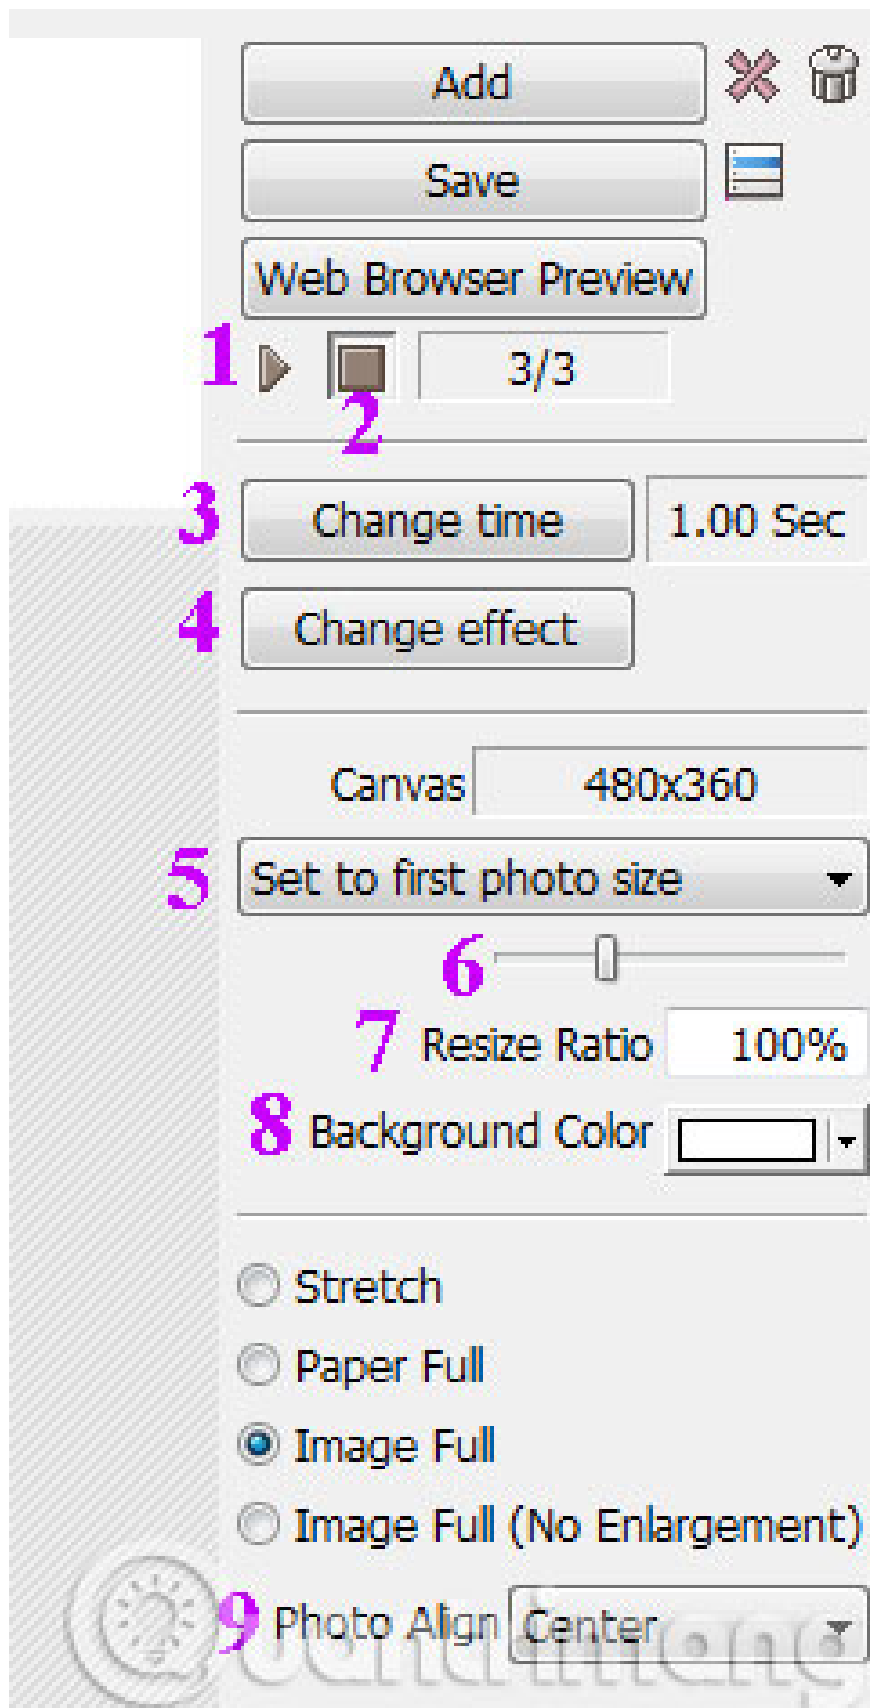

▶ (1) 1.00 Sec ▶ (2) 1.00 Sec ▶ (3) 1.00 Sec

Step 3 : You will customize the animation effect

1- **Play** button (a pointed triangle facing to the right): Run image transfer mode.

2- **Stop** button (square shape): Stop image transfer mode.

3- **Change time** : Change the image transfer time. For every 100 units it is 1 second.

4- **Change effect** : Photo transfer effect:

1. **No Effect** : No effect
2. **Slide up** : The next image will run from the bottom up instead of the previous image.
3. **Slide down** : The next image will run from the top down instead of the previous image.
4. **Slide to the left** : The next image will run from right over instead of the previous image.
5. **Slide to the right** : The next image will run from the left to replace the previous image.
6. **Convert to Background Color** : The previous image gradually changes to the background color, then the background color gradually changes to the next image (the background color is mentioned below).
7. **Convert to Black** : The previous image gradually changes to black, then from black gradually changes to the next image.
8. **Convert to White** : The previous image gradually changes to white and then from white to the next image.

5- **Optional image size** .

1. **Set to first photo size** : Take the **first photo size** to make the overall size for the remaining photos.
2. **Set to big photo size** : Get the largest image size as the general size for the remaining photos.
3. **Set to small photo size** : Get the smallest image size as the common size for the remaining images.
4. **Set canvas size** : Choose your desired size.

6- **Slider** : Customize image size (resize).

