

How to Monitor Someone's Devices So You Can Be In-The-Know and Enjoy Some Peace of Mind

Are you concerned about your child's whereabouts or your partner's fidelity? Do you worry that your employees might be wasting time instead of working? You're not alone.

Many people have the same concerns and want to keep an eye on the people they care about or are responsible for. Fortunately, modern technologies allow you to track other people's phones. In this article, we will show you how to do it.

Why Is Monitoring Someone's Phone Important?

Monitoring someone's phone can provide valuable information and help you make informed decisions. For example, if you suspect that your child is hanging out with the wrong crowd, tracking their phone can show you where they are and who they're with. If you think your partner is cheating on you, monitoring their phone can reveal suspicious activity. If you're an employer, tracking your employees' phones can ensure they're working during business hours and not wasting time on social media or playing games.

The good news is that you don't have to be a tech genius or spend a fortune to track someone's phone. There are free methods of phone monitoring here that you can use to keep an eye on your loved ones or employees. We will discuss some of these methods below.

How to Monitor Someone's Phone

Check the Phone's Location History

Most smartphones have a feature that allows users to track their location history. If the person you want to monitor has this feature enabled, you can access their location history and see where they've been. To do this, follow these steps:

For iPhone: Go to Settings > Privacy > Location Services > System Services > Significant Locations. You may need to enter your passcode or use Face ID or Touch ID to access this information.

For Android: Go to Settings > Location > Google Location History. You may need to sign in to your Google account to access this information.

Use Apps for Reading Someone's Texts

There are several apps available that allow you to read someone's texts without their knowledge. These apps work by intercepting messages before they reach the recipient's phone. Some of the most popular apps for reading someone's texts include:

mSpy: This app allows you to read someone's texts, track their location, monitor their social media activity, and more. It works on both Android and iOS devices.

FlexiSPY: This app is more expensive than mSpy, but it offers more advanced features such as call interception and live call recording.

Highster Mobile: This app is a cheaper alternative to mSpy and FlexiSPY. It allows you to read someone's texts, view their call history, and track their location.

Use a GPS Tracker

A GPS tracker is a device that allows you to track someone's location in real-time. There are many GPS trackers available on the market, ranging from small and discreet devices that can be attached to a person's clothing or bag to larger devices that can be installed in a vehicle. Some of the most popular GPS trackers include:

Spytec GPS Tracker: This GPS tracker is small and discreet, making it perfect for tracking a person's location. It has a long battery life and can be attached to a person's clothing or bag.

Vyncs GPS Tracker: This GPS tracker is more expensive than the Spytec GPS Tracker, but it offers more advanced features such as real-time location tracking and vehicle diagnostics.

Tile Mate: This GPS tracker is designed to be attached to a person's keychain or bag. It uses Bluetooth technology to track the person's location within a certain range.

Use Parental Control Software

If you want to monitor your child's phone, you can use parental control software. This software allows you to set limits on your child's phone usage, block inappropriate content, and monitor their online activity. Some of the most popular parental control software options include:

Norton Family: This software allows you to set screen time limits, block inappropriate content, and monitor your child's online activity.

Qustodio: This software offers similar features to Norton Family, but it also allows you to track your child's location and block specific apps.

Screen Time: This app is designed specifically for iOS devices and allows you to set screen time limits, block specific apps, and track your child's phone usage.

Use Find My Device

If the person you want to monitor has an Android phone, you can use the Find My Device feature to track their location. To do this, follow these steps:

Go to the Find My Device website or download the app.

Sign in with the person's Google account information.

If the person's phone is turned on and connected to the internet, you will be able to see their location on a map.

Conclusion

Monitoring someone's phone can provide valuable information and help you make informed decisions. Whether you want to keep an eye on your child's whereabouts, monitor your partner's fidelity, or ensure your employees are working during business hours, there are several free methods of phone monitoring here that you can use. From checking the phone's location history to using parental control software, there are many options available to suit your needs and budget. However, it's important to remember that monitoring someone's phone without their knowledge or consent can be illegal and unethical. It's always best to have an open and honest conversation with the person you want to monitor and get their permission before using any of these methods. By following these steps, you can be in-the-know and enjoy some peace of mind.
