

# How to move Google Authenticator information to a new phone

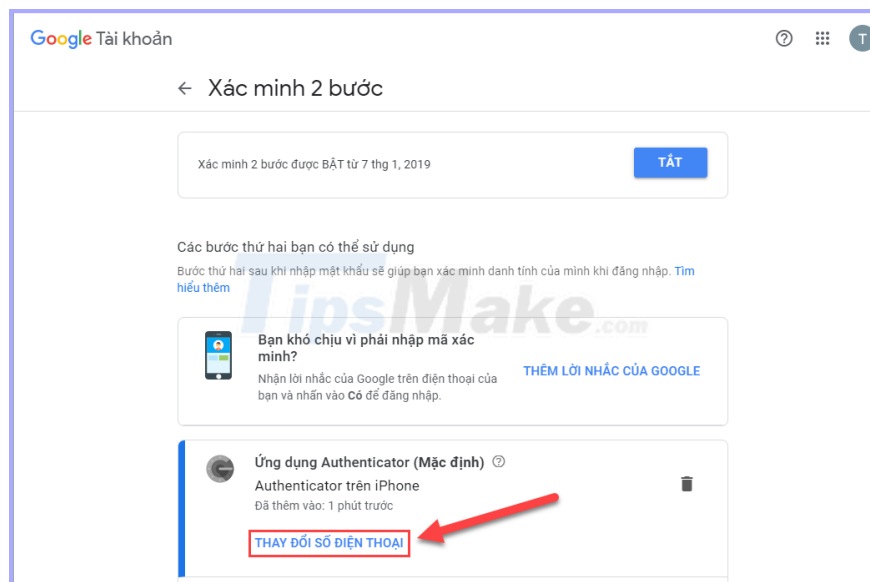

Google Authenticator is a useful software on your phone because it makes it possible for us to get a 2nd verification code when signing in to Google accounts. However, how about you use a new mobile device and want to transfer Google Authenticator information to a new mobile device?

## 1. Transfer Google Authenticator information to a new phone

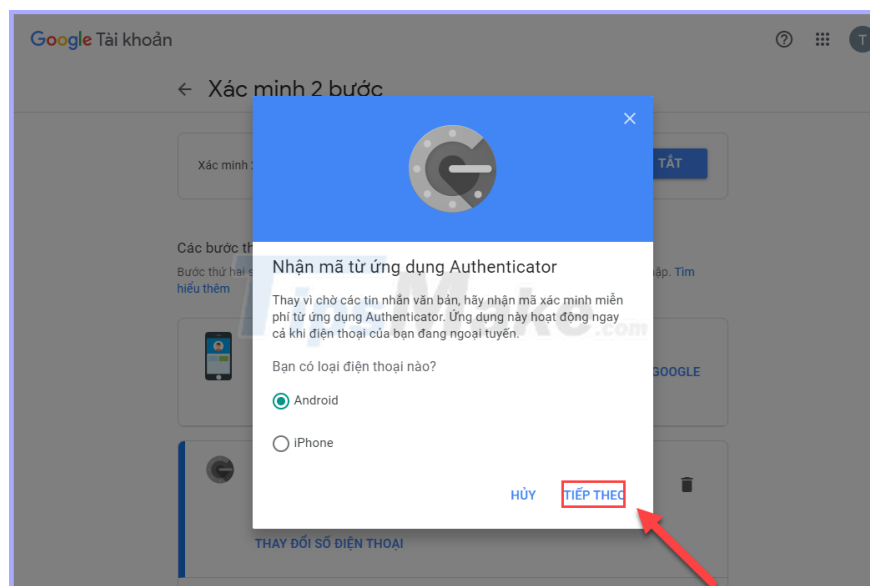

**Step 1:** You proceed to the [Google 2-step verification settings homepage](#) in the browser and select **Start** to sign in.

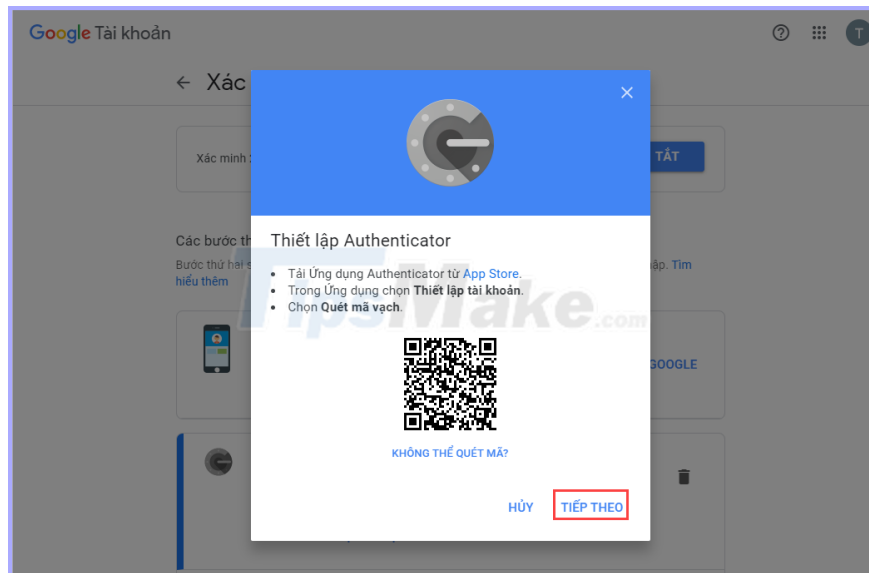

**Step 2:** After logging in, you will return to the main interface of 2-Step Verification. Next, select **Change phone number of the Google Authenticator Application** .

