

How to pair music, insert music into videos on Android phones, iPhones

You have a good, beautiful video clip, but the sound of that video is noisy, contains many strange noises. Now you want to add another soundtrack instead of the video. TipsMake.com will guide you in detail How to combine music, insert music into videos on phones both Android and iPhone operating systems.

You have a good, beautiful video clip, but the sound of that video is noisy, contains many strange noises. Now you want to add another soundtrack instead of video but don't know which software to use and how to do it. In this article, TipsMake.com will guide you in detail How to combine music, insert music into videos on phones both Android and iPhone operating systems.

Step 1 : The software that *TipsMake.com* uses in this article is called VideoShow. Download the app to your phone at:

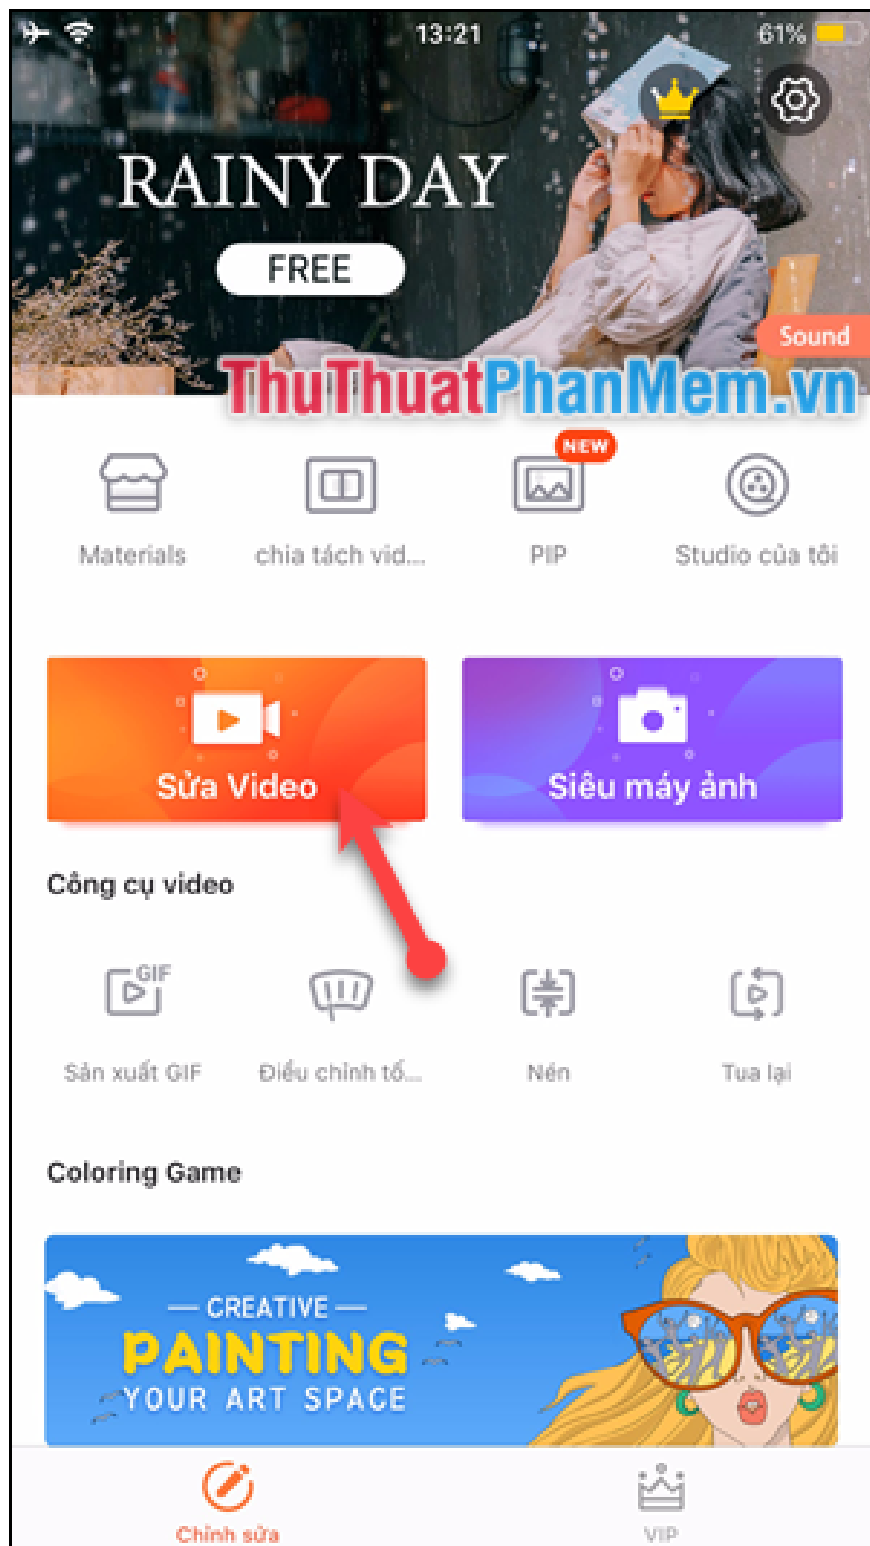

Android: <https://play.google.com/store/apps/details?id=com.xvideostudio.videoeditor&hl=en>

