

How to merge applications into a window on Windows

To open multiple applications simultaneously on a Windows window, we can use Stardock's Groupy software.

On Windows 10 Build 17661 version introduces users to the Sets feature to group open application windows into the same window to manage. Work in each application is still conducted as usual without affecting each other. So what about other Windows versions that want to use this feature?

There are a lot of software that helps you bundle applications into a window such as Groupy of Stardock, which develops tools to manage or tweak Windows. The software is suitable for Windows 7 and above, arranging application windows into a group for easy access and application management. Let the group just drag this window to another window, or drag the tabs out of the group if you want to remove the group. The following article will guide you how to use Groupy software to group applications into a management window.

1. How to merge Windows application windows into one?
2. How to get Tab on File Explorer in Windows 10
3. How to check the Sets feature is enabled on Windows 10 Insider Preview build

How to merge applications into a window on Windows

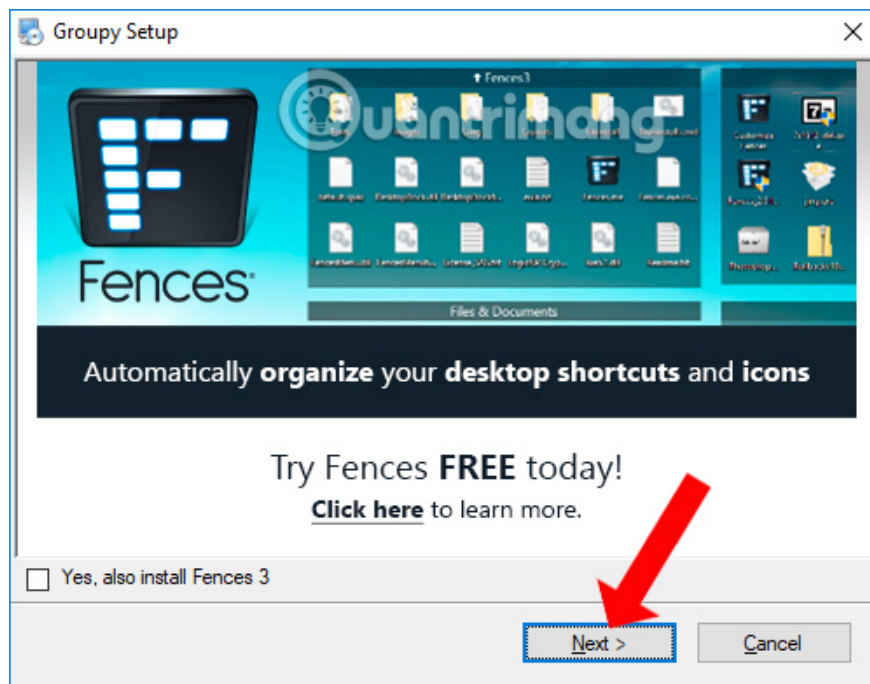

Step 1:

You download Groupy software under the link below and then proceed to install on the computer.

1. <https://www.stardock.com/products/groupy/>

Step 2:

During the installation process you will be prompted to install additional Fences software. If you do not want to use, uncheck the box below and click Next to continue.

