

How to manage files on iPhone with Total files

Total files supports managing iPhone storage files and files stored on cloud services.

Although there is already a File manager application available on iOS devices, the functionality is relatively limited. So many people choose to install additional file management applications on iOS to have more options. Total files is an application that manages files stored on iOS devices and all content stored in cloud services. Cloud services that Total files support are very popular such as Google Drive, Dropbox, OneDrive, .

Besides, the application also allows users to compress and decompress files, hide individual files with a password. Users can manage or download files on iPhone from the computer. In addition, Total files also have a separate browser to use and allows downloading files from that browser. The following article will guide you how to use Total files to manage files on iOS.

1. How to manage data on iPhone with Documents 5
2. How to create application folders on iPhone
3. How to manage photos on iPhone with iPhone Photo Manager
4. How to use Files Go to manage files and share data on Android

Guide Total files to manage files on iPhone

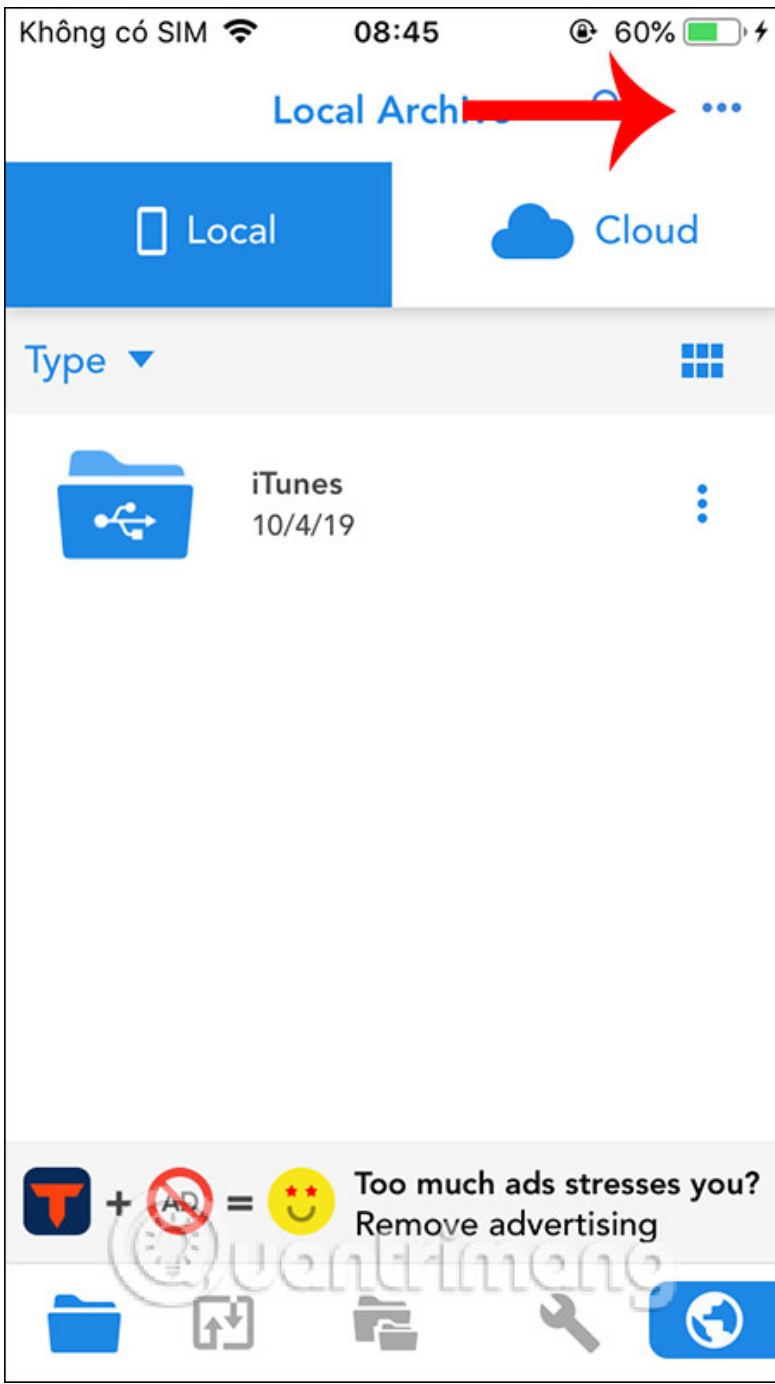

Step 1:

