

How to play PC games on Smart TV?

Both Android and Samsung TVs now allow you to play PC games on your smart TV via the free Steam Link app. The following article will show you how you can play PC games on Smart TV.

Both Android and Samsung TVs now allow you to play PC games on your smart TV via the free Steam Link app. The following article will show you how you can play PC games on Smart TV.

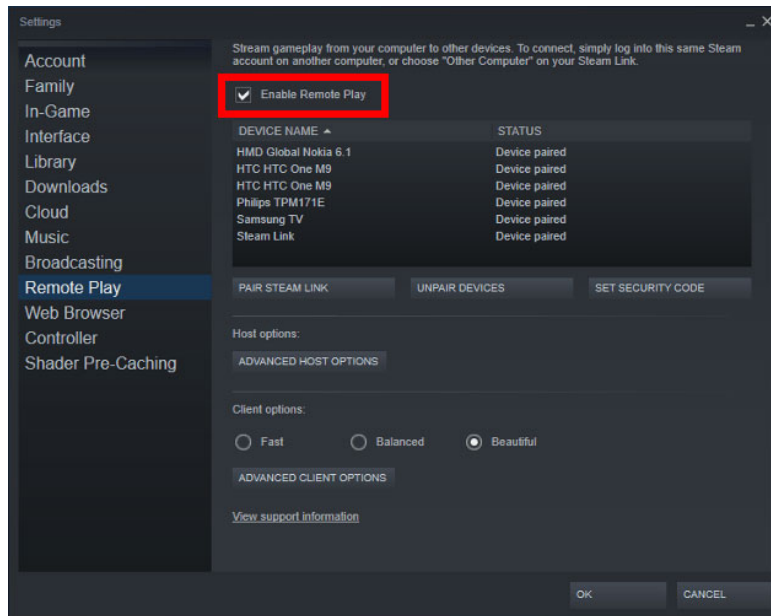

Note:

For best performance, you should connect both your main PC and TV to the Internet via an Ethernet cable. Or not, you should consider a Powerline Adapter, which provides a more stable connection than WiFi.

You can also use this method to play non-Steam games (and even emulated game consoles) by adding them to the Steam library.

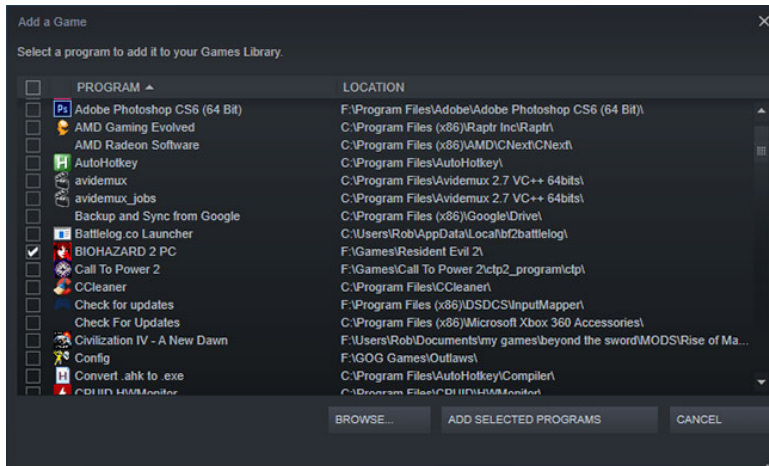

Activate Remote Play and Steam Link

First, make sure **Remote Play** is enabled on the PC you want to stream the game to. Open **Steam** on that PC, click **Steam> Settings> Remote Play** and make sure the **Enable Remote Play** box is selected.

Check Enable Remote Play

At this point, if there are any non-Steam games you want to play on TV, add them to Steam by clicking **Add a Game** in the lower left corner and selecting **Add a Non-Steam Game** . Select all the games you want to add, then click **Add Selected Programs** .

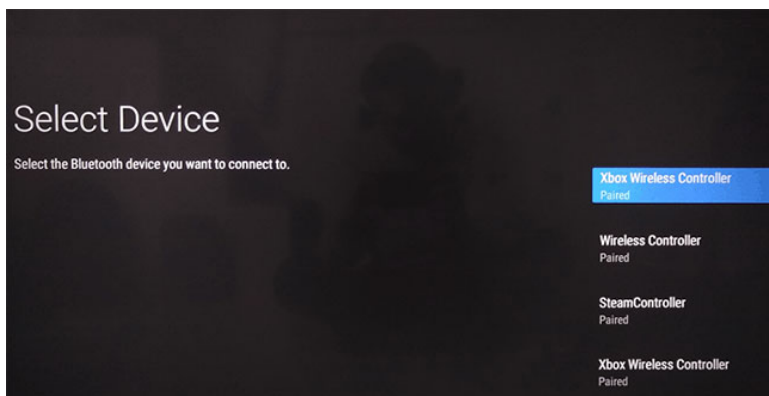

You can add any non-Steam game

Next, download the Steam Link app on the TV. If you have an Android TV, download the Steam Link app here. On Samsung TVs, you'll find the Steam Link app in the Samsung Smart Hub.

Connect the handle to the TV

Connect the handle via Bluetooth

Now it's time to connect the gamepad to the TV. Most TVs have Bluetooth and you can access the **Settings** section of the TV, find the **Bluetooth** option, then search for the handle. The gaming controller needs to be in pairing mode so that the TV can find it.

Connect the handle via Bluetooth

1. To put the Xbox 360 / One controller into pairing mode, press the **Xbox** button so it quickly flashes, then hold the pairing button at the top of the handle until the **Xbox** button light starts to blink faster. .

2. To put the PS4 controller into pairing mode, press and hold the **PlayStation** and **Share** buttons on the controller until the Light Bar starts to blink quickly.

The handle will be detected on the TV screen. Select it by the remote control and it will connect to the TV.

Connect the handle the other way

If the TV does not have Bluetooth, an alternative solution is to plug the handle into the TV with a USB cable. Or, if you really want to install wirelessly, you can choose a wireless dongle like 8Bitdo Bluetooth Adapter, plug it into the back of the TV and then transmit the Bluetooth signal to your controller.

When the PC is turned on, Remote Play is activated and the controller is connected, now you can access the Steam Link app on your smart TV and play PC games. If game quality or performance matters, consider reducing the **Quality** setting from **Beautiful** to **Balanced** or **Fast** in the Steam Link app on TV.
