Instructions on how to open multiple BlueStacks windows at the same time on your computer

Once BlueStacks is installed, on your computer will display two icons, one main icon will open BlueStacks application. The second icon is **BlueStacks Multi Instance Manager** , click on it.

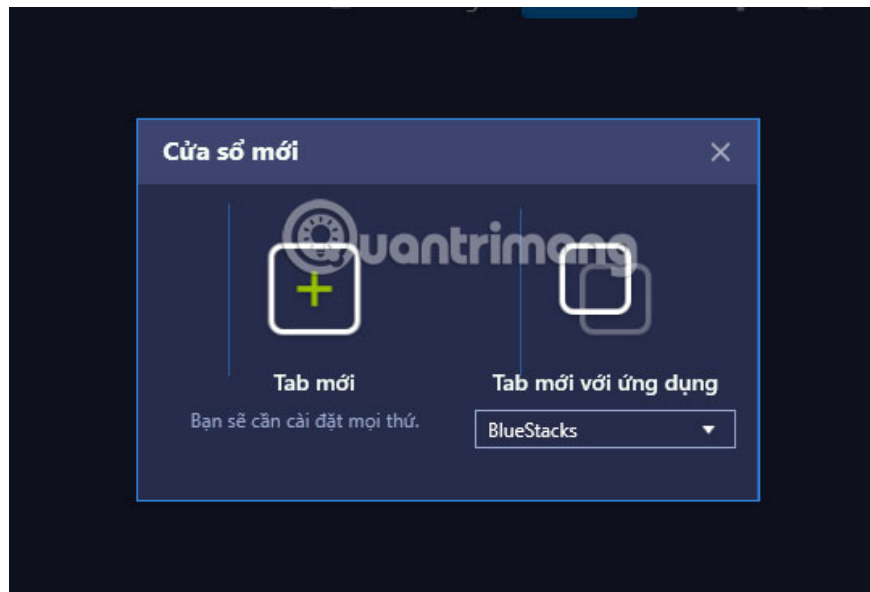

Now the BlueStacks multitasking manager window, to add a new bluestacks window, click New window.

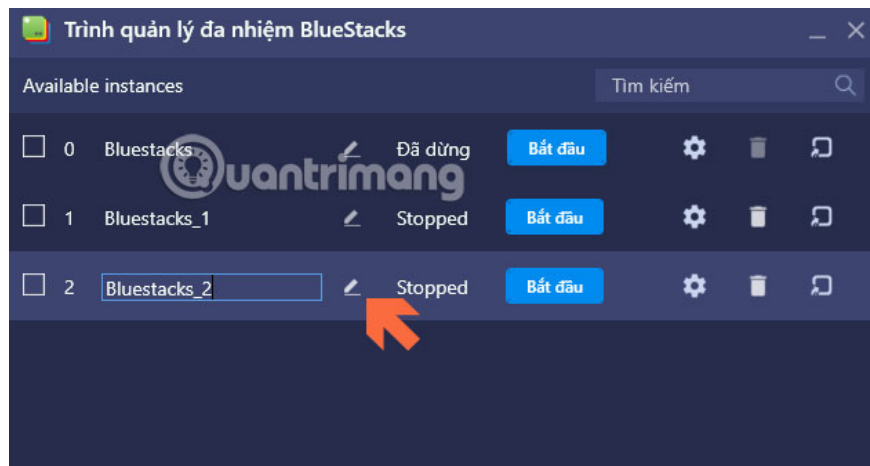

Next you will have two options, the New Tab and the New Tab with the application. With the **New Tab** , you will have to set everything up from scratch, you will have to set up and log in to the account in this emulator window, then act as a window that you have just downloaded.