IOS: <https://apps.apple.com/en/app/videoshow-video-editor/id930380089>

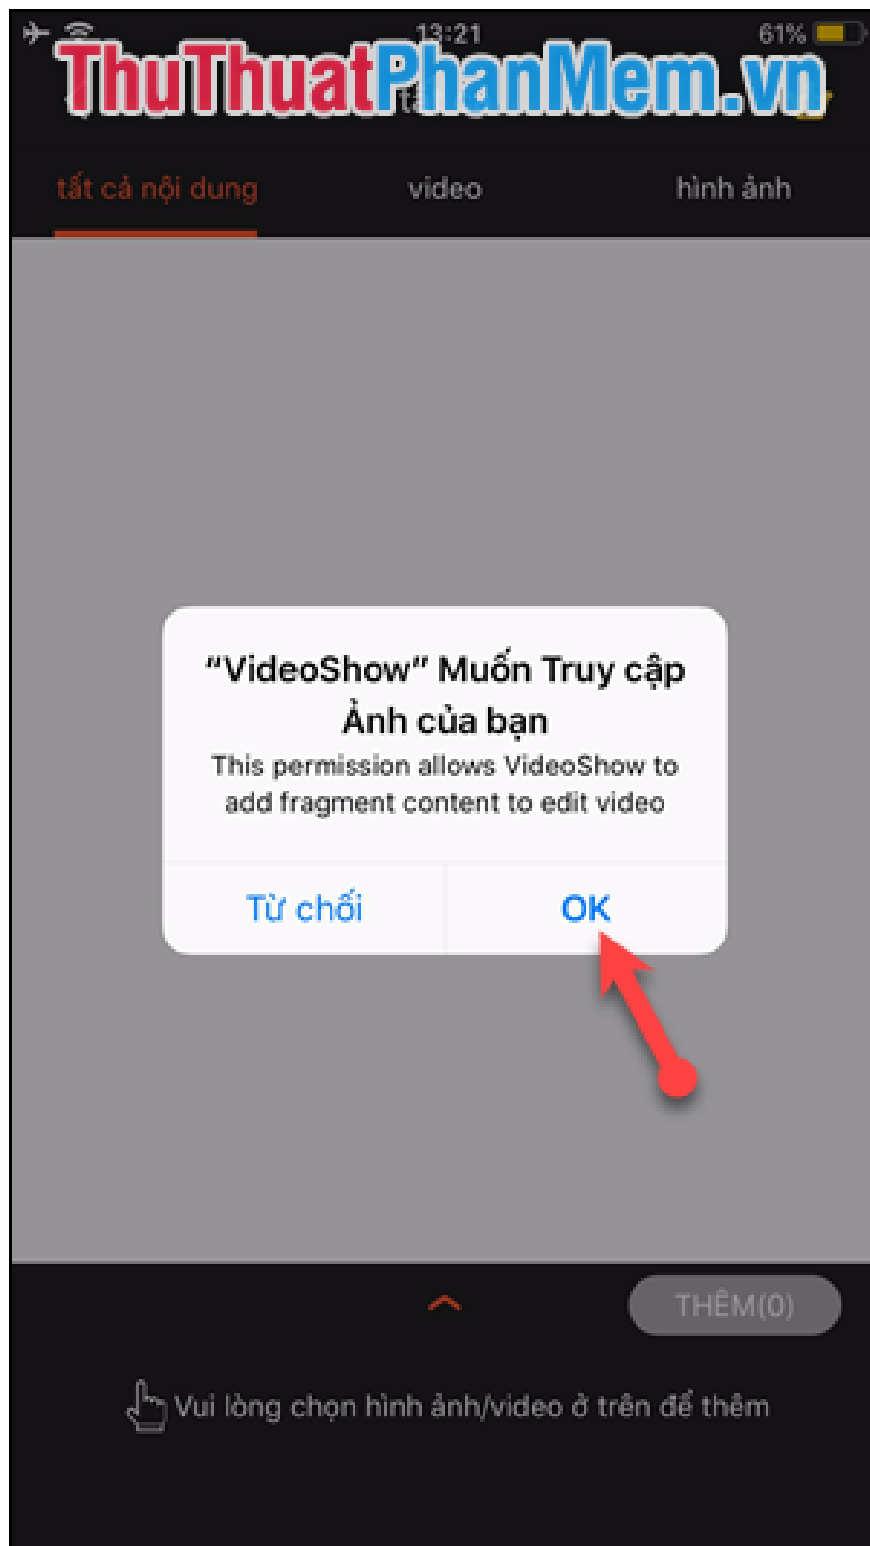

Step 2 : After the installation is completed, open the application. Set the introduction to the left then select **Start** to start using.