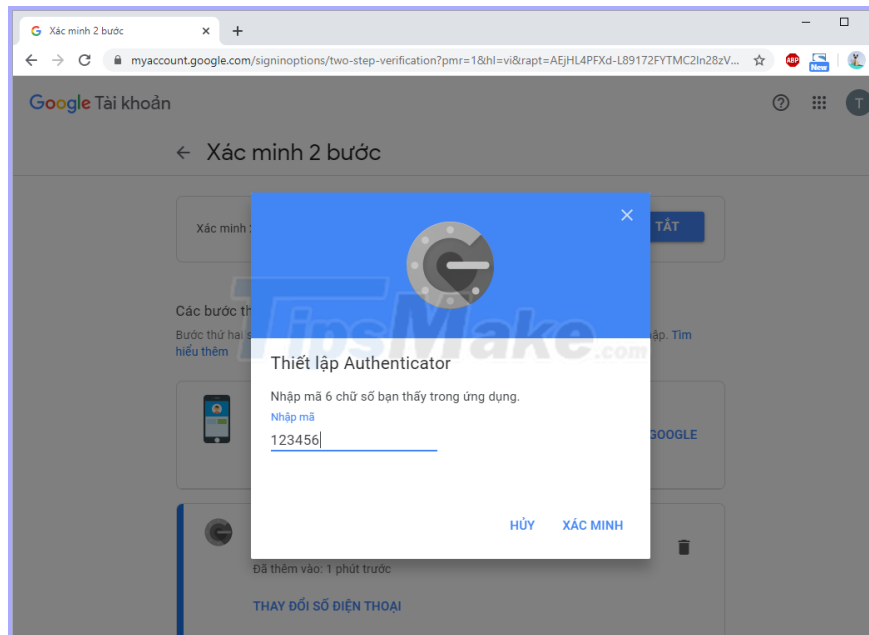

**Step 3:** Then, you select the operating system that corresponds to the phone and click **Continue** to begin.

**Step 4:** Next, you use your phone (new) and use the **Google Authenticator** application to scan the **QR** code to enter the security code.

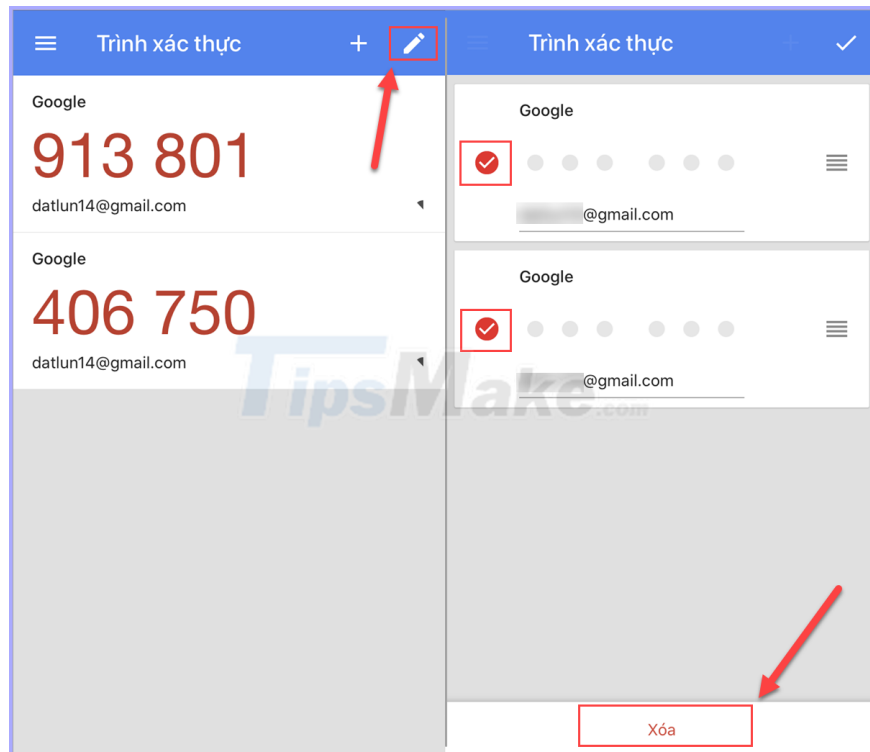

**Step 5:** Then, you select **Verify** to complete the transfer of data from Google Authenticator to your new phone.

## 2. Delete Google Authenticator on the old device

You proceed to open the Google Authenticator application on your old device and select **Edit** . Then you **tick the old 2FA code** and select **Delete** to finish.

Then, you delete the Google Authenticator application on your old phone is complete.

In this article, TipsMake showed you how to transfer information from **Google Authenticator** to your new phone. Good luck!
