

How to obscure objects on videos Camtasia

On Camtasia there is an option to blur the object to hide certain content on the video.

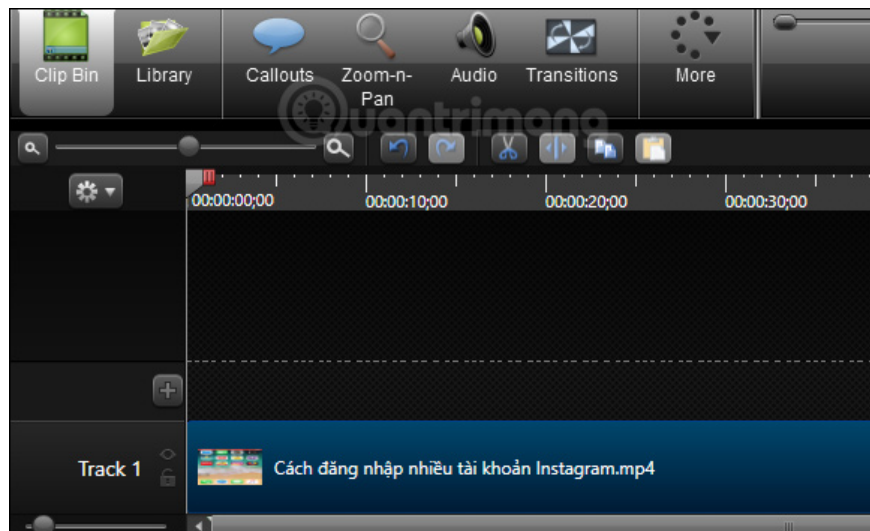

Camtasia is not only a video recording software, but also a video editing software with basic to advanced customization. During the video editing process, if you want to hide an object that doesn't want to cut the video, it can blur the content on the video. We will select the location we want to blur, the time to use the blur effect and the size for the object area we want to blur. The following article will guide you how to obscure the object in the video on Camtasia software.

1. How to separate audio, split video by Camtasia Studio
2. How to cut video by Camtasia Studio
3. How to pair 2 videos into 1 using Camtasia Studio

Instructions to blur video objects on Camtasia

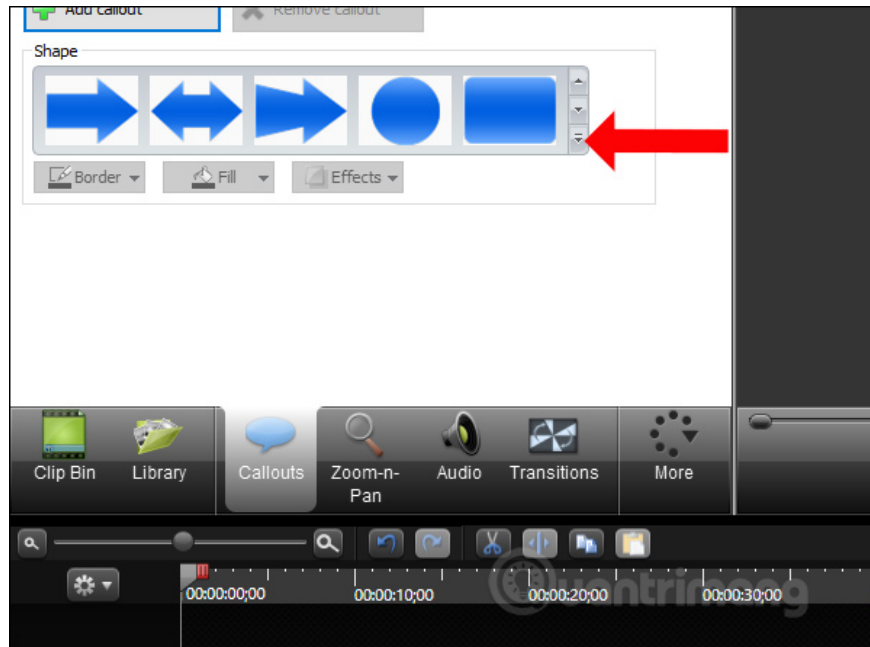

Step 1:

In the Camtasia interface, we **drag the video to the Timeline bar** to conduct video editing.

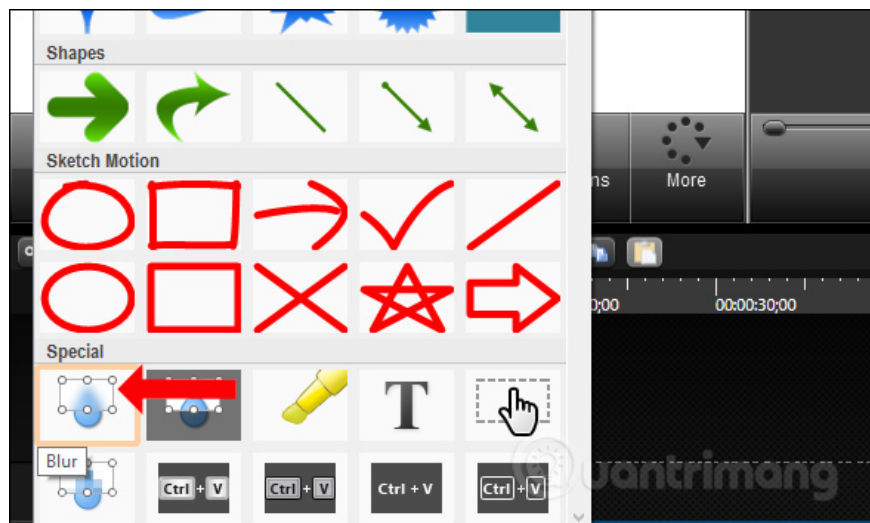

Step 2:

