

How to merge photos into the frame on Paint

Collage into Pain frames is very simple, can be combined with many different frames.

Collage is one of the ways to refresh your photos in a very unique way. We can combine multiple photos together or merge them into picture frames. To merge photos, you need to use photo compositing software, or simply use Paint.

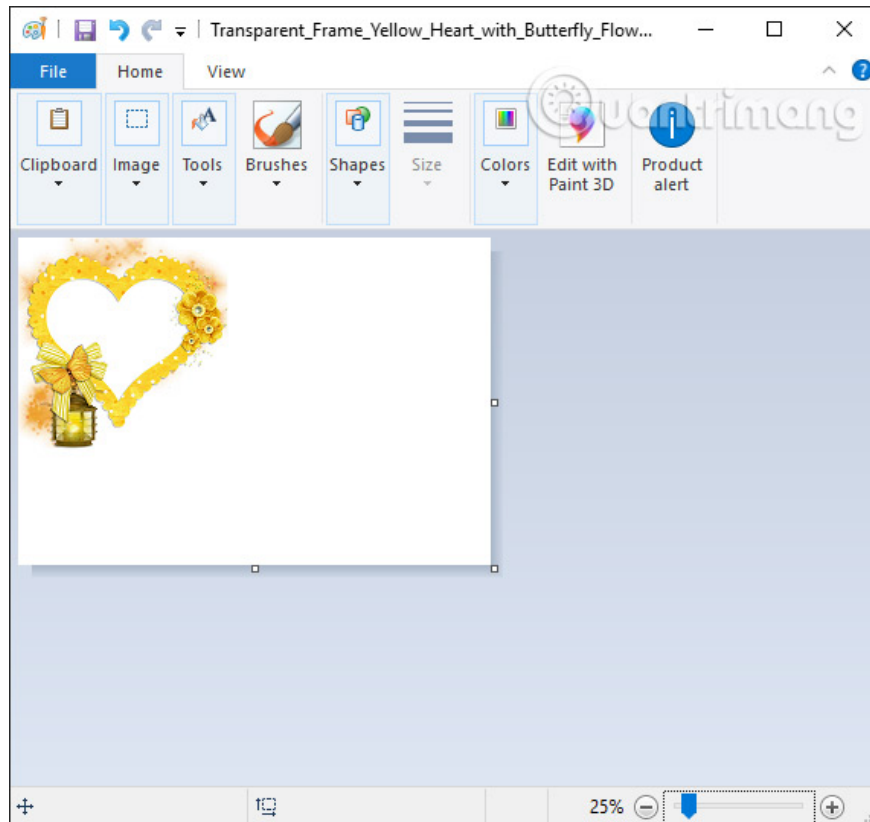

Although there are no advanced professional photo editing features like other software, but painting images on Paint is very simple and easy. We can combine multiple images into one image, or use the existing frame to stitch the image. From there you can use the newly merged image into the frame and then merge it into another image. The following article will guide you how to read pictures on Paint.

1. The best free photo editing software on your computer
2. Top software to create videos from photos on Android
3. How to combine photos on software CollageIt
4. How to combine photos in Photoshop from 2 different images

