

How to measure the alcohol content with a smartphone

With the guide to measuring the alcohol content with your phone on this smartphone, you will know what is the indicator of alcohol concentration in the blood.

The penalty level under Decree 100 states that if the blood or breath contains alcohol but does not exceed 50mg / 100ml of blood or 0.25ml / 1 liter of breath, the person who uses alcohol will be fined at least 2 million. copper.

But if you want to measure the alcohol content, you only have to use an alcohol meter to know if the amount of alcohol you've drunk has reached a fine or not. In the absence of an alcohol meter, you can use the smartphone alcohol meter below this article to find out what your blood alcohol level is.

Instructions for measuring the alcohol content on a smartphone

Step 1: Visit the link for measuring alcohol content on the phone below.