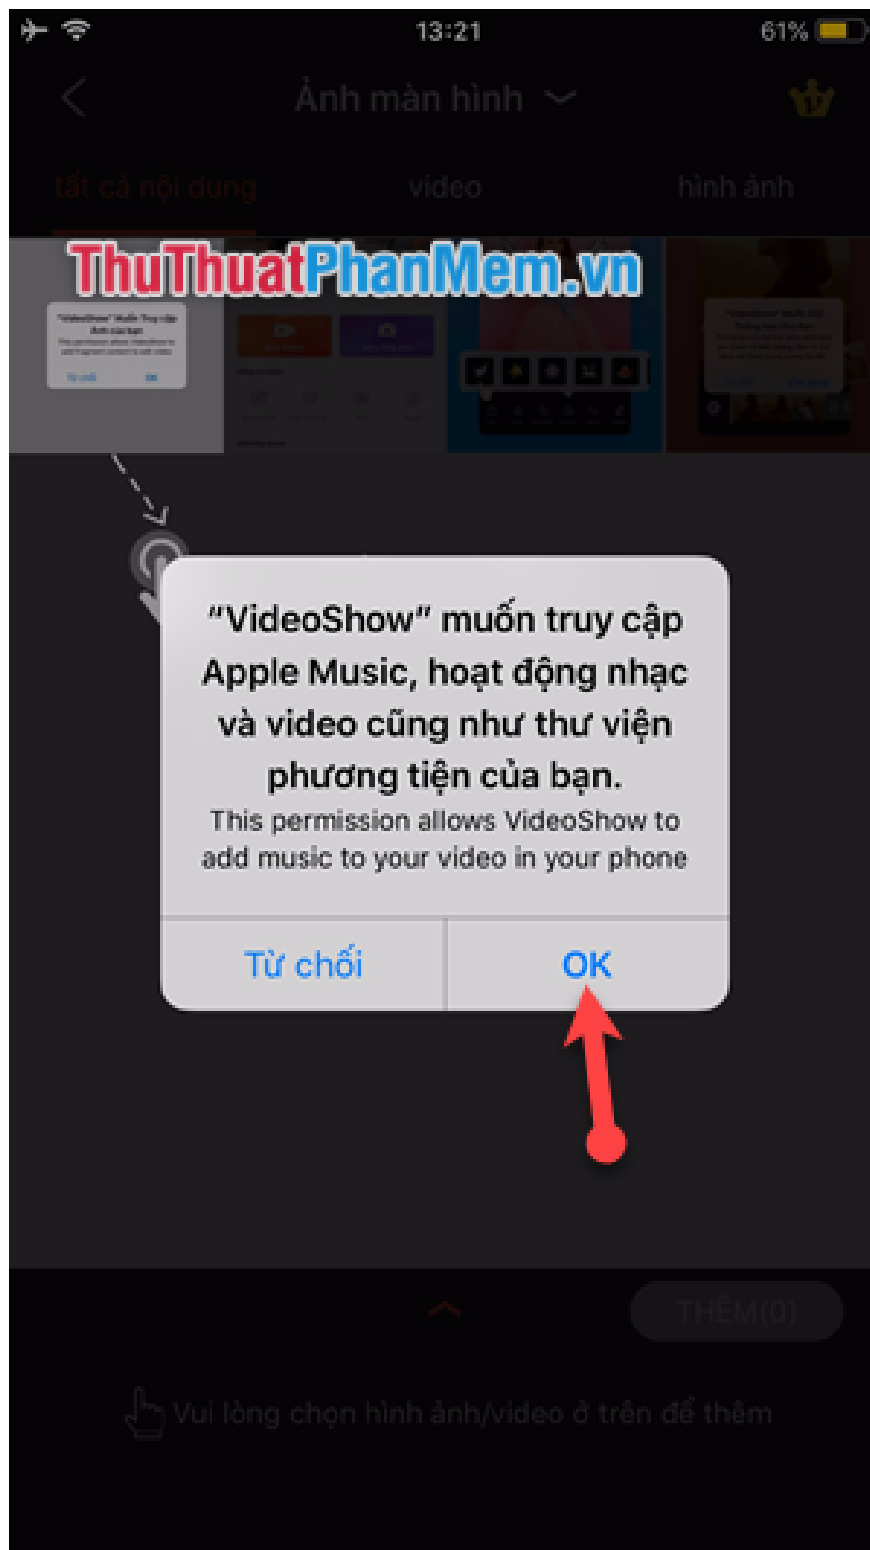

Step 3 : Select *Edit Video* .

Step 4 : Select **OK** to grant access to photos and videos.