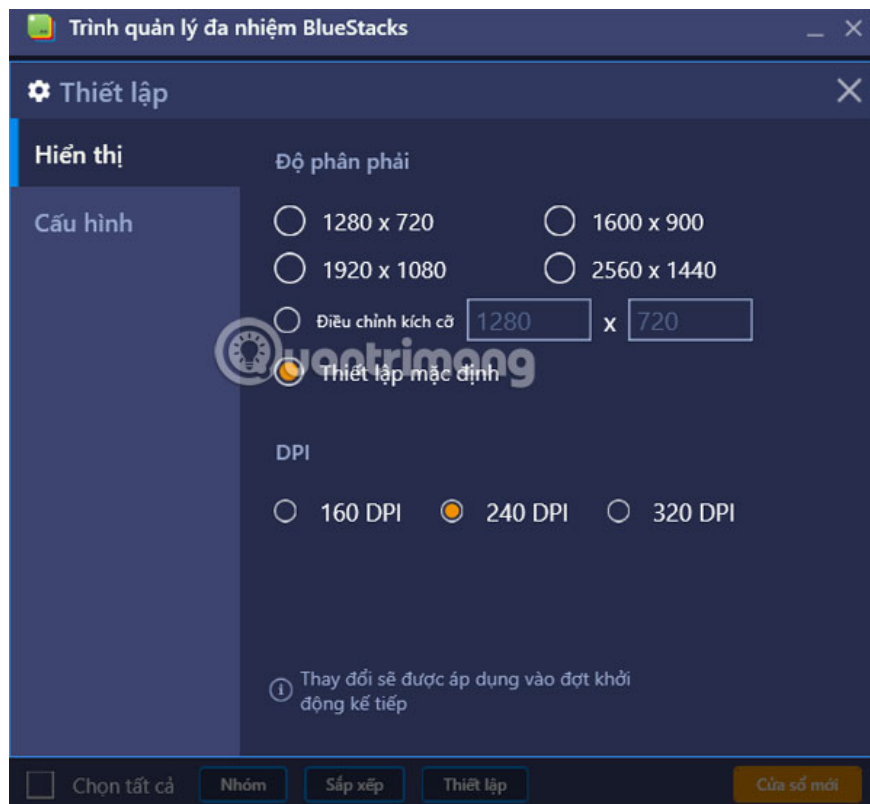

With the **new Tab with the application** , the BlueStacks window will be added to the application you downloaded earlier.

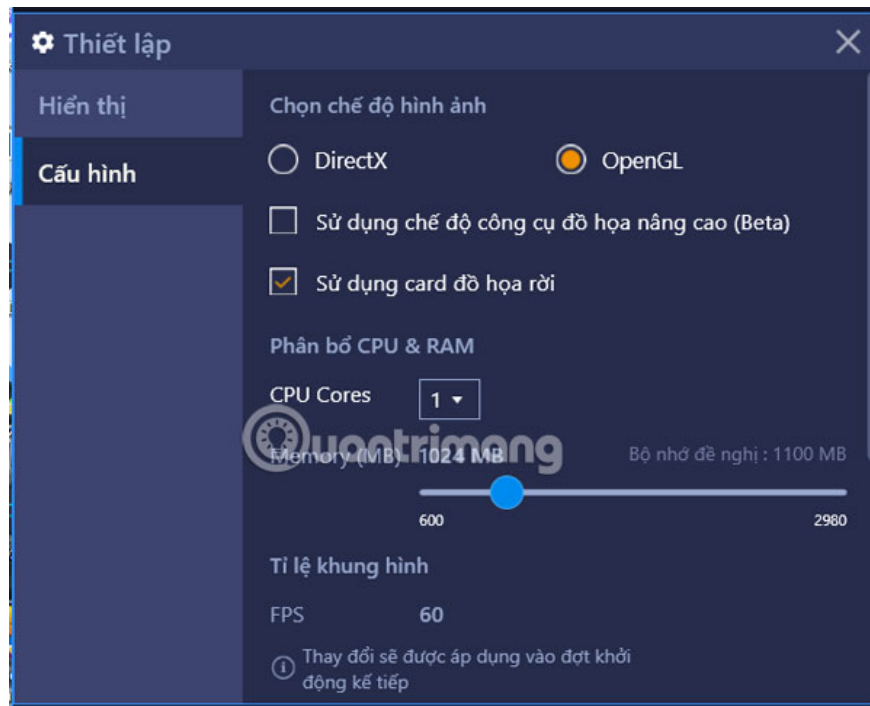

After adding new BlueStacks window, you can rename the newly added emulator window by clicking on the pen icon as shown below. Then write the name and press **Enter** to save.

To set up the configuration of the new BlueStacks window, click the jag icon after the **Start** word to set up a new window. Here you can choose options such as Resolution, pixel density.

The configuration section will give you settings like image mode selection, CPU allocation and RAM activity for the newly added BlueStacks window.

When you open the BlueStacks window you cannot start two windows at the same time, you have to wait for the initial window to finish loading, open the next window.

This is through the instructions to open multiple BlueStacks windows on the computer at the same time, with multiple BlueStacks windows opened at the same time. You can open multiple applications at the same time or open multiple games at the same time to battle.