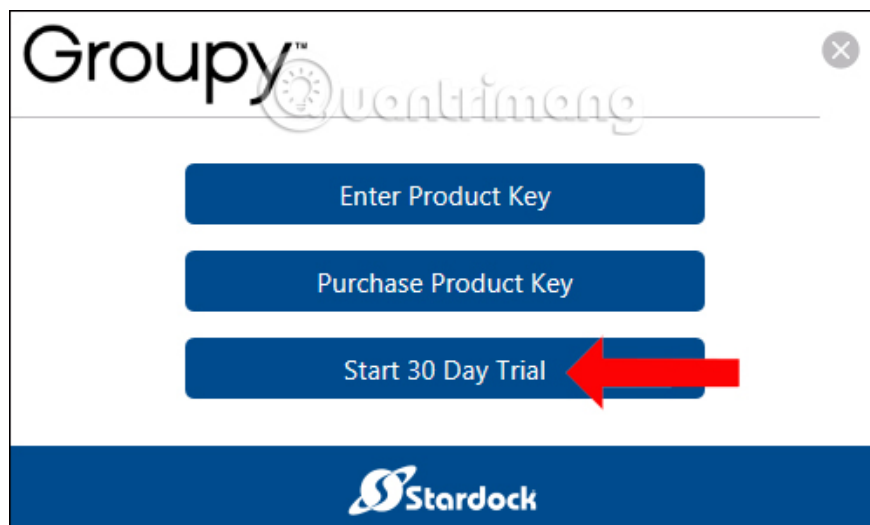

Finally wait for the installation process to complete.

Step 4:

The software will require users to access the email address to identify individual accounts.

Groupy™

Stardock has sent a verification email to [redacted]@gmail.com.
Please click the included activate link before proceeding.

If the email has not arrived within a few minutes, please check your
spam folder.

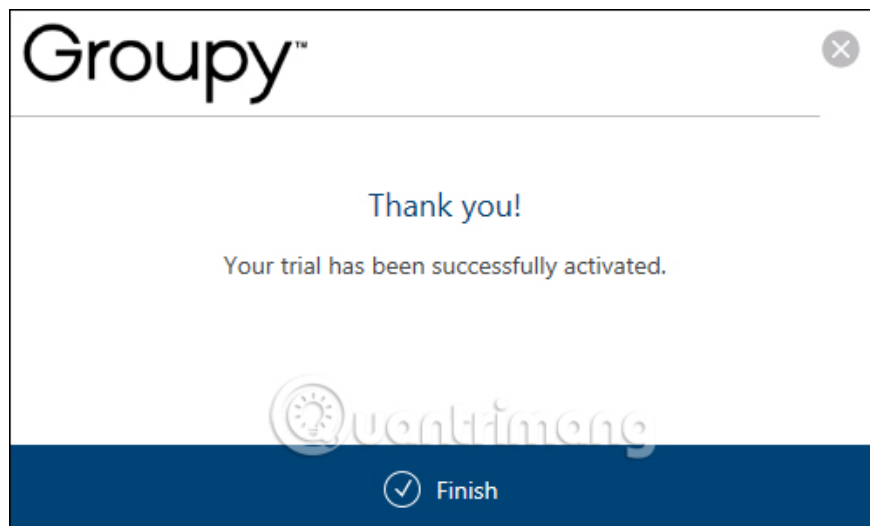

Groupy™ Quantimeng

Back < > Continue

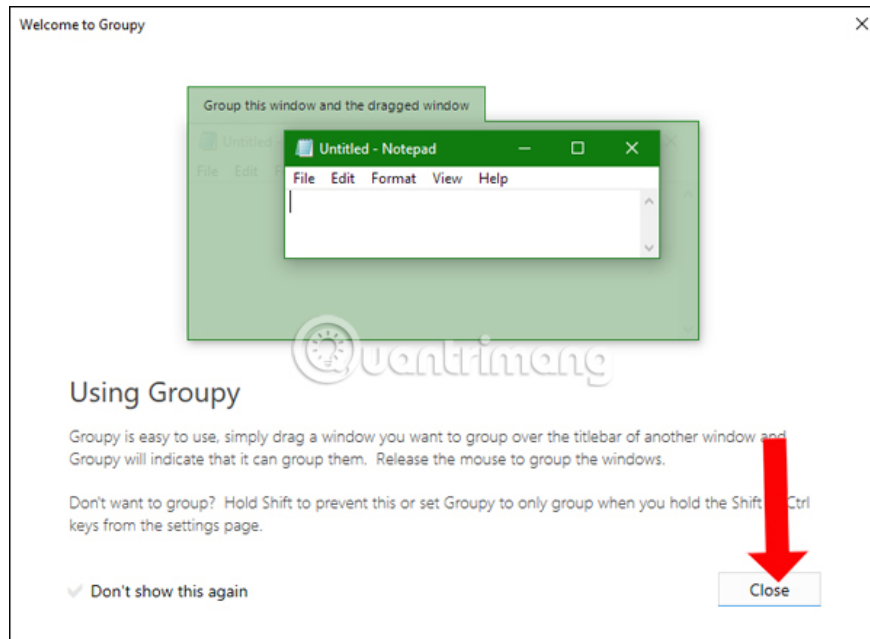

Click the **Active 30 Day-Trial** button.