Click on **Callouts** then click on **the triangle icon** to expand the options for the video.

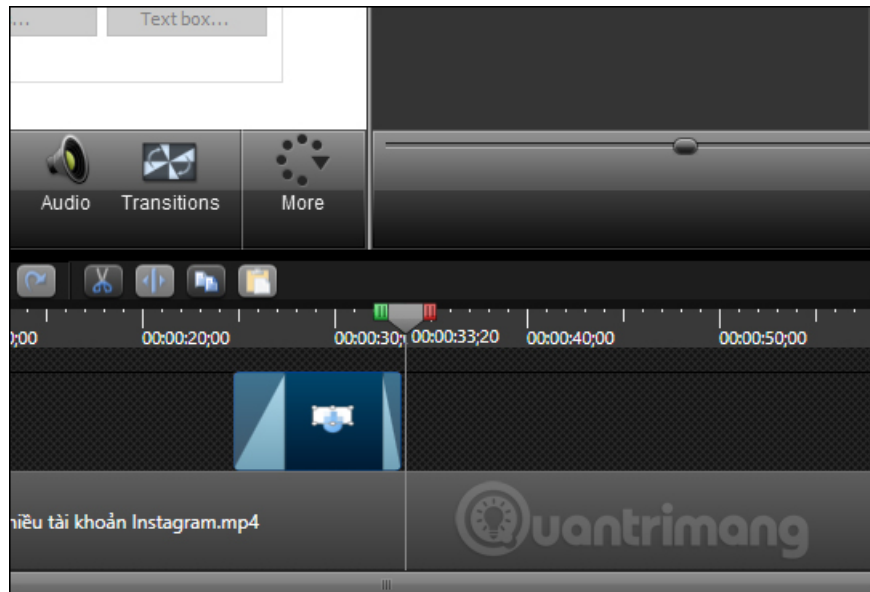

Display the tool panel, in the **Special** section, click on the **Blur** tool to blur the object on the video.

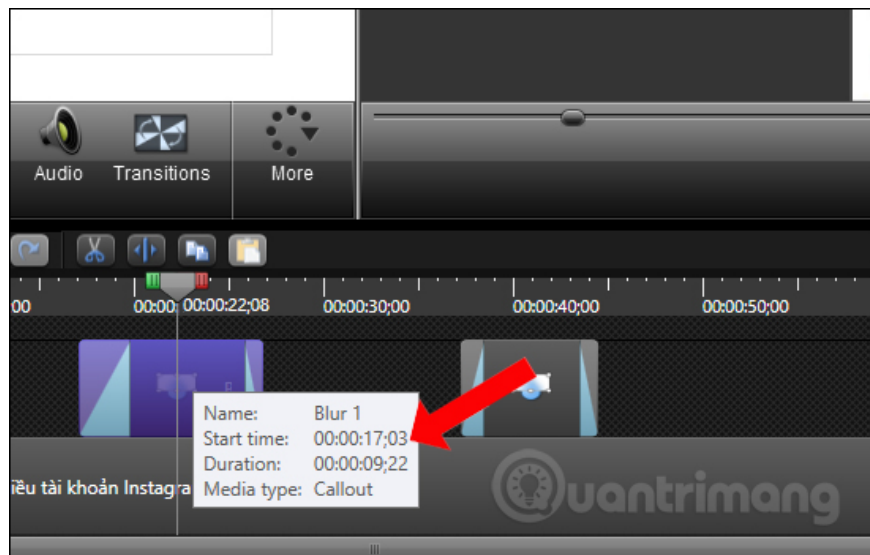

Step 3:

Then on the Timeline bar will display the Blur tool at Track 2 as shown. Drag this blurry frame to the time the video you want to hide the object. The video also shows the blurring area.