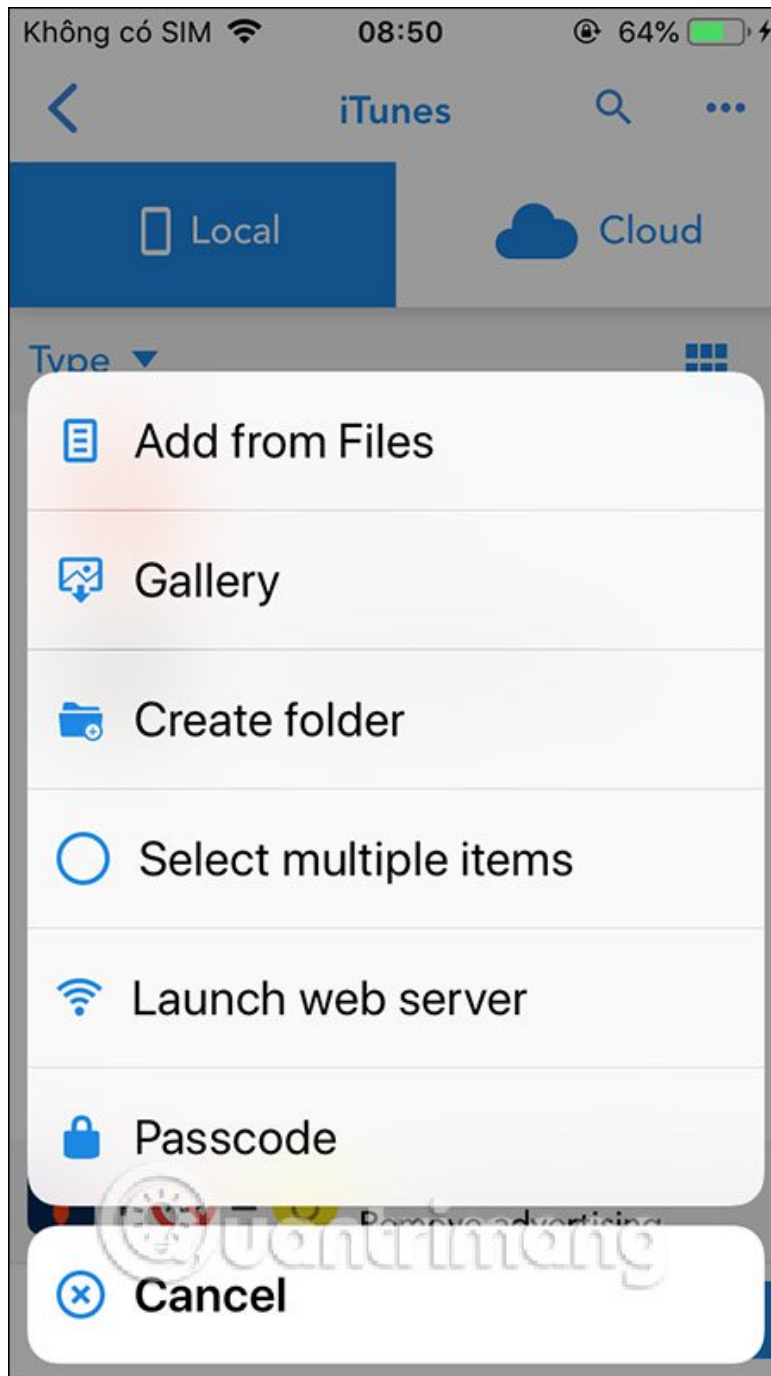

Users download the Total files application using the link below.

1. Download the Total files iOS app

Step 2:

Open the app and skip the introductory interface to get to the home screen. **Local section** to manage files in device. We click on **the 3-dot icon** to download the file into the application. Display an optional interface, click **Add from Files** to get files in the Files app, **or Gallery** to select images in the gallery.