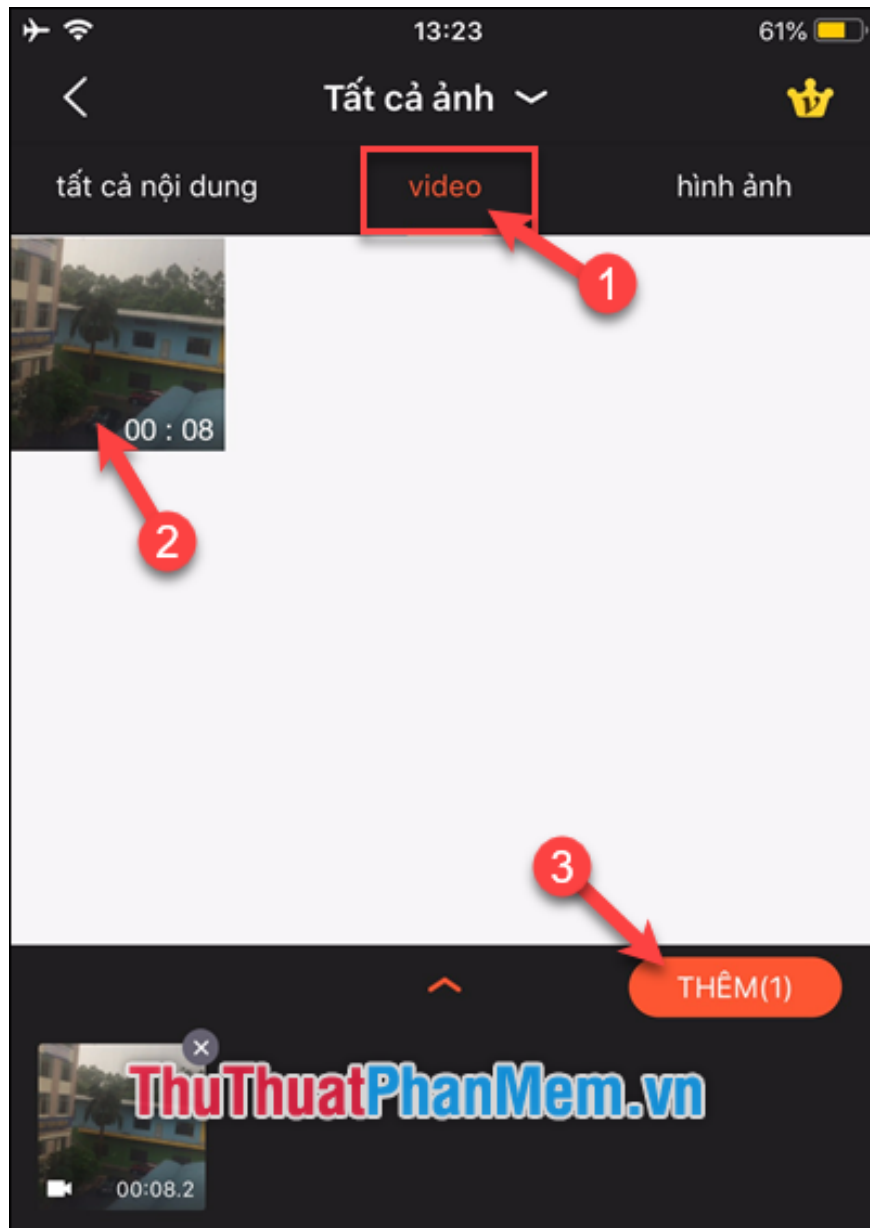

Step 5 : Click *OK* to grant access to Apple Music and audio media.