At that time, the Groupy installation interface will display the **success message** as shown below.

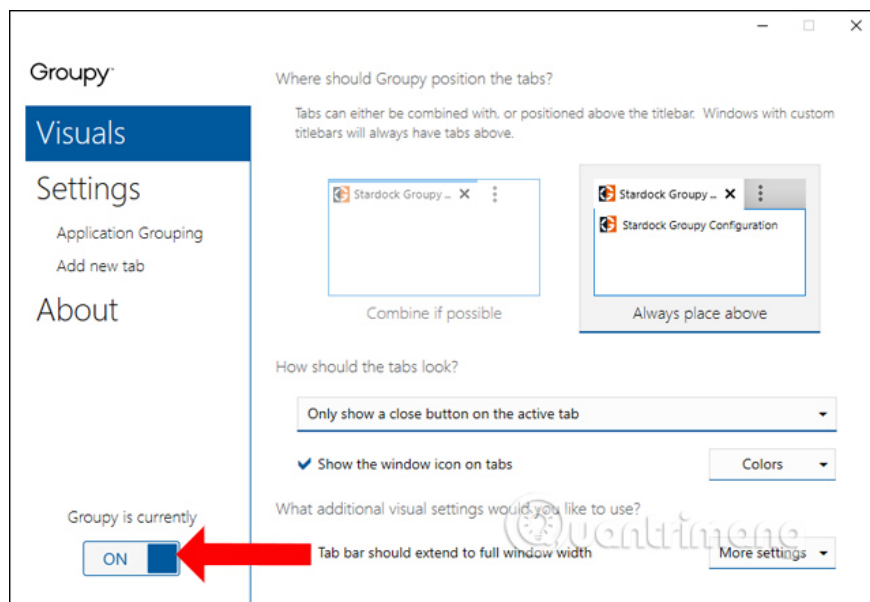

There will be a Groupy interface, click **the Close button** to close this interface.

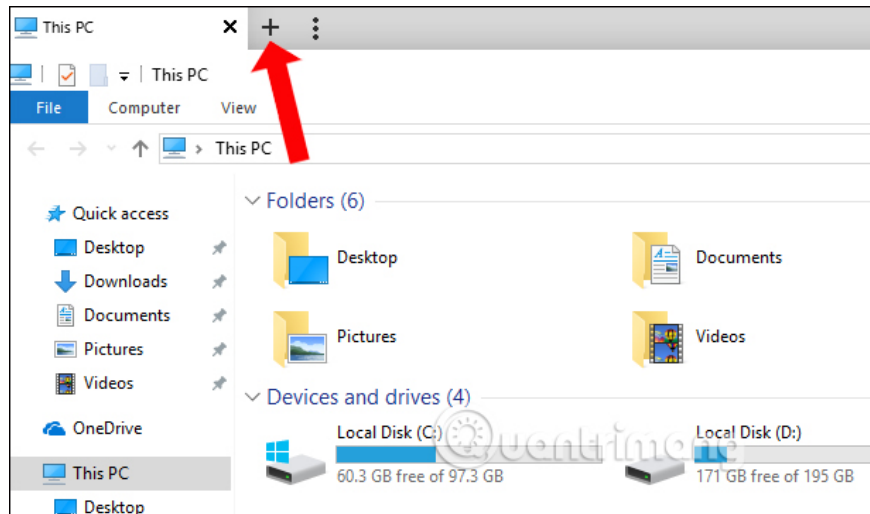

Step 5:

At the Groupy software main interface, you will see the management of the software to customize if needed. If you don't want to use Groupy, just switch to Off.

