

How to mask your face in Photoshop

When editing photos in Photoshop to avoid personal image copyright issues, or you want to hide certain personal information, you can use 2 other content hiding tools.

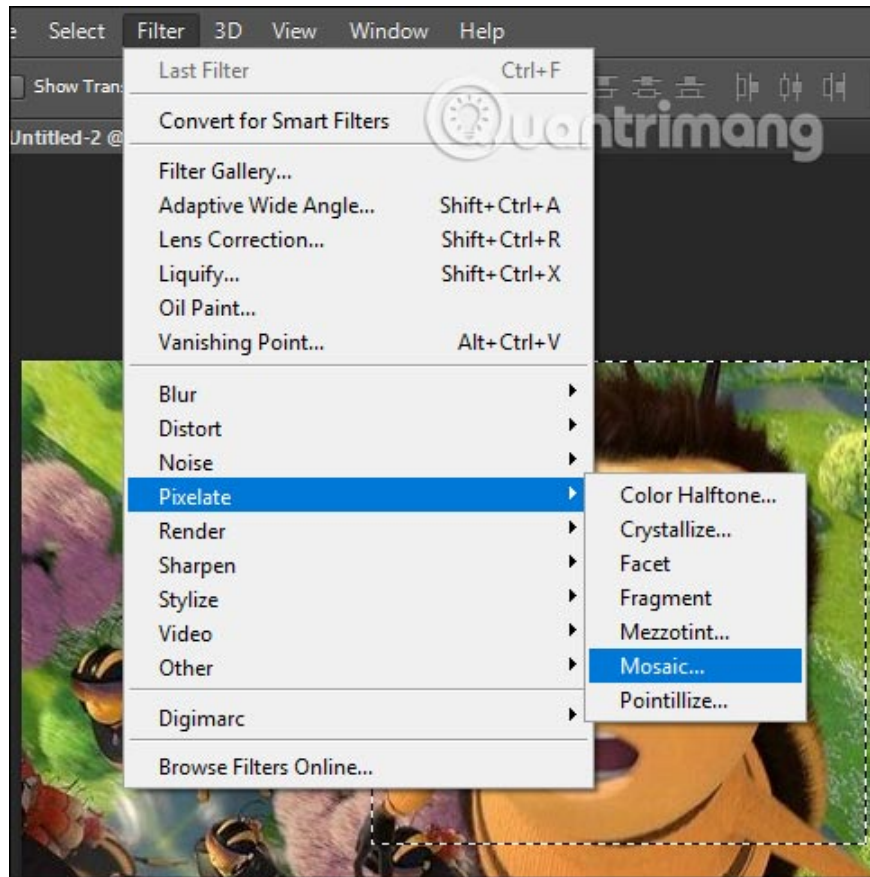

When editing photos in Photoshop or Photoshop online to avoid personal image copyright issues, or you want to hide certain personal information, you can use 2 other content hiding tools. Face masking in photos in Photoshop is one of the simplest and most basic tips. Then the selected image area is blurred, hidden cleverly, naturally without revealing any details. In addition to blurring faces, certain content in Photoshop, the user can completely delete the object in the image in Photoshop, causing that object to disappear in the image. The following article will guide you 2 tools to blur faces in Photoshop.

1. Blur the Mosaic surface in Photoshop

At the image you want to blur the face, we click on **the Marquee Tool** or press the M key and select the **area** to perform operations.

Click **Filter** on the toolbar and then continue to click on **Pixelate** then select **Mosaic** feature .

Now show the interface for us **to adjust the level of blurring the face** , the selected area in the **Cell size bar** . If you increase the number at Cell size, the amount of blur increases. Click OK to save.

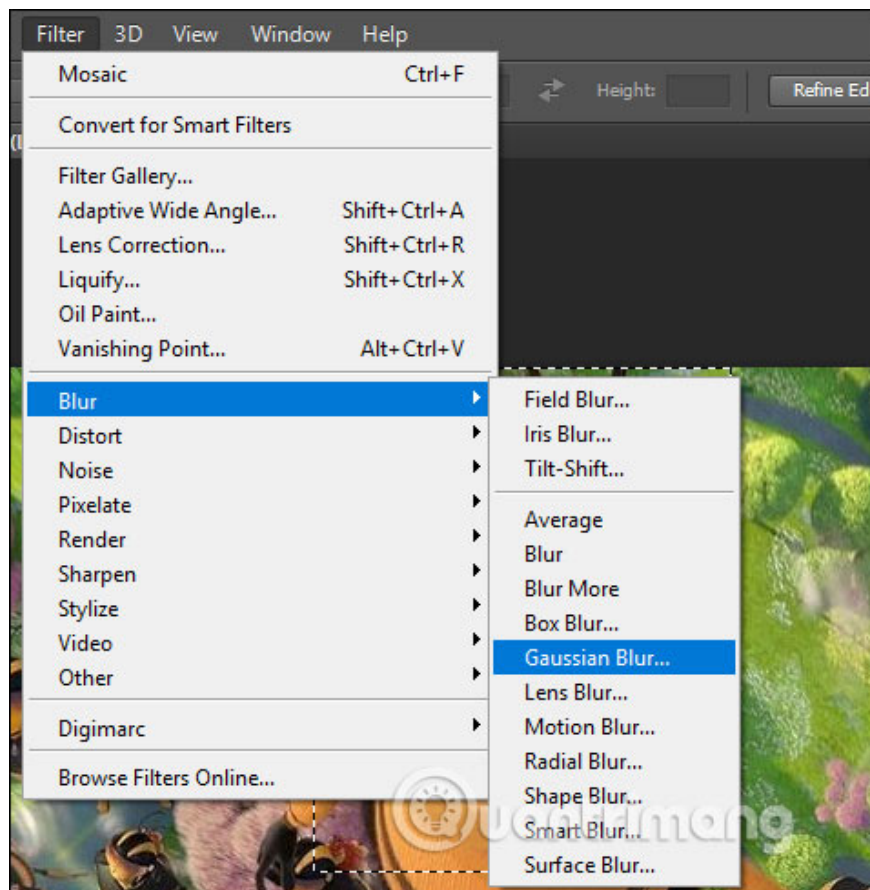

The result of the selected area is hidden as the following shapes.

2. Blur the object with Gaussian Blur Photoshop

First, you also use the tool to localize the face, the details you want to blur. Then click on **Filter** then **Blur** and select **Gaussian Blur** .

Then you also adjust the **amount of blur** for the selected area in **the Radius bar** and then click OK to apply. This type of blur is more smooth than the Mosaic blurring above.