In addition, users can create separate folders in Total files to manage files when needed.

In the Cloud section showing archived files, users can open the file, save the file, and display it in Local.

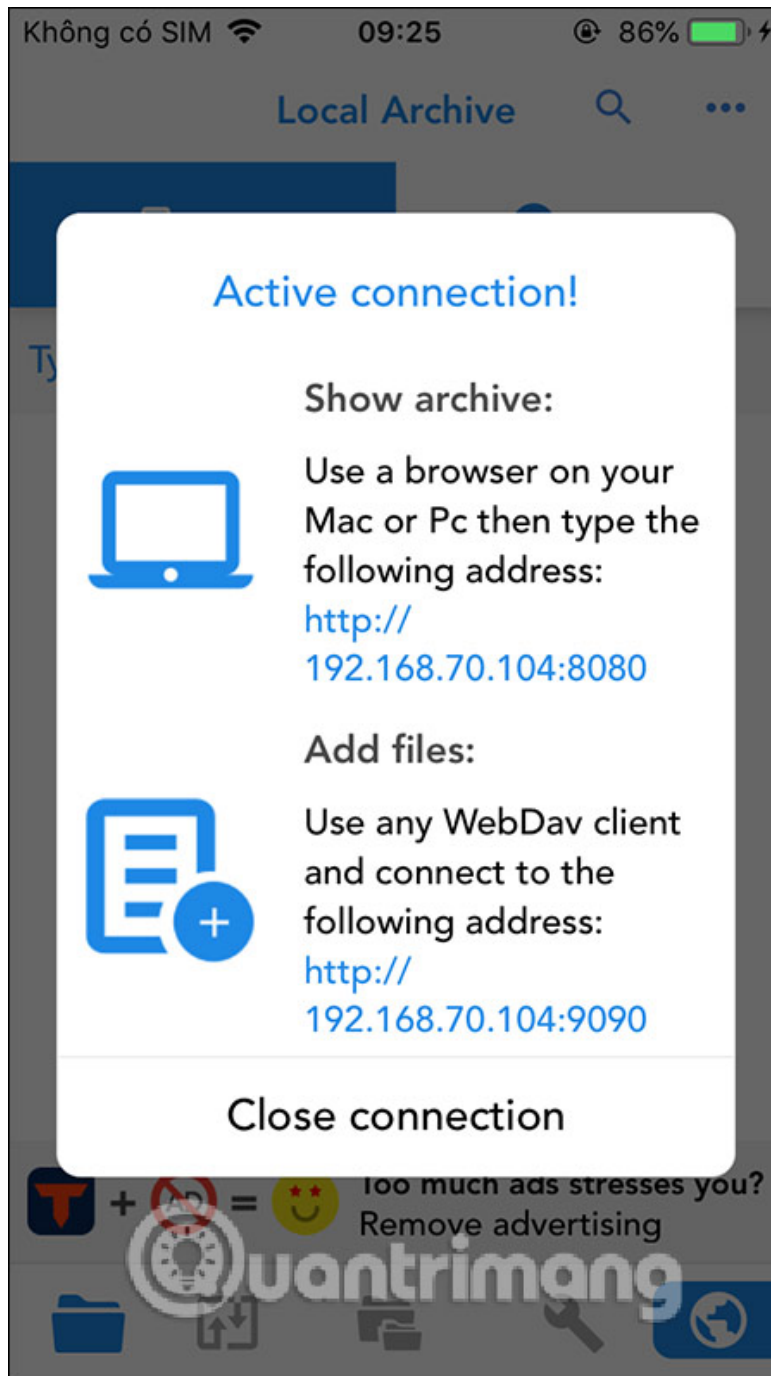

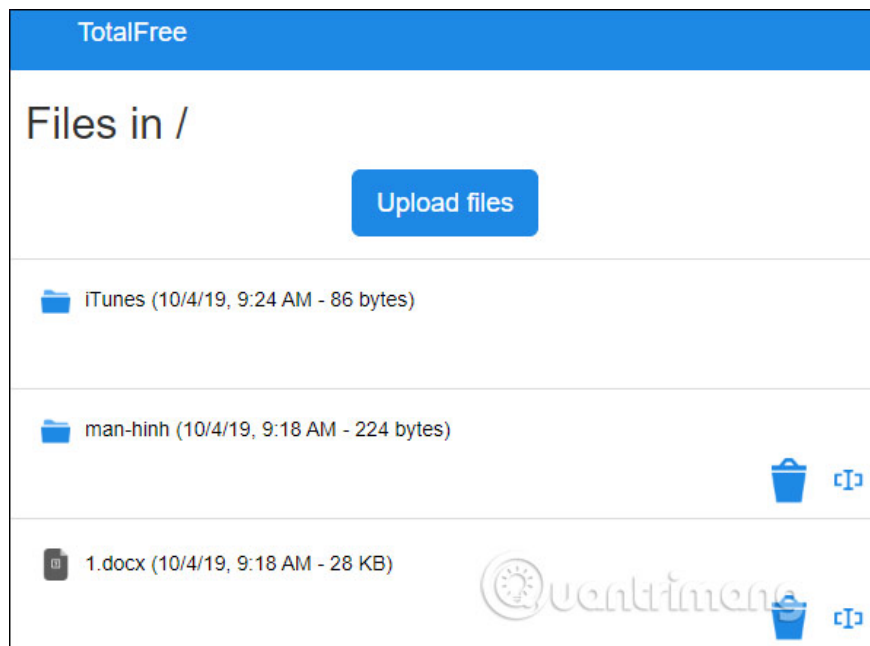

Step 5:

To **manage iPhone files on your computer** , users need to make sure they **share a WiFi network** . Then