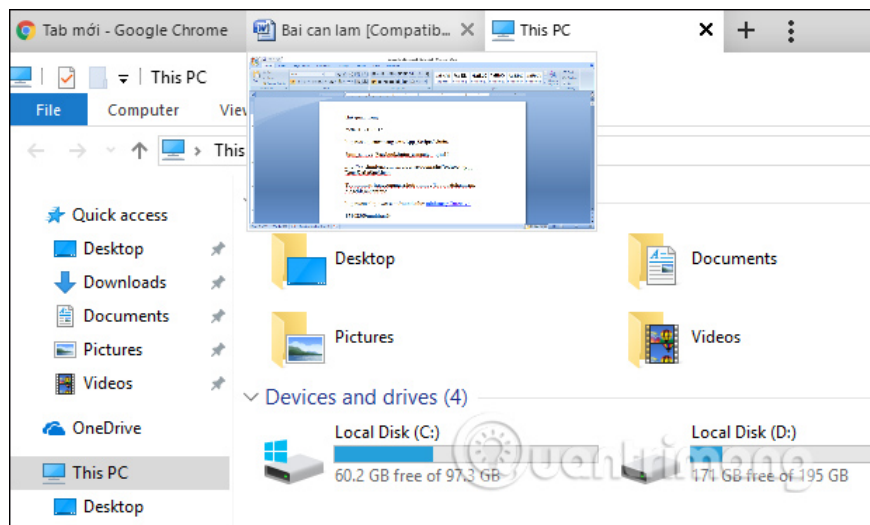

When we open an interface we will see an additional bar as shown below. You can press **the +** to double the open interface.

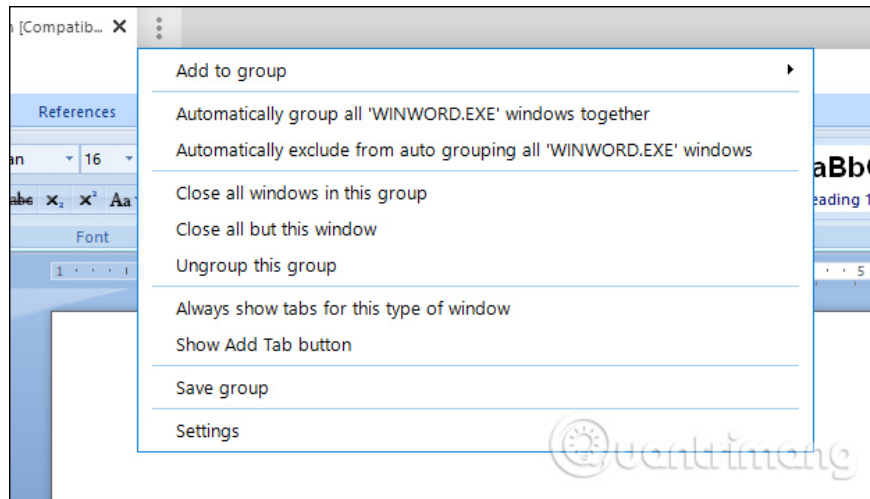

Now users can use Groupy to group open application tabs on the computer to the same window. It is possible to group File Explorer, web browsing window or Control Panel interface on the system, . Just drag this window to another open window and finish.

When moving into another application, there will be a thumbnail of what you are doing.