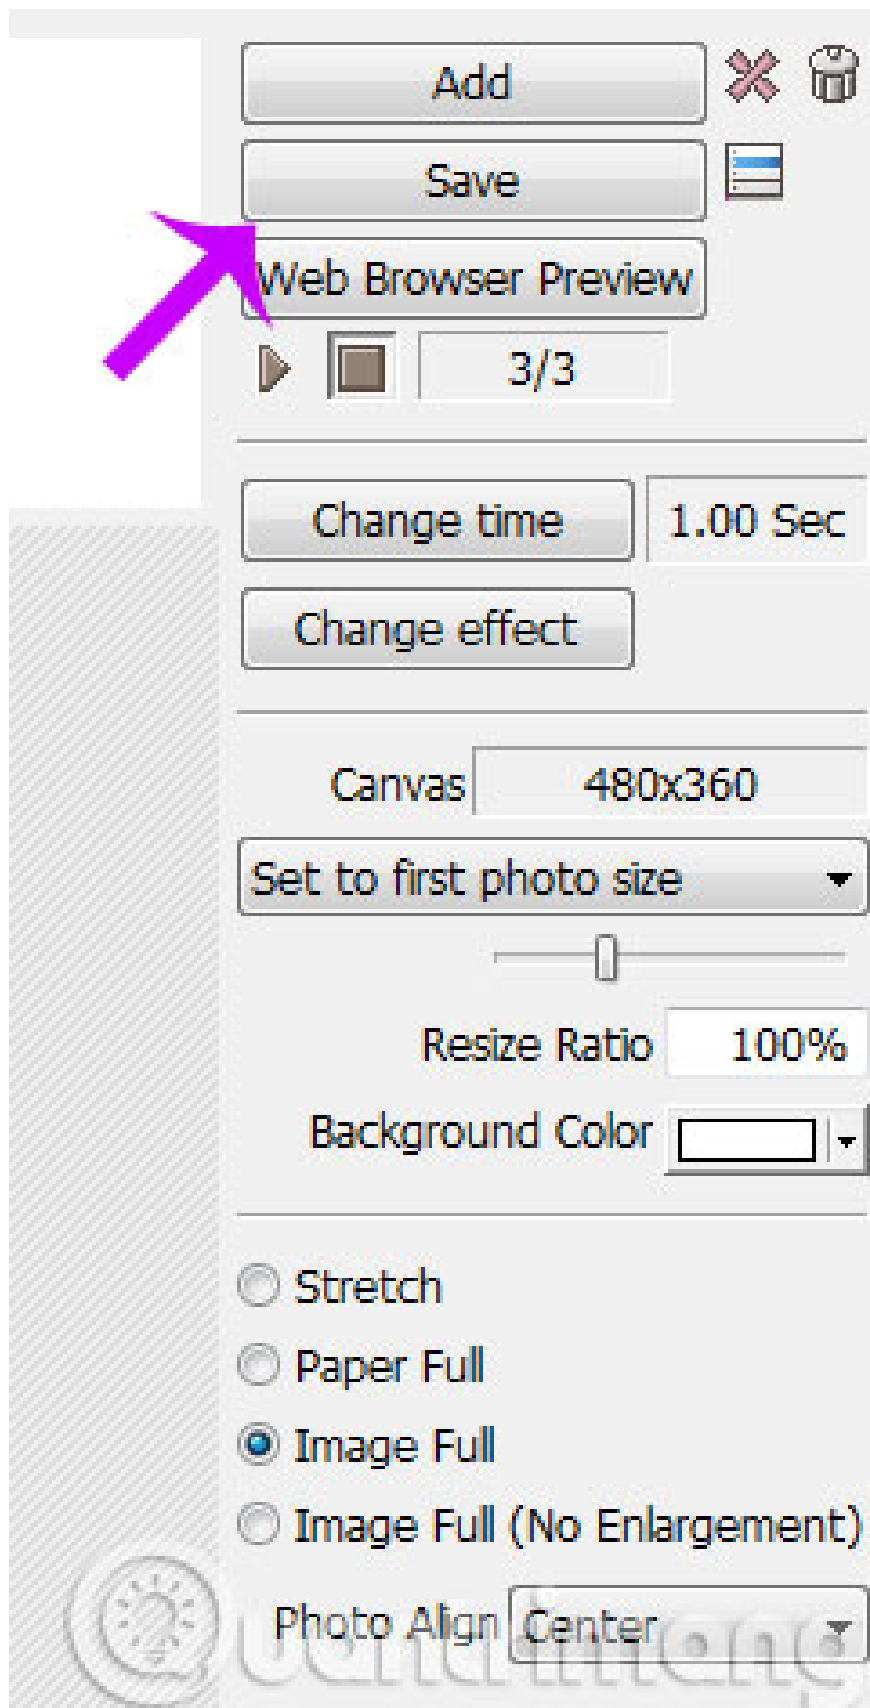

7- **Resize Ratio** : Shows the resize ratio compared to the original size.

8- **Background Color** : **Background color** option (*for Change effect above*).

1. Stretch
2. Paper Full
3. Full Image
4. Image Full (No Enlargement - No photo enlargement).

9- **Photo Align** : **Photo** position (aligned).

Step 4 : After adjusting the effect, select **Save** to save the image

And this is the result

Good luck!