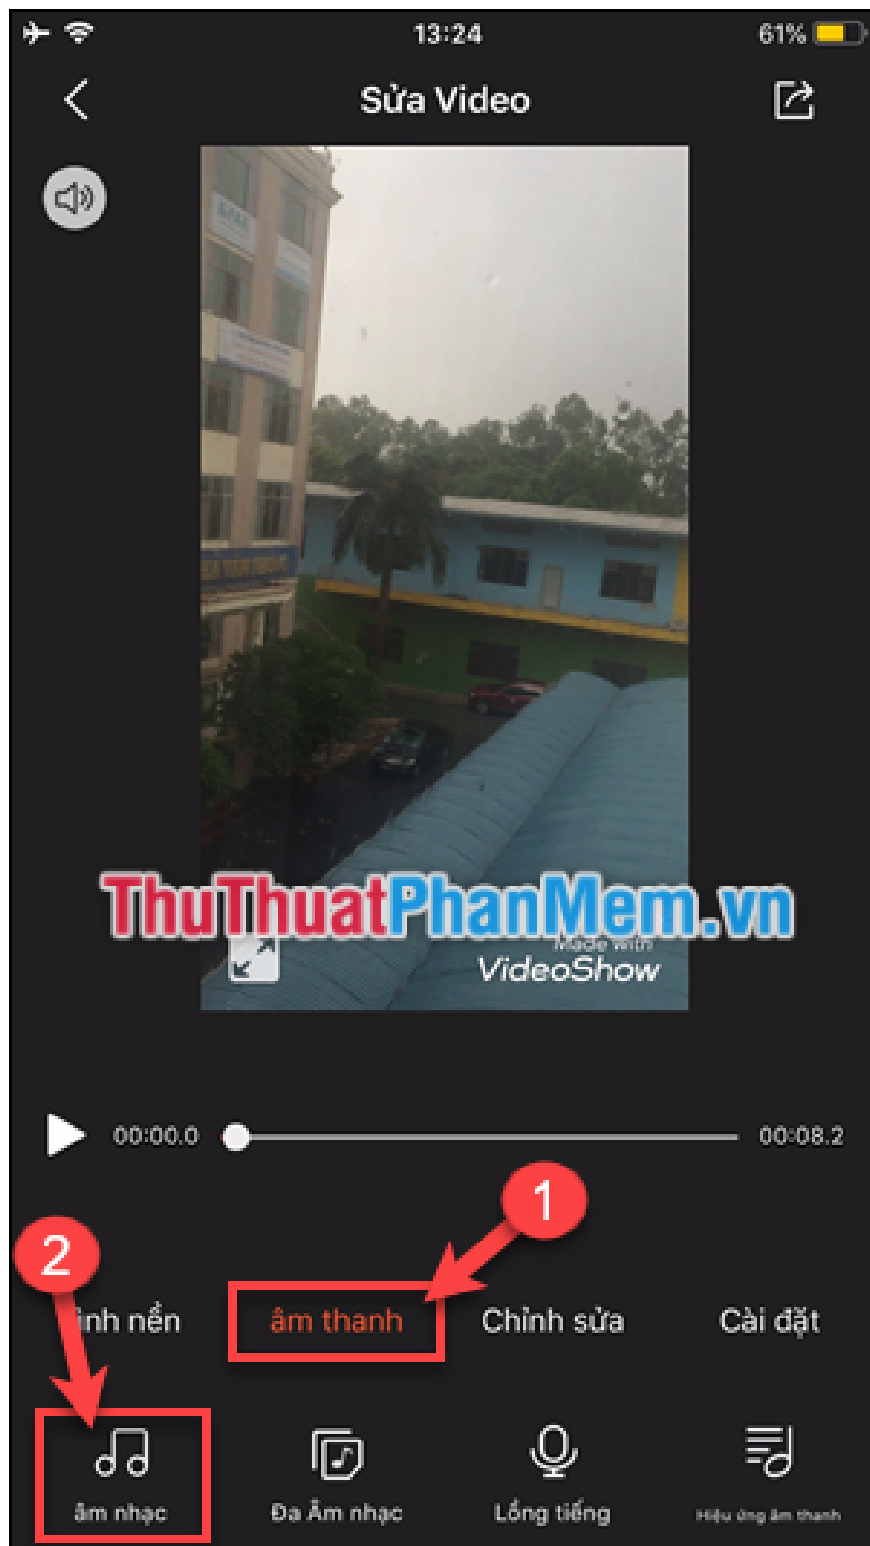

Step 6 : Here you perform the following operations:

- (1) Select to **Video** item .
- (2) Select the Video you want to pair with.
- (3) Then select **Add** .

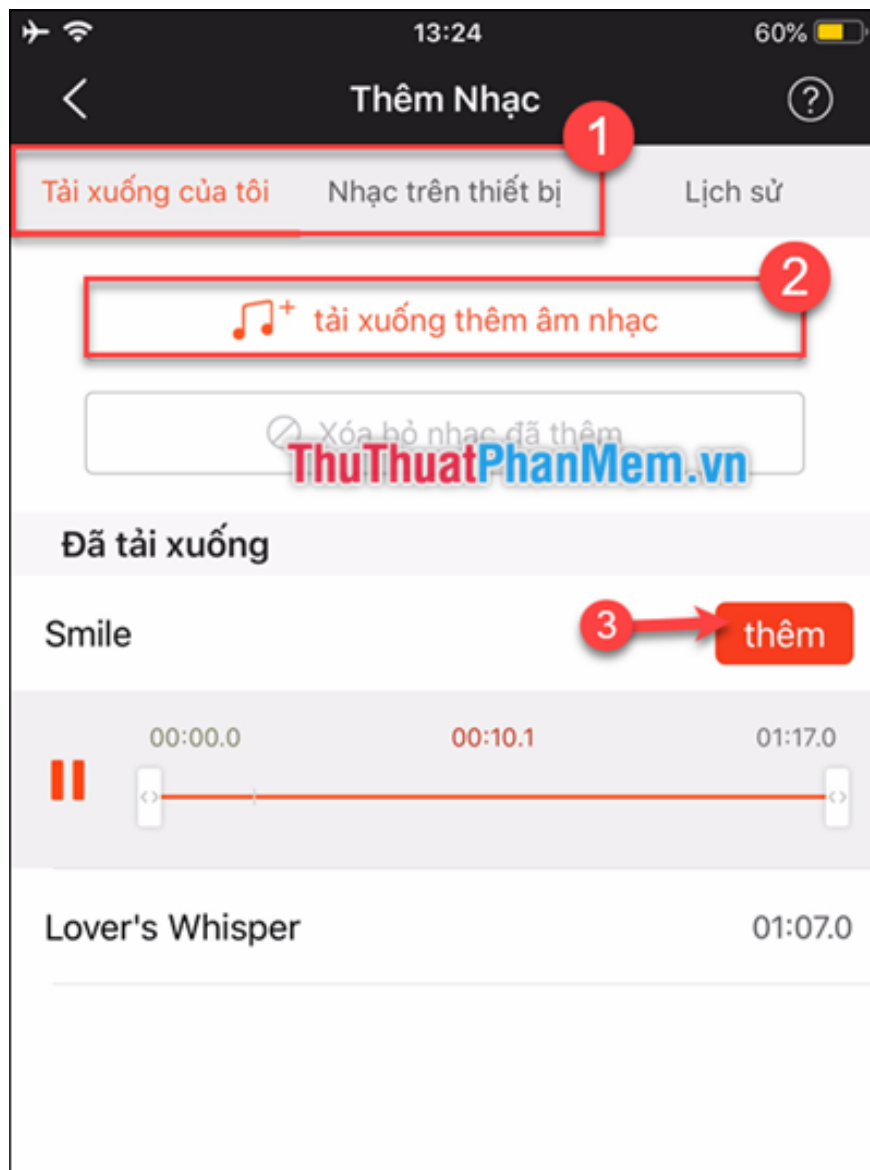

Step 7 : Then you choose to tab *sound* -> and then select the *music* c.

Step 8 : Here you can choose the downloaded music or the sound available on your device (1).