click the vertical 3-dot icon on the application to **select Launch web server** . Displays the **address of the file management page** at Show archive to use.

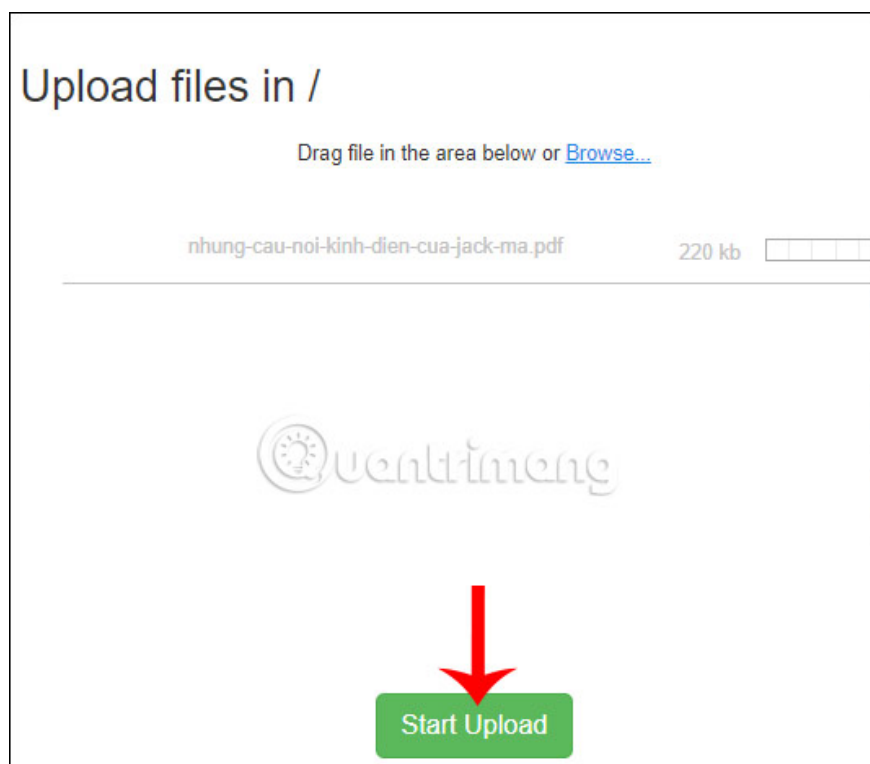

When you visit this link on the computer, you will see all the folders or files stored in the Total files application. We click on each item to view, or download with the document file.