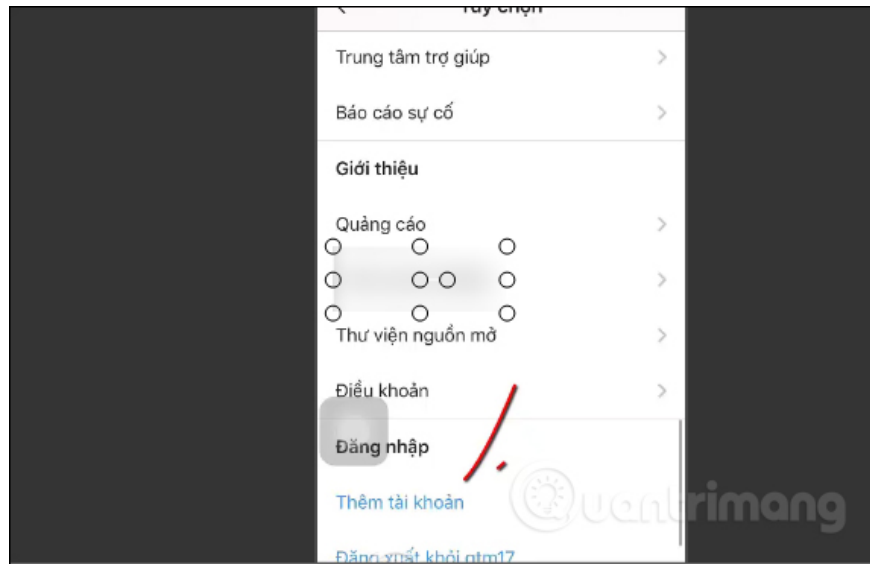

Hovering at the Timeline bar will see information about blurring effects including:

1. Name: The name of the blur effect.
2. Start time: The time when the effect appears.
3. Duration: The total time from when it appears until the effect disappears.
4. Media type: Callout type.

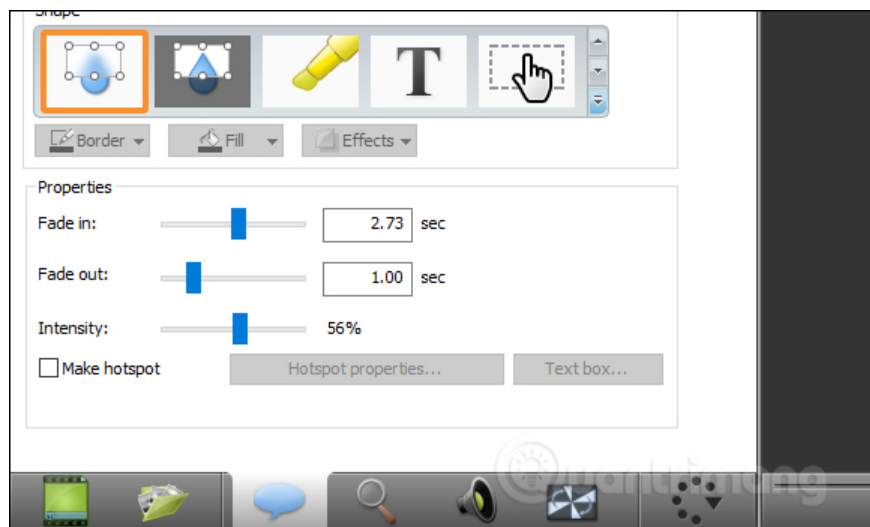

Users can resize this blurring area to cover the entire content. You have the frame around to increase or decrease the size of the frame to blur the content.

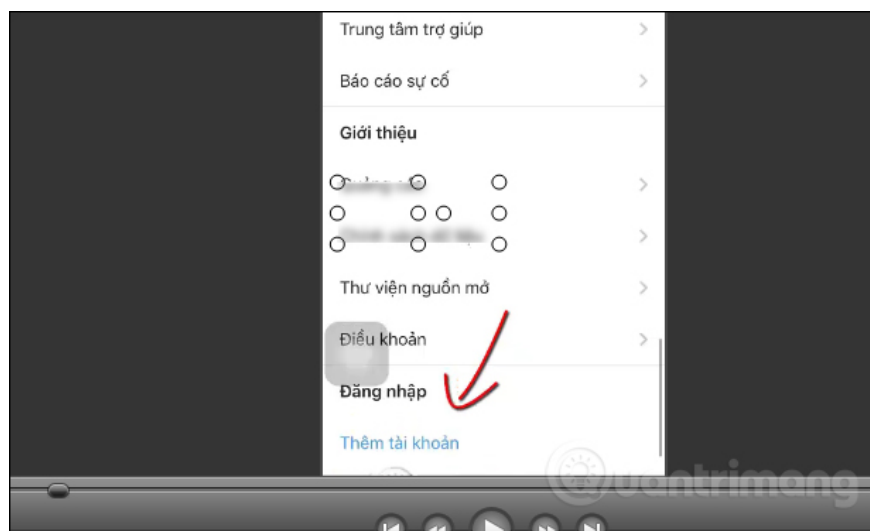

Step 4:

In the **Properties** section, there is an option to adjust the blurring effect and the level of blurring. Fade print is used to adjust the time to display blur effect in the video. Fade in order to gradually fade away the blur effect. Intensity to adjust the blur level on the video.

For example, with a blurring level of 28%, the blurring effect is displayed on the video as shown below.

If you don't like the Blur mode, you can change it to Pixelate. Finally export the video as usual.

With the Blur tool on Camtasia, we can cover the content or details in the video such as phone number, account number, personal address, . Depending on the content and the subject needs to blur in the video that users adjust the size and add other customizations accordingly.