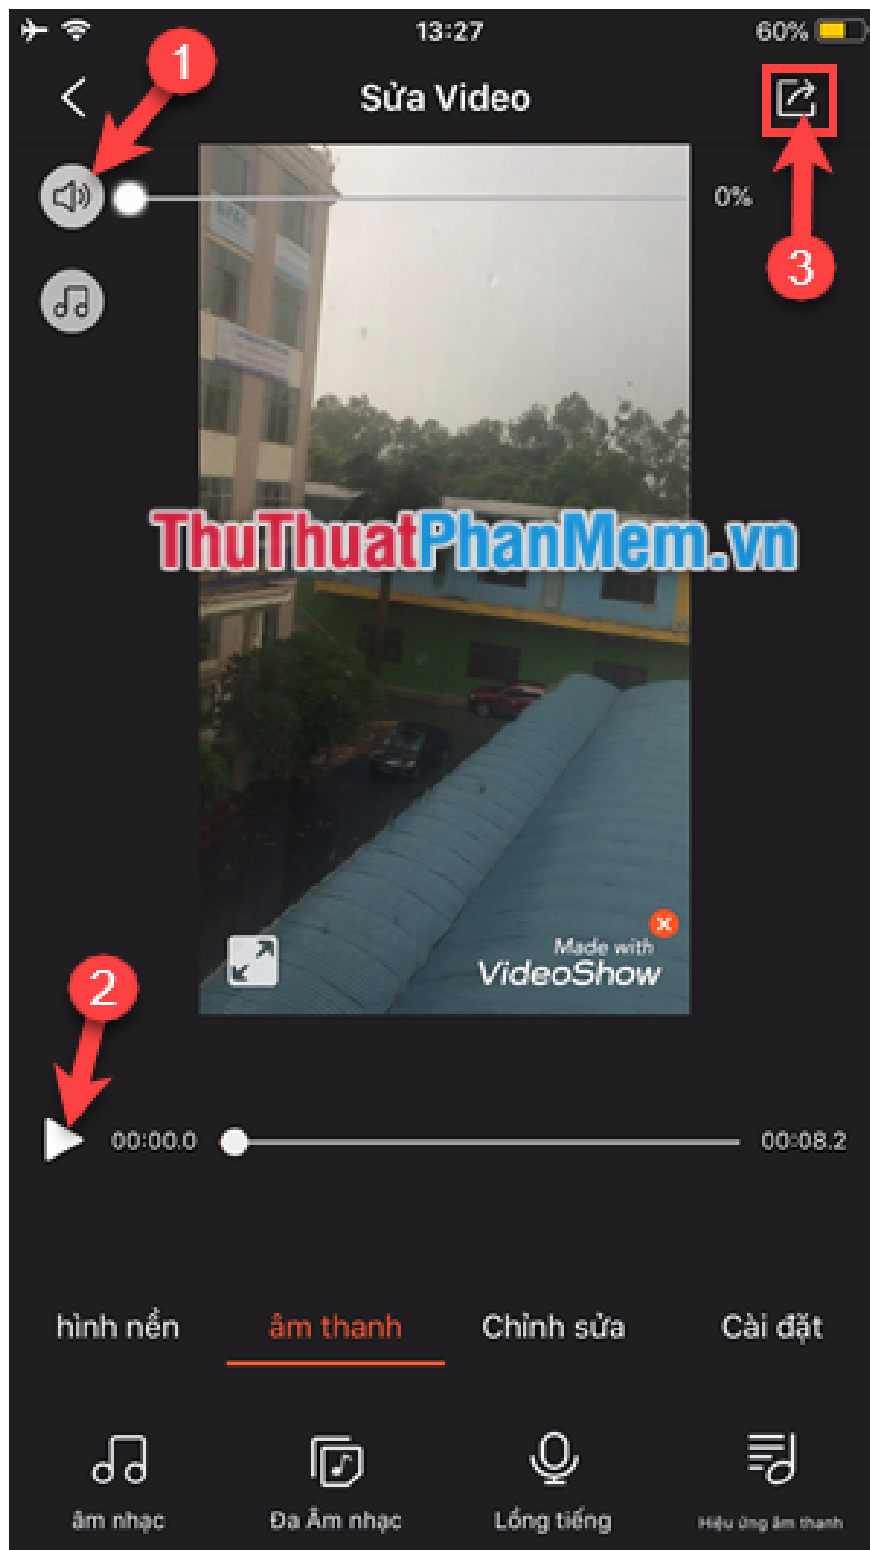

Alternatively, access the application's suggested sound bar (2).

After selecting the song and sound suitable, click **Add** (3) You can also choose the time to start the music at this step.