Instructions for blending photos on Paint into frames

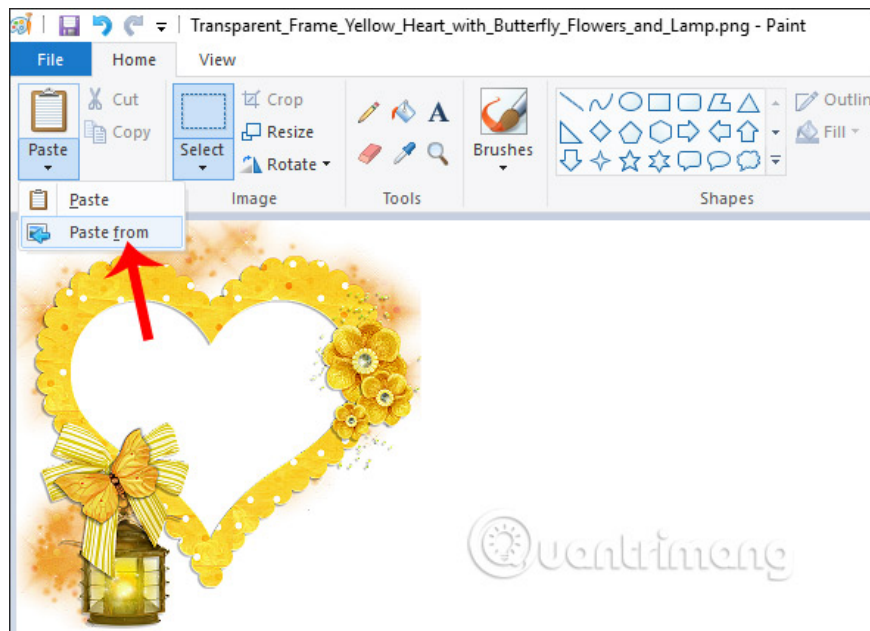

Step 1:

We download the picture frame we want to frame. Next, the user clicks the bottom corner of the image when a 2-dimensional arrow appears and drags to **expand the image area** .

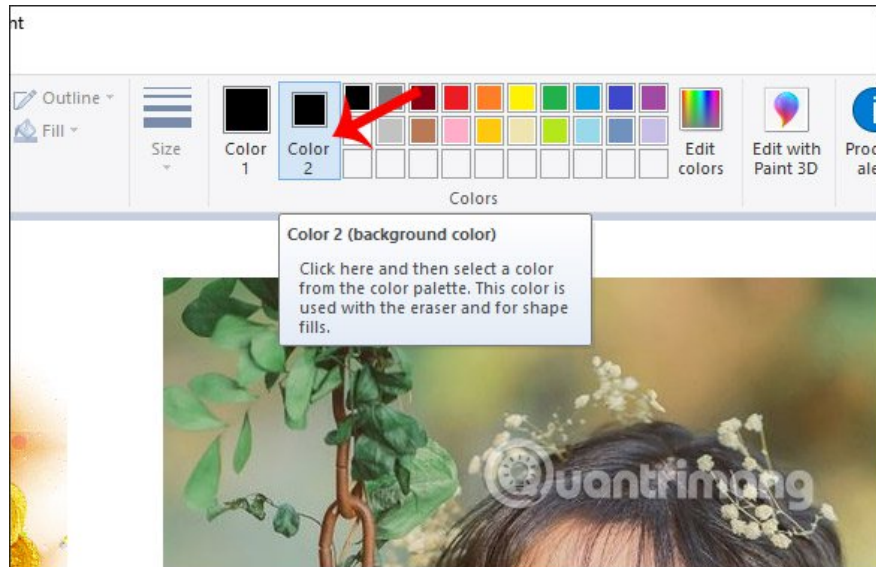

Step 2:

Next **click Paste** and **select Paste form** and **select the image you want to merge into the frame** . So we have 2 images to be processed on Paint.

Step 3:

Next, click on **Color 2** and then **select black** in the color palette next to it.