If you want to **upload files from your computer to the Total files application**, you need to minimize the connection interface on your computer and then click **the Upload files button**. Show the interface to download the file and **click Start Upload** to download data on the iPhone. Note during the process of connecting iPhone to the computer must not turn off the Close connection interface.

Step 6:

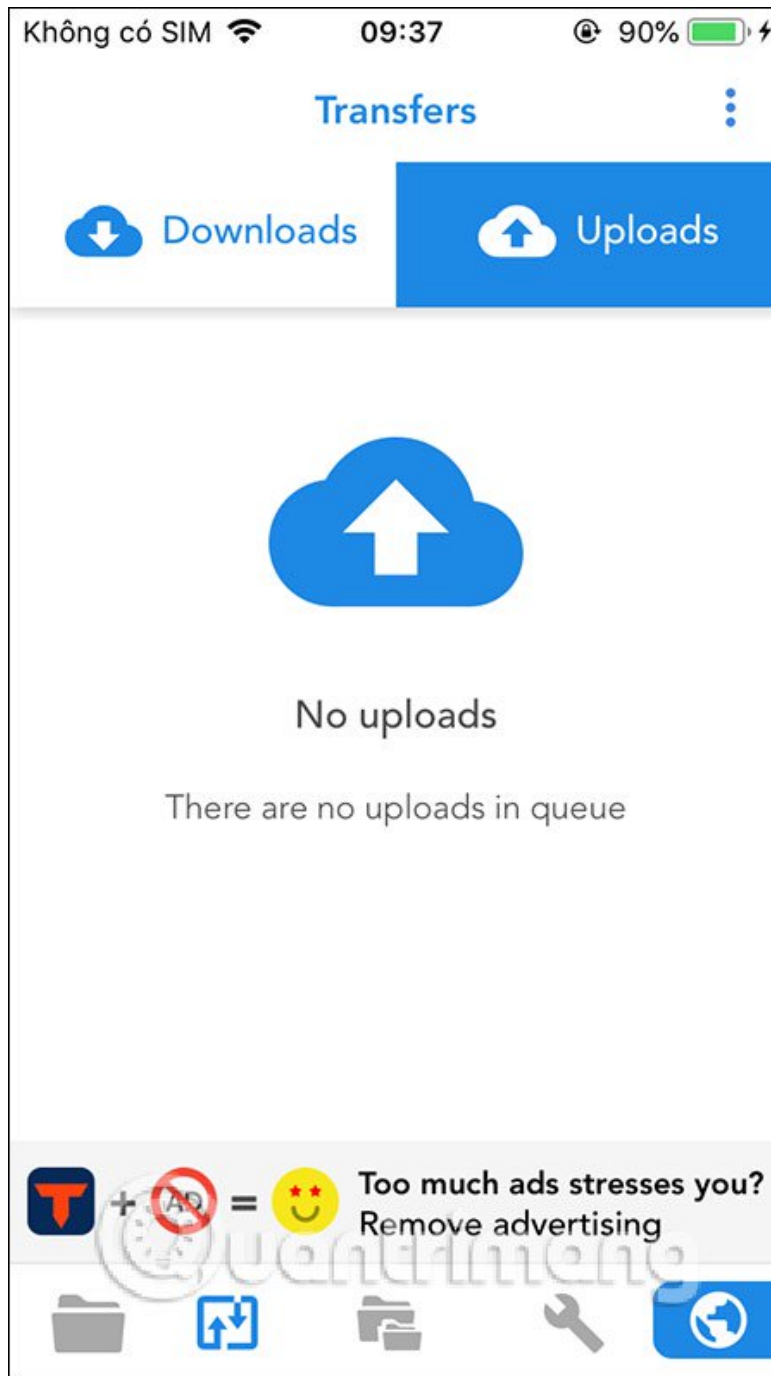

The files being uploaded or uploaded are managed in **Transfer section** as shown.