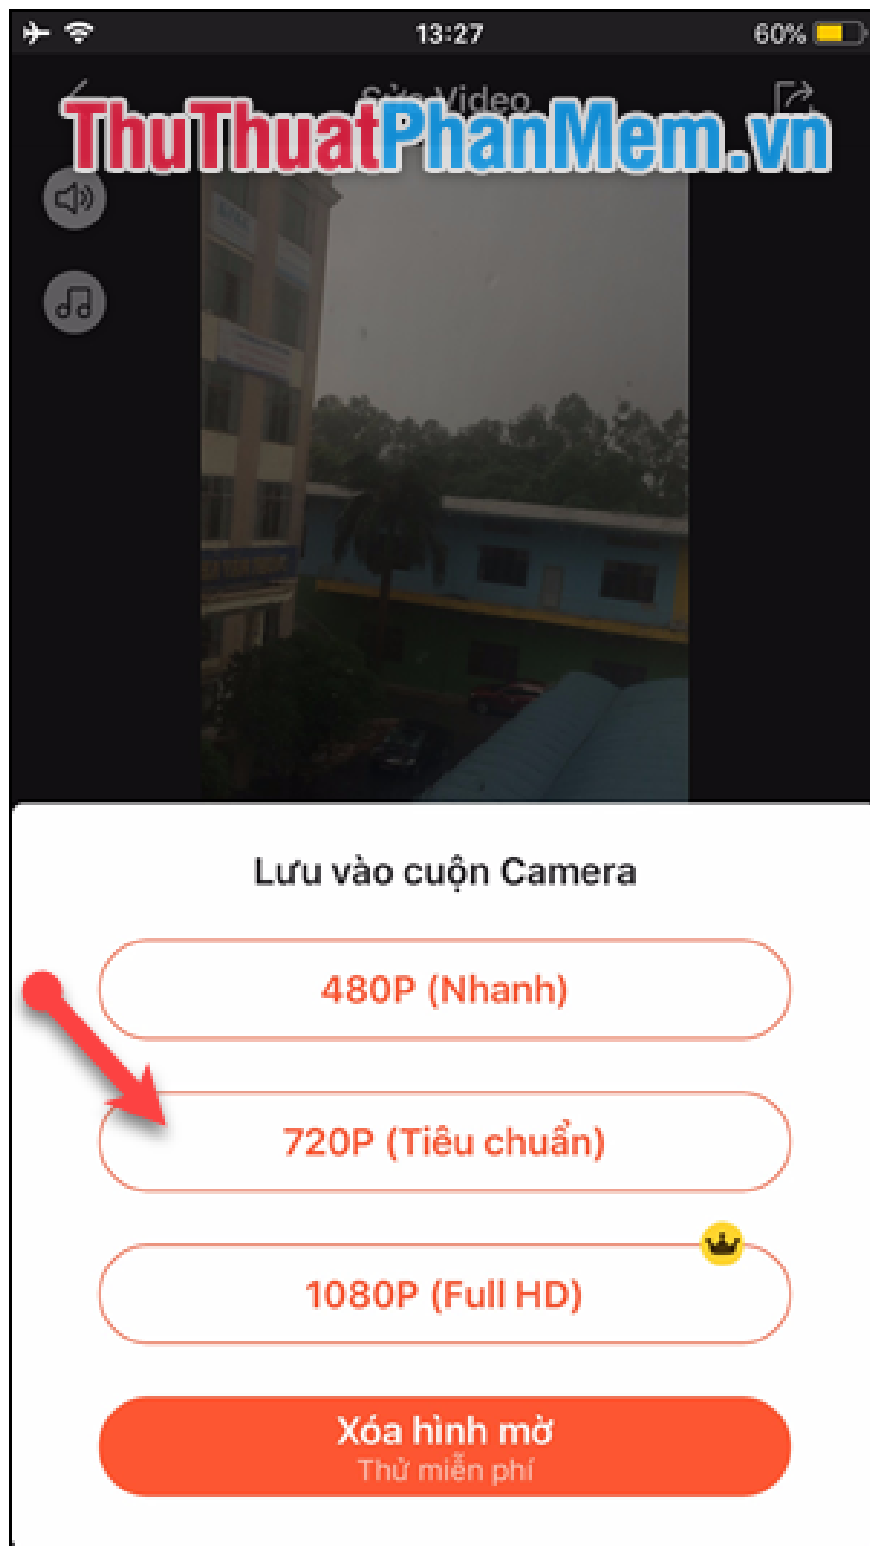

Step 9 : Then the software will return to the interface of the video.

- (1) Click on the sound icons at the top and drag them down to 0%. This is the original audio of the Video.
- (2) You can then click Play to preview your new video after you've merged the music.
- (3) Then press the Icon to export the video.