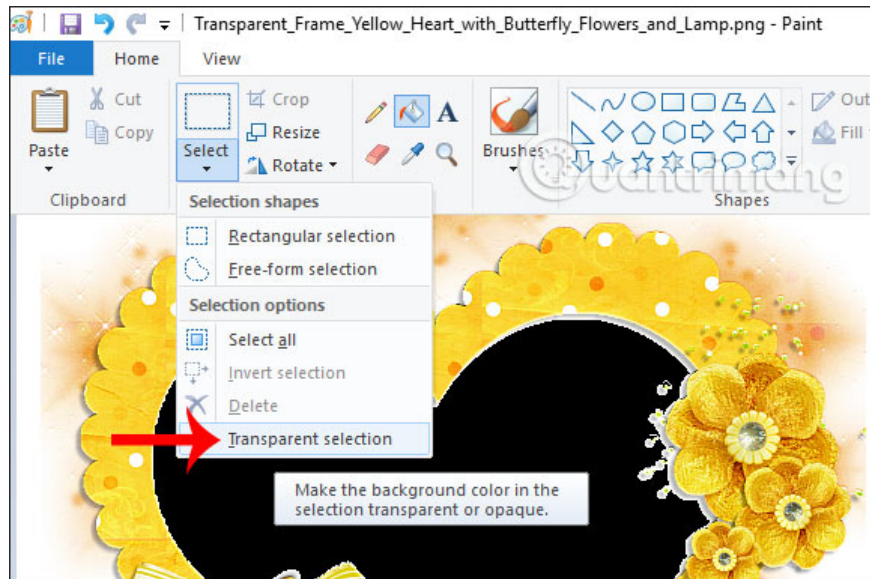

Next, click on **the Fill with color paint bucket icon and fill it with black in the part you want to merge** . In the picture is the area inside the heart shape. When the fill color is finished the area inside the image will have a black shape as shown below.

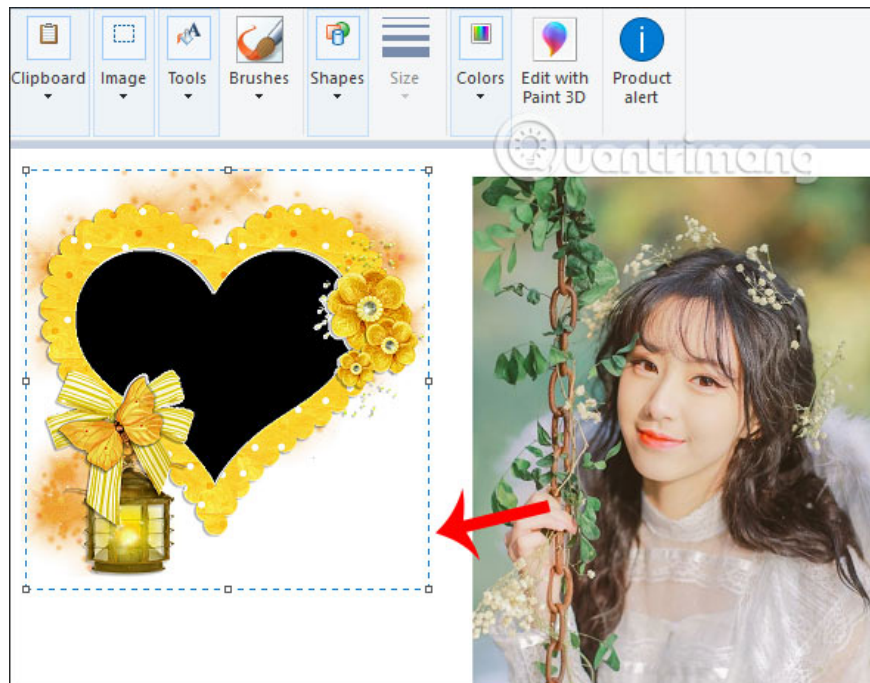

Step 4:

Users click on **the Select section** and click **Transparent selection** to make the selection transparent.