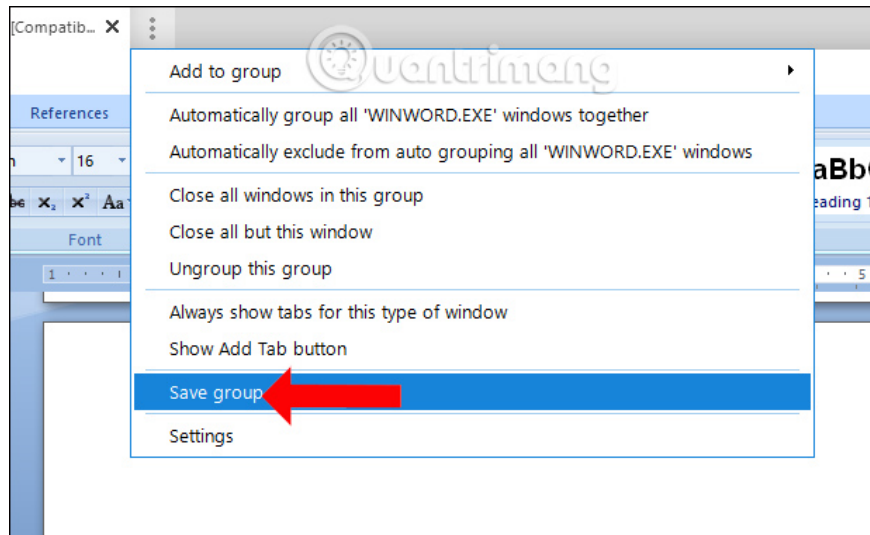

Step 6:

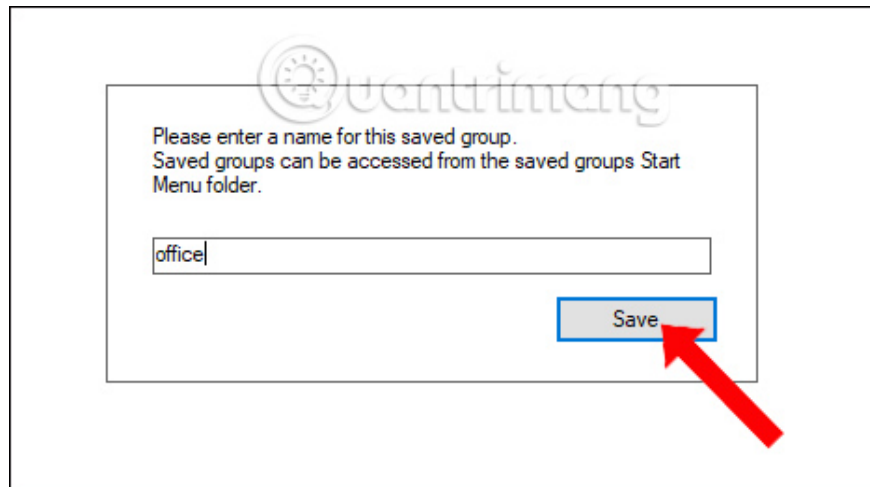

When clicking on **the 3 dots icon** on the app bar, users will have a list of options as shown below.

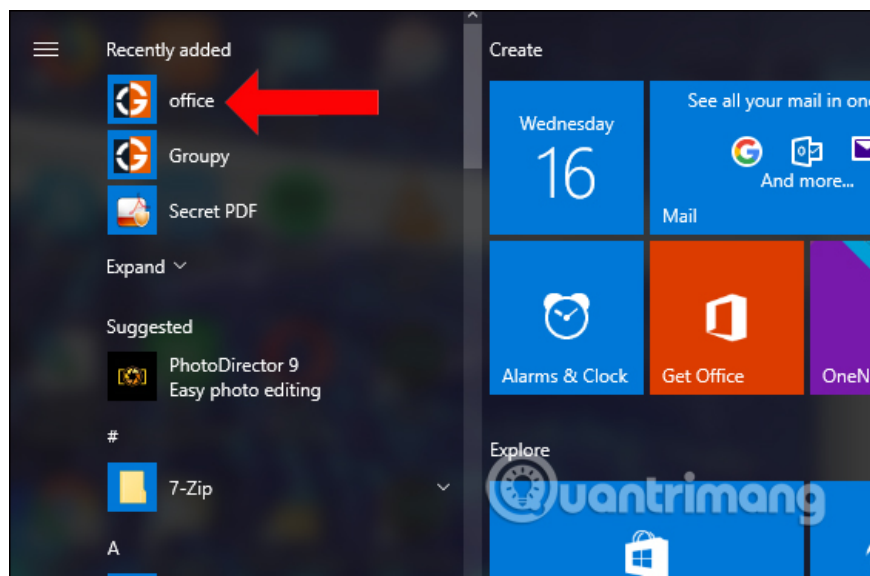

Here the user can group applications that share the same purpose into 1, such as Photoshop software, the Paint tool into an image editing group. If you click on Add to group, the application is available to select the pair. Want to create a new **group** click **Save group** .