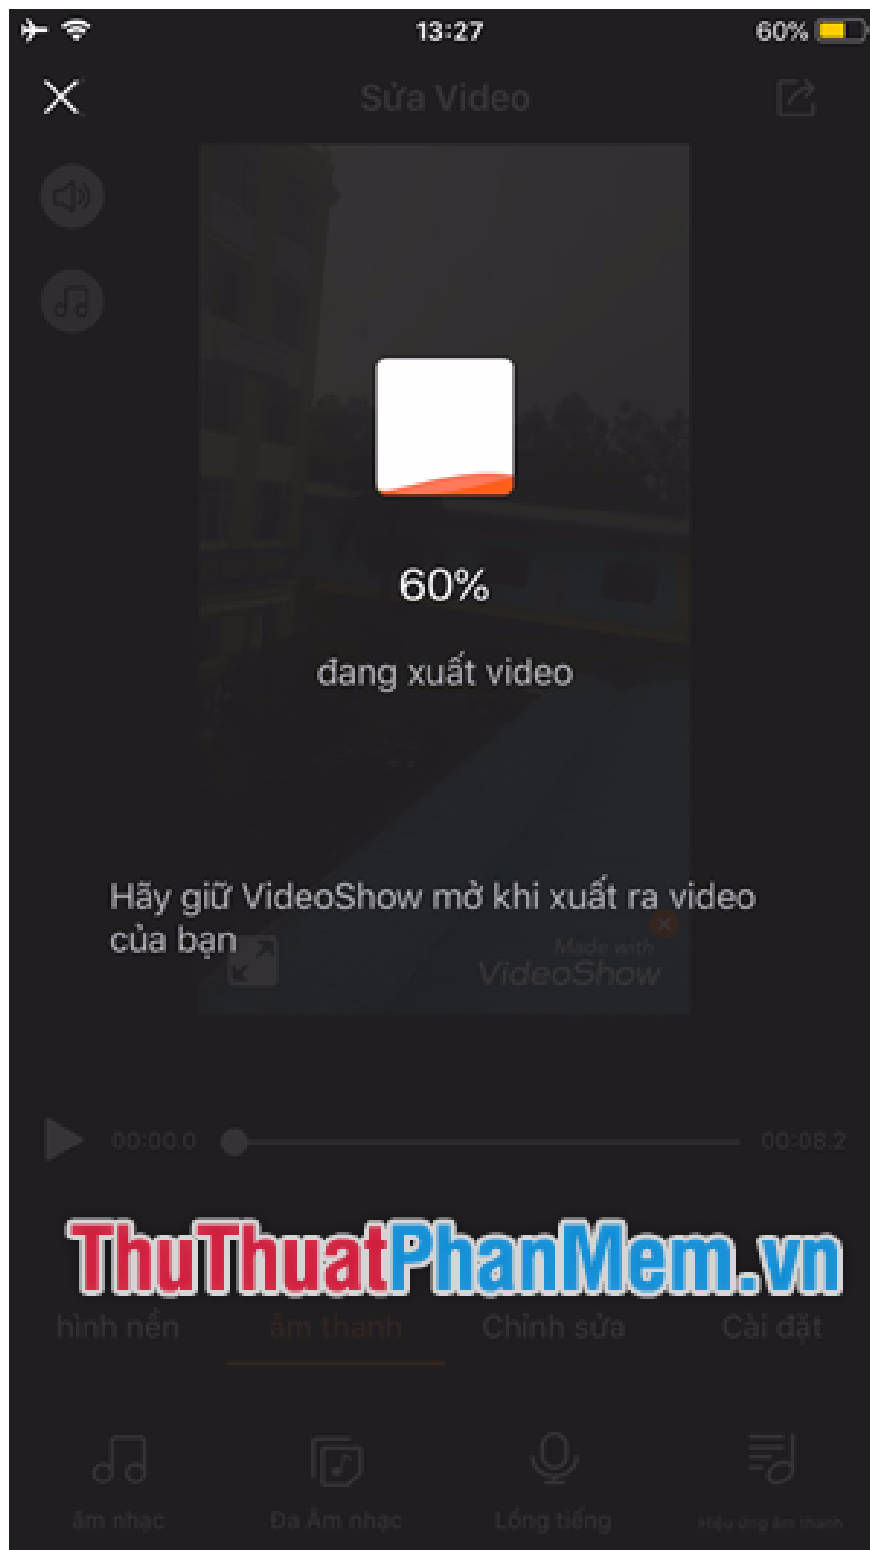

Step 10 : Here you select the output quality for the new Video. You can choose 720p resolution. Or sign up to buy an app to export videos in Full HD 1080p resolution.

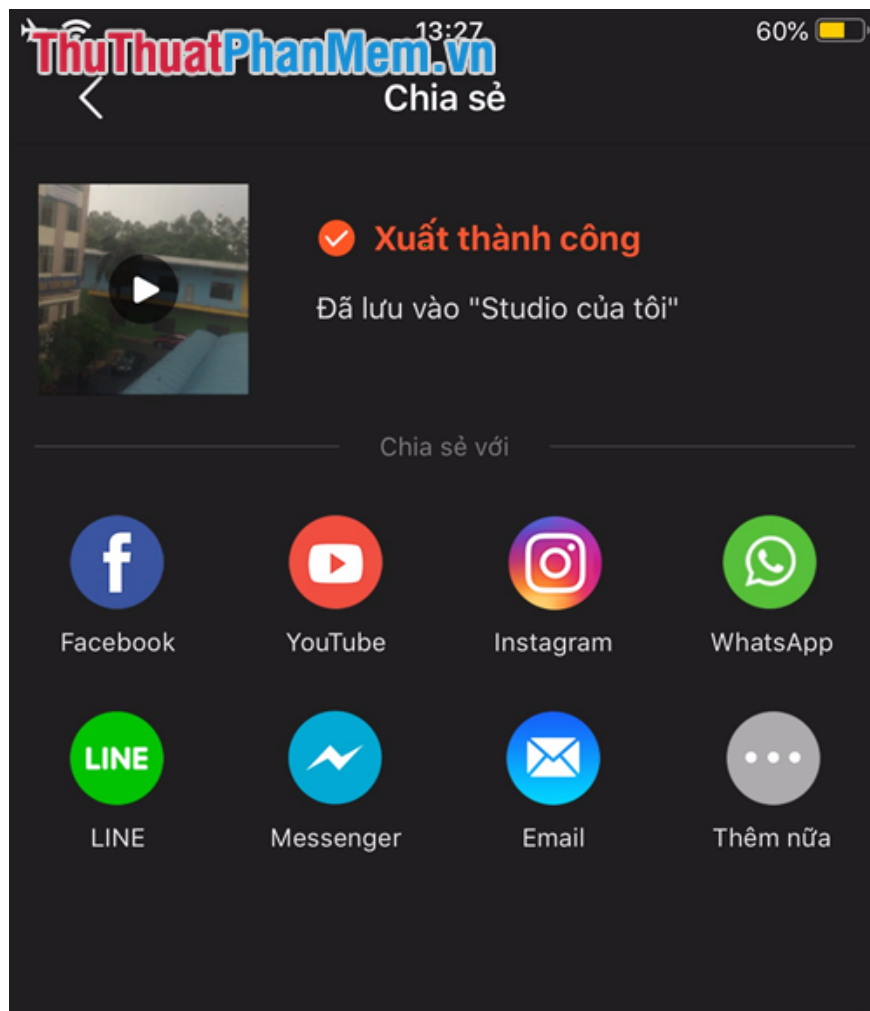

Please note, the length of the video as well as the output quality of the video you choose will affect the output speed of the application. If your Video is long and you choose high quality, the processing time will be longer and vice versa.

Step 11 : Immediately the application will process your video.

And notify you when done. The video will be automatically saved in the device's memory.

So, it is done to insert and merge music into the video on the phone already. Very simple, right. Thank you for following the article. I wish you successful implementation!