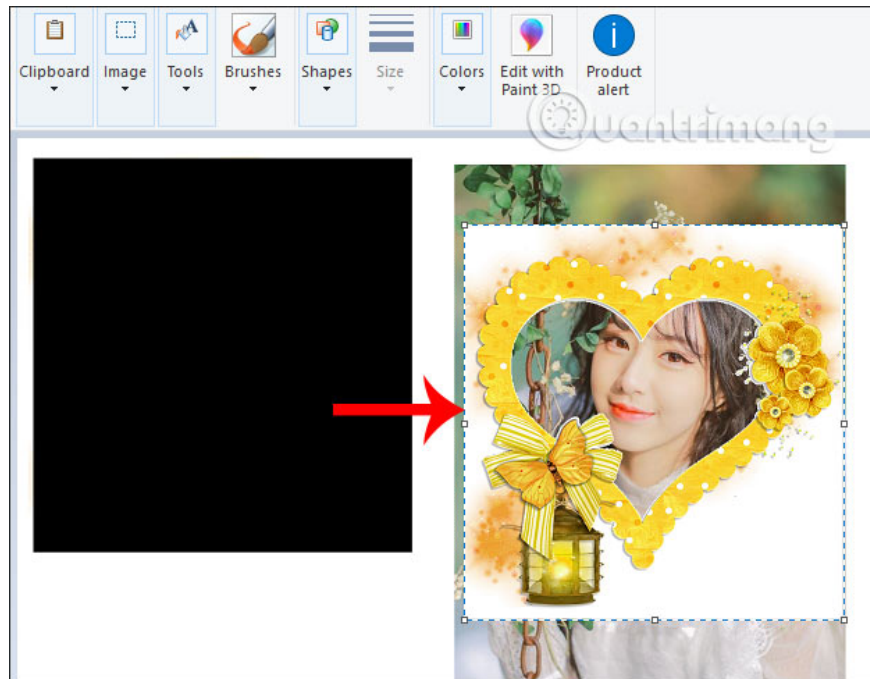

Click on **Selection** and then use the mouse to **circle the image** .

Step 5:

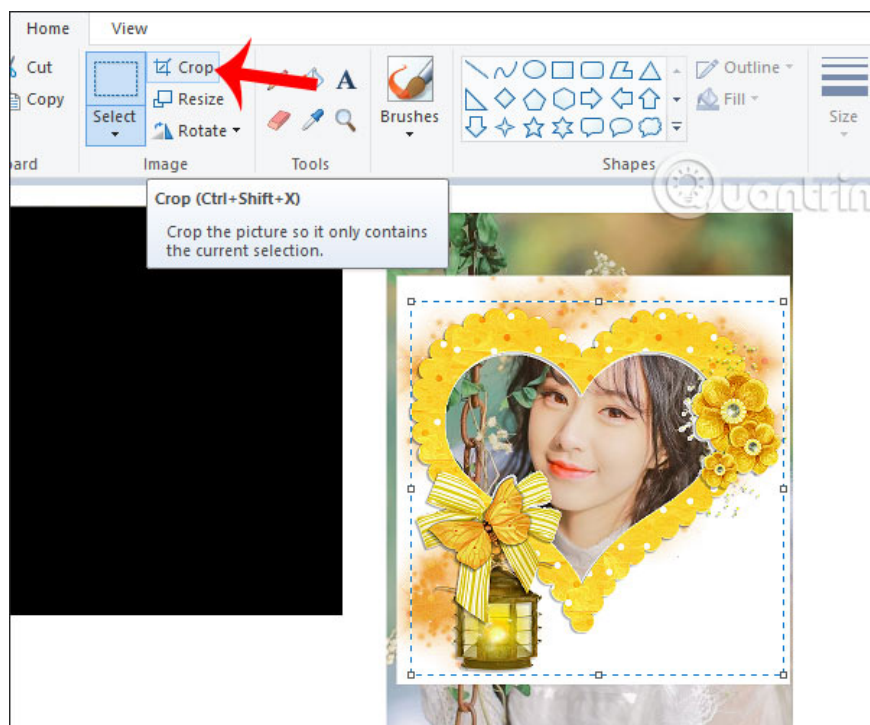

Once you have selected the frame area, we **move the image frame to the side of the image** to select the area of the image to be blended into the frame. The user moves the frame to the position you need to pair. The inner part of the heart has become transparent to blend into another image.

Step 6:

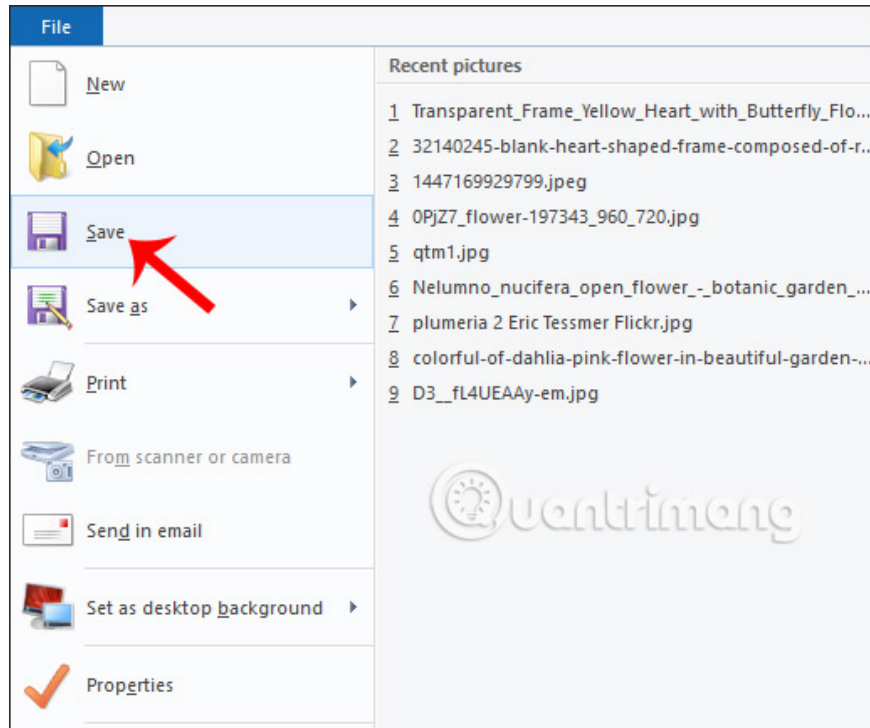

When you like the image area, we continue to manipulate the removal of unnecessary, unnecessary areas of the image. You also click **Selection** , **drag the frame around the image area to use** , and then click **the Crop text** above to crop the image.

In case you want to edit it at any step, press **Ctrl + Z** to return to the operation to be changed again.

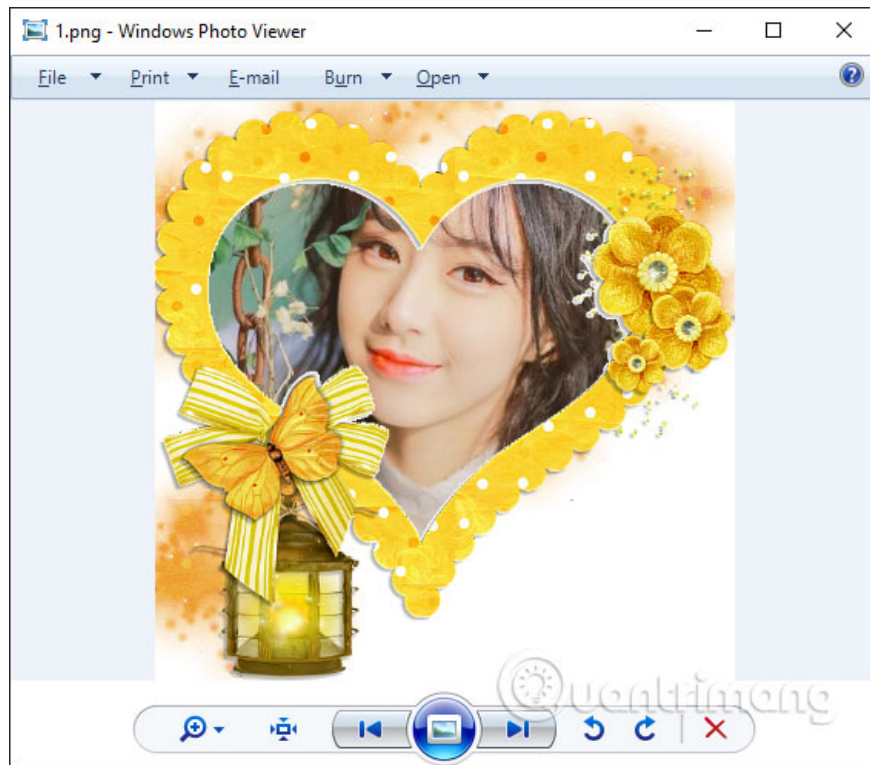

Step 7:

Finally, click **File** and then **Save** to save the image, or click Save As to save the new image.

The complete image when merged into the frame is as follows. In addition to the heart frame, you can choose other more artistic frames.

So you already know how to blend the image into Paint's frame. We can choose any frame we want and then blend the existing image into the frame.

I wish you all success!