Enter the group name you want to create and click **the Save button** to create a new group.

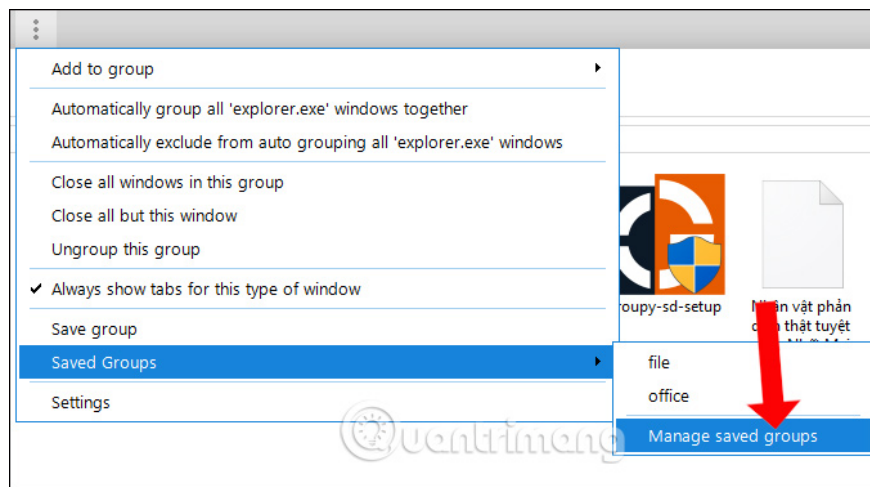

When accessing the **Start menu** you will see the new group created for quick access when needed.

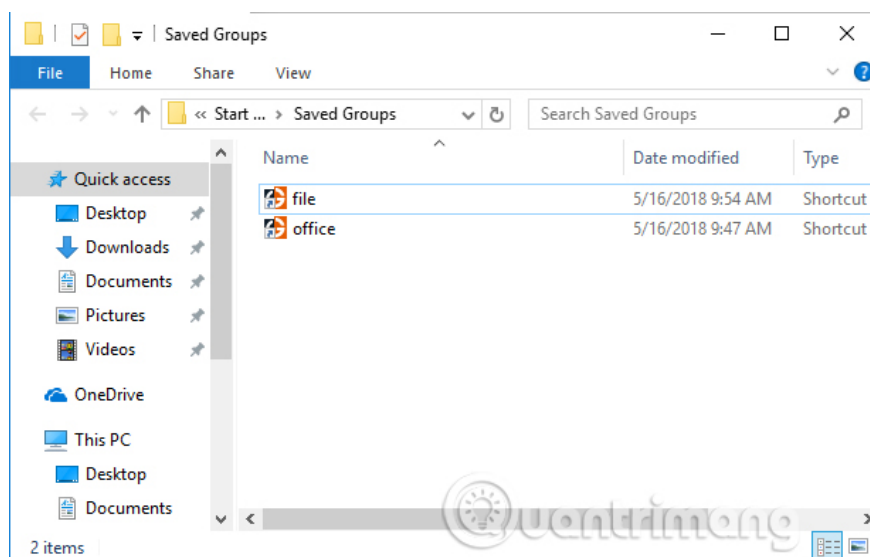

Step 7:

In the case of creating multiple groups and want to delete or customize, click **the 3 dots icon** selected **Saved Groups** and select **Manage saved groups** .

Appears all groups created on Groupy on the computer. Here you can change the name or delete the group if not needed.

No need to upgrade to Windows 10 Build 17661 to experience Sets feature, we can use Groupy software to merge applications into one window. You can still manage tabs as usual, and there's also a feature to combine groups into quick open on the Start menu.
